List of acronyms

Acronym	Term
AFFF	Aqueous film-forming foam
AHD	Australian Height Datum
AS/NZS	Australian Standards/ New Zealand Standards
CoC	Chain of Custody
CSM	Conceptual Site Model
DCMM	Defence Contamination Management Manual
Defence	Department of Defence
DO	Dissolved oxygen
DQIs	Data Quality Indicators
DWER	Department of Water and Environmental Regulation
EC	Electrical Conductivity
ERA	Ecological Risk Assessment
HDPE	High-density Polyethylene
HEPA	Heads of EPA
HMAS	His Majesty's Australian Ship
LCS	Laboratory control sample
LOR	Limit of reporting
MW	Monitoring Well
NEMP	National Environmental Management Plan Version 3.0
NEPM	National Environment Protection Measure
NPUG	non-potable use of groundwater
OMP	Ongoing Monitoring Plan
OMR	Ongoing Monitoring Report
ORP	Oxidation reduction potential
PFAS	Per- and poly-fluoroalkyl substances
PFHxS	Perfluorohexane sulfonic acid
PFOA	Perfluorooctanoic acid
PFOS	Perfluorooctane sulfonic acid
PMAP	PFAS Management Area Plan
QA/QC	Quality Assurance and Quality Control
RPD	Relative percentage difference
SAQP	Sampling Analysis and Quality Plan

Acronym	Term
SW	Surface Water
TDS	Total Dissolved Solids
WA	Western Australia

List of units

Units	Term
%	Percentage
°C	Degrees Celsius
µg/L	Micrograms per Litre
µS/cm	Micro Siemens per Centimetre
g	Grams
km	Kilometre
L	Litre
m	Metre
mg/kg	Milligrams per Kilogram
mm	Millimetre
mV	Millivolt
pH	Potential of Hydrogen

1. Introduction

GHD Pty Ltd (GHD) has been engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) at His Majesty's Australian Ship (HMAS) Stirling (hereafter referred to as the 'base') in Western Australia (WA). The location of the base, the surrounding PFAS Management Area and key base features are shown in Figure 1 and Figure 2 in Appendix A

The OMP (RPS, 2018a) and its associated Sampling Analysis and Quality Plan (SAQP, GHD 2025) outlines the rationale and scope for the monitoring of the concentrations and extent of PFAS in groundwater, surface water, sediment and porewater at the base and within the Management Area. Monitoring is undertaken on a quarterly basis including March, June, September and December sampling events. This Sampling Event Factual Report documents the results of the December 2024 sampling event.

1.1 Objectives

The key objectives of the OMP are to evaluate:

– The spatial and temporal (including seasonal) nature and extent of PFAS impact in the environment associated with site sources of PFAS derived from legacy use of aqueous film-forming foam (AFFF);
– Changes to the Conceptual Site Model (CSM), which describes the current understanding of PFAS sources, transport pathways and receptors;
– Whether current risks to human and ecological receptors require review;
– The influence that risk management activities at the base, as outlined in the PFAS Management Area Plan (PMAP) (Department of Defence, 2021) have had on PFAS in the environment; and
– Whether any identified changes trigger an action and/or review.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PMAP (Department of Defence, 2021).

1.2 Purpose of this report

This Sampling Event Factual Report documents the results of the December 2024 Quarterly Sampling Event, specifically highlighting first-time detections and/or new exceedances of human health or ecological screening criteria for the sum of Perfluorooctane sulfonic acid (PFOS) and Perfluorohexane sulfonic acid (PFHxS) (herein referred to as PFOS+PFHxS), PFOS and/or Perfluorooctanoic acid (PFOA).

An Ongoing Monitoring Report (OMR) will be prepared following the completion of each 12-month sampling period.

This report has been prepared in accordance with the Defence *Ongoing Monitoring Program Reporting Guidance* issued in February 2024 (Department of Defence, 2024).

2. Scope of work

The scope of work was completed with reference to the GHD (2025) SAQP, as follows:

- Organised fieldwork and obtain approval for base access to monitoring locations.
- Collection of samples and field parameters at 63 scheduled groundwater locations, 39 porewater locations, 28 surface water locations and 39 sediment locations (refer to Table 1 and Table 2 below and Figure 3 to Figure 7 in Appendix A for specific locations).
- Collection of samples for quality assurance and quality control (QA/QC)
- Analysis of samples for PFAS suite at a limit of reporting (LOR) nominated in the SAQP.
- Data management of the OMP field and laboratory data in the Defence ESdat database.
- Preparation of this Sampling Event Factual Report for the December 2024 Quarterly Sampling Event.

2.1 Sampling locations

2.1.1 Groundwater monitoring locations

The groundwater monitoring locations monitored as part of the OMP are presented in Table 1 and are shown in Figure 3 to Figure 7 in Appendix A.

Table 1 OMP groundwater monitoring locations

Area (and Figure ref.)	Monitoring Well / Bore ID
Fire Training Area (Figure 3)	MW109, MW112, MW500, MW120, MW121, MW123, MW124, MW125, MW126, MW127 and MW128
Demolition Ground (Figure 4)	MW139, MW141, MW142, MW147 and MW149
WWTP (Figure 5)	MW158, MW161, MW166, MW171, MW173, MW193, MW195D, MW195S, MW196, MW199, MW200, MW202, MW203 and MW468
Helicopter Support Facility (Figure 6)	MW214, MW215, MW216, MW217, MW220, MW224, MW225, MW226, MW227, MW228 and MW282
Accommodation Area (Figure 7)	MW288 and MW289
Dredged Sediments (Figure 7)	MW268 and MW269
AVCAT Storage and Fuel Farm (Figure 7)	MW233, MW236, MW238, MW239, MW240, MW242, MW243, MW245, MW249, MW496 and MW516
Fire Station, Flammable / Hazardous Goods and Waste Storage, Ship Sullage (Figure 7)	MW010, MW255, MW256, MW257, MW258, MW259 and MW553

2.1.2 Porewater, surface water and sediment monitoring locations

The porewater and sediment locations and the surface water monitoring locations are presented in Table 2 and are presented in Figure 3 to Figure 7 in Appendix A.

Table 2 OMP Surface water, porewater and sediment locations

Area (and Figure ref.)	Surface water sampling location ID	Sediment sampling location ID	Porewater sampling location ID
Fire Training Area (Figure 3)	SW130, SW132, SW134	SD335, SD340, SD341, SD362, SD363, SD364	PW335, PW340, PW341, PW362, PW363, PW364
Demolition Ground (Figure 4)	SW150, SW152, SW154, SW156	SD329, SD330, SD331, SD356, SD357, SD358	PW329, PW330, PW331, PW356, PW357, PW358

Area (and Figure ref.)	Surface water sampling location ID	Sediment sampling location ID	Porewater sampling location ID
WWTP (Figure 5)	SW305, SW353, SW370, SW371, SW372, SW373, SW382, SW383, SW384	SD304, SD345, SD350, SD351, SD352, SD367, SD368, SD369, SD380, SD381, SD401	PW304, PW345, PW350, PW351, PW352, PW367, PW368, PW369, PW380, PW381, PW401

Accommodation Area (Figure 7)	-	SD346	PW346
Dredged Sediments (Figure 7)	SW317, SW318, SW319	SD374, SD375, SD378	PW374, PW375, PW378

2.2 SAQP deviations

The Post Winter 2024 biannual sampling event was completed in general accordance with:

- The SAQP (GHD, 2025).
- GHD's health and safety protocols.
- GHD's standard operating procedures for field work, which have been developed in accordance with WA contaminated land guidance.

Deviations from the SAQP are outlined in Table 3.

Table 3 Summary of deviations from the OMP SAQP.

Location	Deviation	Comments
MW195S	Not sampled	Well blocked and unable to be sampled – no data collected.
MW202	Not sampled	Well could not be located – no data collected.
PW307, PW308, PW314, PW315 and PW316	Not sampled	These sampling locations are located south of the Helicopter Support Facility. Hard limestone and ground conditions prevented the pore water sampler to be driven into the ground to abstract porewater.
Demolition ground	Sampling completed in January	The demolition ground could not be accessed during the December mobilisation. Sampling was instead completed in January.

3. Methodology

3.1 Sampling methodology

The methodology used for the Post Winter 2024 biannual sampling event was completed in accordance with the SAQP (GHD, 2025) as outlined in the following sections.

3.1.1 Groundwater sampling methodology

Groundwater sampling methodology is outlined in Table 4.

Table 4 Groundwater sampling methodology

Activity	Details
Well Gauging	Monitoring wells were first gauged to allow subsequent correction of groundwater levels relative to Australian Height Datum (AHD) prior to groundwater sample collection. All depth measurements referenced the top of the well casing as an established datum.
Groundwater Physicochemical Parameters	The physicochemical parameters were recorded via a pre-calibrated water quality meter from HydraSleeves® or via a peristaltic pump. The following parameters were recorded: – pH. – electrical conductivity (EC). – oxidation reduction potential (ORP). – Dissolved oxygen (DO). – Temperature. – Total Dissolved Solids (TDS). The water quality meter was calibrated by the equipment supplier and daily readings of reference solutions ("bump tests") were completed to optimise the accuracy of the measurements taken.
Deployment and Retrieval of HydraSleeves®	In compliance with section 18 of the Heads of EPA National Environmental Management Plan 3.0 (HEPA NEMP), groundwater samples were collected using bore-dedicated polypropylene HydraSleeves®. The HydraSleeves® were installed and left in place for a minimum of 24 hours prior to retrieving for sample collection. Where monitoring well construction details were available, the HydraSleeves® were positioned to target the mid-section of the screened interval. Where construction details were not available, the HydraSleeves® were placed approximately 1 m from the base of the monitoring well. Samples were collected via continuous pull method at a rate allowing the water to pass through the check value into the sample sleeve. Samples were discharged immediately (to minimise changes in chemistry) via discharge tube. Following sampling, new HydraSleeves® were deployed in preparation for the next OMP monitoring event using the same string for consistency (same depth of sampling i.e. within screen depth). In the event that a monitoring well was found to contain a HydraSleeve® that belonged to another program, the HydraSleeve® was used for sampling (if it was in satisfactory condition) as outlined above, then replaced with a new HydraSleeve®.
Alternative sampling methodology (low flow micro-purge)	In the event the water column wasn't sufficient to fill the HydraSleeve®, the HydraSleeve® was deployed with a top weight and left in wells for a minimum of 24 hours to allow restabilisation of the well. During the December sampling event, this approach was applied at monitoring wells MW109, MW120, MW123, MW128, MW158, MW166, MW193, MW196, MW200, MW214, MW215, MW216, MW217, MW220, MW224, MW225, MW227, MW233, MW236, MW239, MW242, MW249, MW468 and MW553. If the HydraSleeve® was then retrieved with no or insufficient sample volume, low flow sampling occurred via a low flow micro-purge pump using the following methodology: – Post-gauging, each monitoring well was purged using a low flow micro-purge pump fitted with bore-dedicated inert silicone and High-density Polyethylene (HDPE) tubing. The upper end of the tubing was connected to the flow cell of a water quality meter positioned to prevent entrapment of oxygen.

Activity	Details
	– The pump intake was placed approximately 0.5 m below the top of screen (or at least 0.5 m below the top of the water column) to ensure collection of samples representative of groundwater quality beneath the base. – Measurement of water quality parameters was undertaken immediately after the flow cell was full and continued thereafter at two to five-minute intervals during the purging process. Field parameters including pH, DO, ORP, EC, TDS and temperature were measured and recorded on field data sheets during purging until stabilisation was achieved. – Purging was undertaken until stabilisation of field parameters was achieved after which the well was subsequently sampled. Parameters were considered stable when they are within the following range (where practicable within the time constraints of the program): • Temperature: +/- 0.02 °C • pH: +/- 0.05 • EC: +/- 3% • DO: +/- 10% • ORP: +/- 10 mV – Representative groundwater samples were collected directly from the HDPE tubing into laboratory supplied pre-preserved sample containers. During the December sampling event, the low flow pump method was used at monitoring well MW121.
Field Records	Field records included the following information: – Gauging data – Sampling time and date. – Weather conditions. – Sample collection method. Where a HydraSleeve® is used for sample collection, the target interval depth was recorded. – Stabilised field parameters. – Observations regarding water quality (e.g., turbidity, colour etc.) or obvious indicators of contamination (e.g., sheens). – Sampling equipment decontamination procedures where non-disposable sampling equipment is utilised. – Calibration and daily bump test records. – Well gauging records. All sample documentation including field notes, reporting records, Chain of Custody (CoC) and equipment calibration certificates and procedures were retained within project files.
Decontamination procedure	Dedicated HydraSleeves® and single use nitrile gloves were used at each groundwater bore thus preventing cross-contamination. Single use nitrile gloves were worn during sampling and appropriately disposed of between each sampling location. All re-usable sampling equipment was thoroughly washed using PFAS and phosphate-free detergent (mixed per supplier instructions) then double rinsed with laboratory-supplied rinsate water before the sample collection.
Sample identification, preservation transport and holding times	Each sample bottle was pre-labelled by the laboratory with a unique barcode which was scanned into a mobile application to generate the CoC. Samples were collected directly in appropriately preserved laboratory supplied bottles (Teflon-free) and packed in chilled containers for delivery to the laboratory under CoC documentation. Sample containers, preservation procedures, sample storage requirements and holding times were undertaken in accordance with those recommended by Standards Australia (AS/NZS 5667.1:1998).

3.1.2 Surface water sampling methodology

The methodology for the surface water monitoring is detailed in Table 5.

Table 5 Surface water sampling methodology

Item	Details
Physicochemical parameters	Surface water physiochemical parameters (i.e., pH, EC, ORP, DO, TDS and temperature) were recorded at the time of sampling using a pre-calibrated water quality meter. Field observations such as odours or sheen presence were also recorded on field sampling sheets.
Sampling Method	Where the embankment of the water body was stable and the water body could be safely accessed, surface water samples were collected by hand, directly into the laboratory supplied sample containers using a 'Grab' (manual) sample method. Where depth permits, the sample container was positioned at least 10 cm below the surface water level and above the sediment bed and oriented with the capped opening facing downwards to avoid the collection of surface films. Once in position, the container cap was removed to allow sample collection. Where sampling points could not be safely accessed, surface water samples were collected using a long-handled sampler and decanted into the laboratory supplied sample containers. Samples were collected in accordance with Australian/New Zealand Standards (AS/NZS 5667.1:1998) Water quality – Sampling – Guidance on the design of sampling programs, sampling techniques and the preservation and handling of samples.
Sample Collection	Water samples were placed directly into appropriately labelled, laboratory-supplied sample bottles and packed in chilled containers for delivery to the laboratory under Chain of Custody documentation.
Decontamination	Single use nitrile gloves were worn during sampling and appropriately disposed of between each sampling location. All re-usable sampling equipment was thoroughly washed using PFAS and phosphate-free detergent (mixed per supplier instructions) then double rinsed with laboratory-supplied rinsate water before the sample collection.
Sample identification, preservation, transport and holding times	Each sample container was pre-labelled by the laboratory with a unique barcode which was scanned into a mobile application to generate the Chain of Custody (CoC). Samples were contained in appropriately preserved laboratory supplied bottles (Teflon-free) and packed in chilled containers for delivery to the laboratory under CoC documentation. Sample containers, preservation procedures, sample storage requirements and holding times were undertaken in accordance with those recommended by Standards Australia (AS/NZS 5667.1:1998 as appropriate).
Field Records	Field records included the following information: – Sampling time and date. – Weather conditions. – Sample collection method. – Field parameters – Observations regarding water quality (e.g., turbidity, colour etc.) or obvious indicators of contamination (e.g., sheens). – Sampling equipment decontamination procedures where non-disposable sampling equipment was utilised. – Calibration and daily bump tests records. All sample documentation including field notebooks, reporting records, CoC and equipment calibration certificates and procedures were retained within project files.

3.1.3 Sediment sampling methodology

The methodology for sediment sampling is detailed in Table 6.

Table 6 Sediment sampling methodology

Item	Details
Sediment Sample Collection	Sediment samples were collected at the sediment/water interface using hand tools (e.g. trowel, hand auger, PVC pipe etc.) with samples placed directly into appropriately labelled, laboratory supplied sample containers and packed in chilled containers for delivery to the laboratory under Chain of Custody documentation.

Item	Details
	At each sampling location, the sediment sample was visually assessed and observations (including physical description) recorded on field data sheets.
Field Records	Field records included the following information: – Sampling time and date. – Weather conditions. – Sample collection method. – Observations regarding sediment quality (e.g., colour, grain size etc.) or obvious indicators of contamination (e.g., staining). – Sampling equipment decontamination procedures where non-disposable sampling equipment is utilised. All sample documentation including field notebooks, reporting records, CoC and equipment calibration certificates and procedures were retained within project files.
Decontamination	Single use nitrile gloves were worn during sampling and appropriately disposed of between each sampling location. All re-usable sampling equipment was thoroughly washed using PFAS and phosphate-free detergent (mixed per supplier instructions) then double rinsed with laboratory-supplied rinsate water before the sample collection.

3.1.4 Porewater sampling methodology

The methodology for porewater sampling is outlined in Table 7.

Table 7 Porewater sampling methodology

Item	Details
Porewater Sample Collection	Sampling was conducted using a reusable stainless steel piezometer which has a screened zone consisting of a series of very fine interlaced machined slots to allow porewater to enter the sampler. The sampling end of the piezometer was inserted into the surficial marine sediments to approximately 0.5 m below the surface. Once the target sample depth was reached, porewater was collected using a peristaltic pump fitted with bore-dedicated silicone and HDPE tubing into laboratory supplied bottles. Field parameters were recorded (pH, EC, TDS, redox, DO and temperature). Purging prior to sampling was not considered necessary due to the highly transmissive nature of the intertidal zone sediments. Field EC and/or TDS readings were used to assess whether the porewater sample is representative of discharging groundwater and not purely seawater.
Field Records	Field records included the following information: – Sampling time and date. – Weather conditions. – Sample collection method. – Field parameters – Observations regarding water quality (e.g., turbidity, colour etc.) or obvious indicators of contamination (e.g., sheens). – Sampling equipment decontamination procedures where non-disposable sampling equipment is utilised. All sample documentation including field notes, reporting records, COC and equipment calibration certificates and procedures were retained within project files.
Decontamination	Single use nitrile gloves were worn during sampling and appropriately disposed of between each sampling location. Tubing was replaced at each sampling location. All re-usable sampling equipment was thoroughly washed using PFAS and phosphate-free detergent (mixed per supplier instructions) then double rinsed with laboratory-supplied rinsate water before the sample collection.

3.2 Quality assurance and quality control

Quality assurance (QA) involves all the actions, procedures, checks and decisions, undertaken to ensure the representativeness and integrity of samples and accuracy and reliability of analytical results (NEPM, 2013). Quality control (QC) involves protocols to monitor and measure the effectiveness of QA procedures.

The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (GHD, 2025). A review of the field and laboratory QA/QC performance from the investigation is presented in the QA/QC data validation report, Appendix B. Key findings of the data validation report include:

– The majority of the calculated relative percentage difference (RPD) in concentrations for each duplicate pair, as presented in Tables B1 and B2 of Appendix B, were within acceptable limits. In most cases, RPD values greater than the acceptance criterion of 30% are considered reflective of the proximity of the reported concentrations to the LOR (i.e., less than 10 times the LOR). On this basis, the RPDs greater than 30% are considered to have minimal impact on the data quality.
– Field blank analytical results, as provided in Table B3 of Appendix B, were less than the LOR in all cases.
– Rinsate blank analytical results, as provided in Table B3 of Appendix B, were less than the LOR in all cases.
– Trip blank analytical results, as provided in Table B3 of Appendix B, were less than the LOR in all cases.

Overall, the QA/QC assessment concluded that the collected data is considered appropriate for the work undertaken and are considered usable for the purpose of this assessment.

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) requirements (Department of Defence, 2018).

4. Guideline values

A summary of the current PFAS guideline values for groundwater, surface water and porewater considered relevant to the base is presented as Table 8. The guideline values are largely based upon the PFAS NEMP (HEPA, 2025) which presents a consolidated set of health- and ecology-based Australian PFAS guideline values for soil and water that are derived from various guidelines and publications. It is noted that there are currently no Australian regulatory endorsed guideline values for risk posed to ecology or human health by PFAS in sediment.

Table 8 Relevant PFAS assessment guideline value

Exposure scenario	Source	Assessment guideline value		
		PFOS	PFOS+PFHxS	PFOA
Groundwater				
Health: potable use of groundwater	PFAS NEMP	0.07 µg/L	0.07 µg/L	0.56 µg/L
Health: domestic non-potable use of groundwater (NPUG)	DWER (2021)*	0.7 µg/L	0.7 µg/L	5.6 µg/L
Surface water and pore water				
Health: Recreational water use	PFAS NEMP	NE	2 µg/L	10 µg/L
Ecology: aquatic ecosystems (99% species protection)		0.00023 µg/L	NE	19 µg/L

Notes:

NE: not established

*Since completion of the Detailed Site Investigation (DSI) (RPS, 2018a) and development of the PMAP (Department of Defence, 2019), the WA DWER Assessment and Management of Contaminated Sites (DWER 2021) guideline has been updated and includes clear guidance regarding consideration of PFAS exposure risks from domestic non-potable use of groundwater (NPUG) by applying a factor of ten to the PFAS NEMP drinking water criteria. DWER (2021) also notes that the drinking water criteria should be adopted as screening criteria in situations where consumption of homegrown produce is a credible exposure pathway. While these exposure pathways are not considered credible pathways based on currently available information (refer to GHD, 2025) it is proposed to consider the criteria for completeness as part of implementation of the OMP and any subsequent studies.

It is important to note that an Ecological Risk Assessment (ERA) (RPS, 2018b)has been completed for the base to assess the potential risks to the environment associated with presence of PFAS within the Management Area. While the OMP will evaluate PFAS concentration data with reference to the ecology-based guideline values identified in Table 8, decision-making concerning changes to risks posed to ecological receptors of the Management Area will also be made with reference to the ERA conclusions and the dataset that informed it within the forthcoming OMR.

5. Field observations and results

5.1 General observations

The sampling event was completed over 12 days across December 2024 and January 2025. The weather conditions and general observations (including activities that may impact the monitoring program) recorded during the sampling event are summarised in Table 9.

Table 9 General field observations

Items	Observations
Weather Conditions	During the sampling event, the weather was observed to be mostly hot and dry, with maximum daily temperatures ranging from 22.7 ˚C (14 January 2025) and 34.6 ˚C (11 December). No rainfall was recorded during the sampling event. 0.6 mm of rainfall was recorded in the 48 hours prior to the sampling event. Information obtained from Garden Island HSF (Station ID 009256) (Bureau of Meteorology, 2025).
Estate Management Works, Training Activities and/or Construction Works.	None observed.

5.2 Field observations and measurements

The observations and measurements recorded during the field activities for the December quarterly sampling event are summarised in Table 10.

Table 10 Summary of field observations and measurements

Item	Description
Access and sample collection	Most sampling locations were accessible and able to be sampled. Some groundwater and porewater locations were unable to be sampled due to either blockages or field staff being unable to locate the well (refer to Table 3).
Water and sediment observations	Porewater was predominantly colourless and clear with a low to moderate sediment load, no odour and no sheen. Groundwater was predominantly colourless and clear with a low to moderate sediment load, no odour, and no sheen. A hydrocarbon odour was observed at MW126, MW199, MW200, MW245, MW516 and MW553 and MW199. MW128 was noted to have an organic odour. Surface water was observed to be clear and colourless. Sediment locations were observed to have either grey or yellow, fine to medium gained sand.
Groundwater flow direction	The calculated groundwater elevations (m AHD) are presented in Table C1 (Appendix C) and inferred groundwater flow directions are presented in Figures 3 to 7 (Appendix A). Groundwater depths recorded across the base's different areas during the December 2024 Quarterly Sampling Event are summarised below: **Demolition Ground** Groundwater mounded at MW147 and flowed in a north-westerly and south-easterly direction towards MW141 and MW149. **Wastewater Treatment Plant** Groundwater generally flowed in an easterly direction towards Cockburn Sound. **Helicopter Support Facility** Groundwater mounded at MW216 and MW217, and flowed predominantly in an easterly direction, and with moderate flow occurring to the south and west of MW216. **Main Base Layout** Groundwater flowed in a general south-easterly direction.

Item	Description
Physicochemical parameters	The recorded physicochemical parameters are presented in Tables C1, C2 and C3 in Appendix C and are summarised below: **Groundwater** – pH ranged from 6.73 (MW256) to 7.71 (MW257) indicating slightly acidic to slightly basic conditions. – EC ranged from 433.7 µS/cm (MW245) to 41,372 µS/cm (MW226) indicating freshwater to saline conditions. – DO ranged from 0.24 mg/L (MW199) to 5.69 mg/L (MW217) indicating poor to well oxygenated conditions. – ORP ranged from -263.4 mV (MW199) to -2.1 mV (MW282) indicating a reducing environment. – Temperature ranged from 19.7 ºC (MW233) to 27.3 ºC (MW195D). – TDS ranged from 282.6 mg/L (MW245) to 26,894 mg/L (MW226) indicating fresh to highly saline conditions. **Surface water** – pH ranged from 7.8 (SW310) to 8.21 (SW410) indicating slightly basic to basic conditions. – EC ranged from 52,210 µS/cm (SW317) to 57,186 µS/cm (SW150) indicating overall saline conditions. – DO ranged from 0.74 mg/L (SW318) to 5.20 mg/L (SW317) indicating both poor and well oxygenated conditions present. – ORP ranged from -162 mV (SW317) to -37.8mV (SW310) indicating a reducing environment. – Temperature ranged from 22.8 ºC (SW353) to 31.7 ºC (SW410). – TDS ranged from 33,928 mg/L (SW317) to 36,692mg/L (SW132) indicating highly saline to brine conditions. **Porewater** – pH ranged from 7.17 (PW368) to 7.99 (PW358) indicating slightly basic conditions. – EC ranged from 5,530 µS/cm (PW409) to 63,008 µS/cm (PW345) indicating freshwater to saline conditions. – DO ranged from 0.47 mg/L (PW357) to 172 mg/L (PW351) indicating both poor and very well oxygenated conditions present. – ORP ranged from -225.1 (PW367) to 174.3 (PW375) indicating both an oxidizing and reducing environment. – Temperature ranged from 22.1 ºC (PW401) to 29.7 ºC (PW407). – TDS ranged from 20,366 mg/L (PW346) to 40,972 mg/L (PW345) indicating highly saline to brine conditions. Field notes are presented in Appendix F.
Sediment observations	Sediment descriptions were recorded during the collection of sediment samples and are presented in Appendix F. Generally, the material was found to comprise grey and yellow, fine to medium grained, subangular SAND.

5.3 Summary of analytical results

The PFAS analytical results for groundwater, surface water, sediment and pore water from this sampling event are presented in Table C4 to C7 in Appendix C and are also summarised in Figure 8 to Figure 14 in Appendix A.

5.3.1 Groundwater

In summary, 77 groundwater samples (including primary, blind and split duplicate samples) were analysed for PFAS compounds, with:

– 62 samples reporting PFOS+PFHxS concentrations above the LOR.
– 40 samples reporting PFOS concentrations above the LOR.
– 35 samples reporting PFOA concentrations above the LOR.

– 48 samples reporting PFOS+PFHxS concentrations exceeding the potable use of groundwater guideline value and 31 samples reporting PFOS+PFHxS concentrations exceeding the non-potable use of groundwater guideline value.
– 31 samples reported PFOS concentrations exceeding the potable use of groundwater guideline value and 23 samples reporting PFOS concentrations exceeding the non-potable use of groundwater guideline value.
– Six samples reporting PFOA concentrations exceeding the potable use of groundwater guideline value.

A comparison of the historic groundwater data is summarised in Table 11.

Table 11 Deviations from historical dataset – groundwater analytical results

Item	Sample location	PFOS+PFHxS (µg/L)		PFOA (µg/L)		PFOS (µg/L)	
		Dec 2024	Previous Max	Dec 2024	Previous Max	Dec 2024	Previous Max
First time detections of PFOS+PFHxS, PFOS or PFOA?	MW127	0.02	<0.01	No first time detection		No first time detection	
New exceedance of human health guideline value?	MW217	1.11	0.49	0.57	0.43	1.05	0.4
New historical maximum	MW127	0.02	<0.01	No new maximum		No new maximum	
	MW171	No new maximum		No new maximum		2.55	2.19
	MW215	No new maximum		No new maximum		0.04	0.02
	MW217	1.11	0.49	0.57	0.43	1.05	0.4
	MW258	No new maximum		No new maximum		11.1	10
	MW268	0.82	0.8	No new maximum		No new maximum	
	MW269	No new maximum		0.03	0.02	No new maximum	
	MW496	No new maximum		No new maximum		8.18	8.16
	MW500	No new maximum		No new maximum		61.6	57.8
	MW553	0.06	0.01	No new maximum		No new maximum	

Notes:
N/A - not applicable.

5.3.2 Surface water

In summary, 38 surface water samples (including primary, blind and split duplicate samples) were analysed for PFAS compounds, with:

– Eight samples reporting PFOS+PFHxS concentrations above the LOR.
– Eight samples reporting PFOS concentrations above the LOR.
– No samples reporting PFOA concentrations above the LOR.
– No samples reported PFOS concentrations exceeding the adopted recreational human health guideline values for PFOS+PFHxS.
– All eight samples that reported PFOS concentrations above the LOR, the reported PFOS concentration exceeded the adopted ecological guideline value, noting that the LOR applied exceeds the guideline value. It cannot be determined whether PFOS concentrations reported below the LOR exceed the adopted ecological guideline value.
– No samples reported PFOA concentrations exceeding the adopted recreational human health or adopted ecological screening guideline values.

A comparison of the historical surface water data was conducted and no material deviations from the historical dataset were noted.

5.3.3 Sediment

In summary, 50 sediment samples (including primary, blind and split duplicate samples) were analysed for PFAS compounds, with:

- Two samples reporting PFOS+PFHxS concentrations above the LOR.
- Two samples reporting PFOS concentrations above the LOR.
- No samples reporting PFOA concentrations above the LOR.

A comparison of the historical sediment data was conducted and no material deviations from the historical dataset were noted.

5.3.4 Porewater

In summary 46 porewater samples (including primary, blind and split duplicate samples) were analysed for PFAS compounds, with:

- 21 samples reporting PFOS+PFHxS concentrations above the LOR.
- 20 samples reporting PFOS concentrations above the LOR.
- Two samples reporting PFOA concentrations above the LOR.
- No samples reporting PFOS+PFHxS concentrations exceeding the adopted recreational human health guideline values.
- In all 20 samples that reported PFOS concentrations above the LOR, the reported PFOS concentration exceeded the adopted ecological guideline value, noting that the LOR applied exceeds the guideline value. It cannot be determined whether PFOS concentrations reported below the LOR exceed the adopted ecological guideline value.
- No samples reporting PFOA concentrations exceeding the adopted recreational human health or adopted ecological screening guidelines values.

A comparison of the historic porewater data is summarised in Table 12.

Table 12 Deviations from historical dataset – porewater analytical results

Item	Sample location	PFOS+PFHxS (µg/L)		PFOA (µg/L)		PFOS (µg/L)	
		Dec 2024 and Jan 2025	Previous Max	Dec 2024 and Jan 2025	Previous Max	Dec 2024 and Jan 2025	Previous Max
First time detections of PFOS+PFHxS, PFOS or PFOA?	PW405	No first-time detection		0.01	<0.01	No first-time detection	
New exceedance of human health guideline value?	N/A	No new exceedance		No new exceedance		No new exceedance	
New exceedance of ecological health guideline value?	N/A	No new exceedance		No new exceedance		No new exceedance	
New historical maximum	PW405	0.06	0.03	0.01	N/A	N/A	N/A

Notes:
N/A – not applicable.
NE - not established.

6. Summary and recommendations

6.1 Summary of monitoring event

The findings and recommended actions from the Post Winter 2024 sampling event are summarised in Table 13.

Table 13 Summary of sampling event

Item	Comment	Recommended Action
Access to sampling locations	All sampling locations were accessible apart from MW202 which could not be located by field staff during the sampling event.	The well has since been located and will be monitored as part of subsequent sampling events.
Location inaccessible, dry or blocked	-	-
Analytical results	77 groundwater samples were analysed. 38 surface water samples were analysed. 50 sediment samples were analysed. 46 porewater samples were analysed.	Locations will be sampled again during the next OMP sampling event. Data will be evaluated further within the context of the OMP objectives (refer to Section 1.1) as part of the forthcoming OMR.
First-time detections of PFOS+PFHxS, PFOS and/or PFOA	MW127 reported a first-time detection of PFOS+PFHxS. The recorded concentration (0.02 µg/L) was marginally above the LOR. PW405 reported a first-time detection of PFOA. No surface water or sediment locations reported first-time detections of PFOS+PFHxS, PFOS and/or PFOA.	
New exceedance of human health guideline value?	MW127, M171, MW215, MW217, MW258, MW268, MW269, MW496, MW500 and MW552 recorded new historical maximum results of PFOS+PFHxS, PFOA and/or PFOS. MW217 was the only location to report new exceedances of the adopted human health guideline values for PFOS+PFHxS, PFOA and PFOS. No surface water, sediment or porewater locations reported new exceedances of the adopted human health guideline values for PFOS+PFHxS, PFOS and/or PFOA.	
New exceedance of ecological health guideline value?	No surface water or porewater locations reported new exceedances of the adopted ecological guideline values for PFOS and/or PFOA.	

6.2 Upcoming sampling events

The next OMP sampling event is scheduled for March 2025.

6.3 Upcoming ongoing monitoring report

The next OMR is scheduled to be delivered in Q3 2025, covering data collected between October 2023 and January 2025.

Limitations

This report has been prepared by GHD for Department of Defence and may only be used and relied on by Department of Defence for the purpose agreed between GHD and Department of Defence as set out in Section 1.1of this report.

GHD otherwise disclaims responsibility to any person other than Department of Defence arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.

The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.

The opinions, conclusions and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.

The opinions, conclusions and any recommendations in this report are based on information obtained from, and testing undertaken at or in connection with, specific sample points. Site conditions at other parts of the site may be different from the site conditions found at the specific sample points.

Investigations undertaken in respect of this report are constrained by the particular site conditions, such as the location of buildings, services and vegetation. As a result, not all relevant site features and conditions may have been identified in this report.

The opinions, conclusions and any recommendations in this report are based on assumptions made by GHD described in this report. GHD disclaims liability arising from any of the assumptions being incorrect.

GHD has prepared this report on the basis of information provided by Department of Defence and others who provided information to GHD (including Government authorities)], which GHD has not independently verified or checked beyond the agreed scope of work. GHD does not accept liability in connection with such unverified information, including errors and omissions in the report which were caused by errors or omissions in that information.

Appendix B

Data validation

Appendix B

0089 HMAS Stirling– December 2024 QA/QC Evaluation

The QA and QC procedures were undertaken in accordance with the *ASC NEPM* and the *Assessment and management of contaminated sites* (DWER 2021).

QA involves all the actions, procedures, checks and decisions undertaken to ensure the representativeness and integrity of samples and the accuracy and reliability of analytical results (NEPC 2013). QC involves protocols to monitor and measure the effectiveness of QA procedures.

B-1 Fieldwork program

Field QA/QC procedures and compliance during the investigation are summarised in Table 1 below, with exceptions detailed in the following subsections.

Table 1 Summary of field work QA/QC compliance

QA/QC element	Requirement	Requirement adhered to?	Information / data acceptable?
Sampling methods	All sampling methods outlined in the HMAS Stirling OMP SAQP (GHD 2025) were adhered to.	Yes	Yes
Record keeping	Detailed records of field activities were maintained with the use of electronic or paper field sheets and quality control sample registers.	Yes	Yes, see Appendix F
CoC documentation	The CoC documentation was completed for each batch of samples, identifying the names of the samplers, the type of sample, the collection date, the analyses to be performed, sample preservation methods, and time the samples were relinquished to the courier.	Yes	Yes, see Appendix E
Sample labelling	Samples were properly labelled, showing reference number, sample ID, date of collection, sampler name and preservation techniques.	Yes	Yes
Sample containers	Samples were collected in appropriate laboratory supplied containers with suitable preservation methods (where required).	Yes	Yes
Sample storage and transport	Samples were stored in a chilled esky immediately after sampling prior to submission to the laboratory. Samples were kept in a chilled esky during delivery with CoC documentation. Samples were received at the laboratory at the recommended temperature (4 °C).	Yes, with exceptions	Yes, see Section B-1.1
Decontamination	Reusable field equipment (e.g. interface meter) were appropriately decontaminated using Liquinox between each sampling location.	Yes	Yes
Rinsate blanks	Rinsate samples were collected by the sampler on each day following decontamination of reusable sampling equipment. Analysis of rinsate blanks reported concentrations below laboratory LOR indicating equipment was decontaminated appropriately.	Yes	Yes, see Section B-1.2
Field blanks	Field blanks were collected by the sampler on each day to estimate potential contamination of a sample during the collection procedure. Analysis of field blanks reported	Yes	Yes, see Section B-1.2

QA/QC element	Requirement	Requirement adhered to?	Information / data acceptable?
	concentrations below laboratory LOR indicating no cross contamination occurred as a result of ambient conditions during sampling.		
Duplicate samples	Blind and split duplicate samples were collected for analysis by the primary and secondary laboratories, respectively (at a frequency of at least one pair per 10 primary samples). RPDs calculated for the duplicate samples were at or below 30%.	Yes, with exceptions	Yes, see Section B-1.3

B-1.1 Sample containers, storage, and transport

All samples were collected in appropriate laboratory supplied containers with suitable preservation methods (where applicable).

To aid sample integrity, all samples were promptly placed into a chilled esky (with double bagged ice or ice bricks) following the completion of sampling. Eskies were delivered to the primary laboratory (ALS Environmental) and secondary laboratory (Eurofins) as soon as practicable via courier.

As summarised in Table 2, all four sample receipts noted the samples were higher than the recommended temperature (4 °C). However, these receipts also noted the presence of ice or ice bricks and therefore it is considered that reasonable attempt to maintain the recommended sample temperature was made.

Table 2 Summary of sample receipt temperatures

Lab Report Number	Temperature (°C)	Earliest Sample Date	Lab Received Date	Comments
EP2419184	7.9	06/12/2024	20/12/2024	Ice present
EP2419185	7.9	12/12/2024	20/12/2024	Ice present
EP2419204	16.2	19/12/2024	20/12/2024	Ice present
EP2500597	12.0	14/01/2025	16/01/2025	Ice present

B-1.2 Quality assurance – blank samples

The groundwater QA samples collected during this sampling event were:

- **Rinsate blanks**: Rinsate blank samples are water samples collected from decontaminated, reused field equipment and were used primarily to assess whether the decontamination procedure was effective and if cross contamination has led to positive observations in subsequent samples. Rinsate samples were collected by pouring laboratory supplied rinsate water over reusable sampling equipment (e.g. interface probe) and collecting it in laboratory supplied containers. Rinsate samples were then transferred to a chilled cooler for sample preservation prior to and during transport to the testing laboratory.
- **Field blanks**: Field blank samples were used to estimate contamination of a sample during the collection procedure. Field blank samples were collected by pouring laboratory supplied rinsate water into laboratory supplied bottles onsite and sent to the laboratory for analysis along with other samples.

The blank samples collected and analysed as part of the quality assurance program are summarised in Table 3. All analyte concentrations for the transport, field, and rinsate blanks were below the laboratory LOR, except for those listed in Table 3. The tabulated blank sample results are shown in Table QC.1 in Attachment 1.

Table 3 Summary of rinsate, field and transport blanks

Lab report number	Sample type	Sample ID	Below LOR
EP2418001	Rinsate blank	0958_QC301_241126	Yes
		0958_QC302_241126	
		0958_QC303_241127	
		0958_QC304_241127

		0967_QC408_241205	
		0967_QC409_241206	
	Trip blank	0967_QC503_241206	Yes
		0967_QC504_241206	
EP2418818	Field blank	0967_QC401_241210	Yes
	Trip blank	0967_QC501_241212	Yes
EP2501437	Field blank	0967_QC404_250128	Yes

B-1.3 Quality control – duplicate samples

The QC samples collected during the investigation were:

- **Blind duplicates**: Blind duplicate samples were used to identify the variation in the analyte concentration between samples from the same sampling point and the repeatability of the laboratory's analysis.
- **Split duplicates**: Split duplicate samples were used to provide an indication of the repeatability of the results between laboratories.

Field duplicate samples (blind and split) were collected in replicate bottles during sampling. The required analyses were performed by ALS Laboratory group (primary laboratory) and Eurofins (secondary laboratory), both of whom are NATA accredited.

B-1.3.1 Sample collection frequency

Based on the OMP (GHD 2019), one pair of duplicates (blind and split) was required to be collected and analysed per 10 primary PFAS samples. The frequency of groundwater duplicates collected for this assessment is summarised in Table 4.

Table 4 Duplicate sampling frequency summary

Matrix	Rate	Expected number of duplicate pairs	Number of blind duplicate samples collected	Number of split duplicate samples collected
Water	1 duplicate pair per 10 primary samples	11 (110 primary samples)	11	8
Sediment	1 duplicate pair per 10 primary samples	3 (26 primary samples)	2	2

It is noted that the number of split duplicate samples collected for water and the number of blind and split duplicate samples for sediment was non-conforming. This is considered to have limited impact on the overall data quality noting that PFAS concentrations recorded in the primary samples during the sampling event were largely consistent with historical data, indicating acceptable repeatability in sampling and analytical procedures. The non-conformance will however be corrected during future sampling events.

B-1.3.2 Relative percentage difference calculations

RPD calculations are used to assess how closely primary, blind duplicate and split duplicate sample results match. RPDs are a quantitative measure of the accuracy of the analytical results and are calculated in accordance with the procedure described in AS 4482.1 – 2005 (Standards Australia 2005). According to AS 4482.1 – 2005, typical RPDs are expected to range between 30% and 50%; however, this may be higher for organics and for low concentrations of analytes.

RPD results were considered acceptable if they were less than or equal to 30%. The only exception to this was when concentrations within the primary and blind or split sample were less than ten times the laboratory LOR. In this case, a greater RPD value is considered acceptable.

Where a result is reported below the laboratory LOR for one of the paired samples, the sample was assigned a concentration equal to the LOR for RPD calculation purposes. This is based on the consideration that the chemical may be present at a concentration just below the laboratory LOR or not present at all (i.e. the concentration is zero). Where both results are reported below laboratory LOR, the RPD is not calculated.

Water RPDs

For the water monitoring (including groundwater, surface water and potable water), a total of 185 RPDs were calculated, and five RPDs (i.e., 2.7%) exceeded the adopted (conservative) 30% RPD acceptable limit, where the primary and/or duplicate sample concentrations were greater than ten times the laboratory LOR. 21 RPDs were recorded to be higher than the 30% RPD limit, but the primary and/or duplicate sample concentrations were lower than ten times the laboratory LOR, and were therefore considered acceptable. 475 RPDs could not be calculated as both the primary and duplicate/split sample concentrations were less than the laboratory LOR. A summary of these exceedances is detailed in Table 5 and full calculations are provided in Table QC.2 in Attachment 1.

Table 5 Summary of water RPD exceedances

Primary & Duplicate Field IDs (Type)	Analyte	RPD	Primary Concentration	Duplicate Concentration	Acceptable?
0967_POT125_241211 / 0967_QC204_241211 (Split Duplicate)	Perfluorooctane sulfonic acid (PFOS)	32%	0.08 µg/L	0.11 µg/L	No
	Perfluorohexane sulfonic acid (PFHxS)	36%	0.16 µg/L	0.23 µg/L	No

0967_SW018_241128 / 0967_QC203_241128 (Split Duplicate)	Perfluoroheptane sulfonic acid (PFHpS)	33%	0.05 µg/L	0.07 µg/L	Yes
	Perfluoropentanoic acid (PFPeA)	40%	0.02 µg/L	0.03 µg/L	Yes
0967_POT155_241210 / 0967_QC201_241210 (Split Duplicate)	Perfluorohexane sulfonic acid (PFHxS)	33%	0.05 µg/L	0.07 µg/L	Yes
	PFAS (Sum of Total)	82%	0.05 µg/L	0.12 µg/L	Yes
	PFAS (Sum of Total)(WA DER List)	75%	0.05 µg/L	0.11 µg/L	Yes
	Sum of PFHxS and PFOS	33%	0.05 µg/L	0.07 µg/L	Yes
0967_POT032_241210 / 0967_QC102_241210 (Blind Duplicate)	Perfluorohexane sulfonic acid (PFHxS)	40%	0.003 µg/L	<0.002 µg/L	Yes
	PFAS (Sum of Total)	40%	0.003 µg/L	<0.002 µg/L	Yes
	PFAS (Sum of Total)(WA DER List)	40%	0.003 µg/L	<0.002 µg/L	Yes
	Sum of PFHxS and PFOS	40%	0.003 µg/L	<0.002 µg/L	Yes
0967_POT009_241211 / 0967_QC103_241211 (Blind Duplicate)	Perfluorooctane sulfonic acid (PFOS)	40%	0.02 µg/L	0.03 µg/L	Yes
	Perfluorohexane sulfonic acid (PFHxS)	67%	0.02 µg/L	0.01 µg/L	Yes
0967_POT009_241211 / 0967_QC203_241211 (Split Duplicate)	Perfluorooctane sulfonic acid (PFOS)	67%	0.02 µg/L	0.04 µg/L	Yes
	PFAS (Sum of Total)(WA DER List)	40%	0.04 µg/L	0.06 µg/L	Yes
	Sum of PFHxS and PFOS	40%	0.04 µg/L	0.06 µg/L	Yes
0967_POT125_241211 / 0967_QC104_241211 (Blind Dupliucate	Perfluorobutane sulfonic acid (PFBS)	40%	0.04 µg/L	0.06 µg/L	Yes

The RPD values greater than the adopted threshold of 30% (where the primary and/or duplicate sample concentrations were greater than 10 times the applied LOR) are considered to have limited impact on the overall data quality given the low proportion of outliers relative to the wider dataset (i.e., 2.7%) and noting that in these cases, the reported concentrations were within the same order of magnitude.

Sediment RPDs

For the sediment monitoring, a total 21 RPDs were calculated, and five RPDs exceeded the adopted (conservative) 30% RPD acceptable limit, where the primary and/or duplicate sample concentrations were greater than ten times the laboratory LOR. Two RPDs were recorded to be higher than the 30% RPD limit, but the primary and/or duplicate sample concentrations were lower than ten times the laboratory LOR, and were therefore considered acceptable. 106 RPDs could not be calculated as both the primary and duplicate/split sample concentrations were less than the laboratory LOR. A summary of these exceedances is in Table 6 and full calculations are provided in Table QC.3 in Attachment 1.

Table 6 Summary of sediment RPD exceedances

Primary & Duplicate Field IDs (Type)	Analyte	RPD	Primary Concentration	Duplicate Concentration	Acceptable?
0967_SD020_241126 / 0967_QC101_241126 (Blind Duplicate)	Perfluorooctane sulfonic acid (PFOS)	41%	0.0077 mg/kg	0.0117 mg/kg	No
	PFAS (Sum of Total)	43%	0.0085 mg/kg	0.0131 mg/kg	No
	PFAS (Sum of Total)(WA DER List)	45%	0.0083 mg/kg	0.0131 mg/kg	No
	Sum of PFHxS and PFOS	45%	0.0083 mg/kg	0.0131 mg/kg	No
	Perfluorohexane sulfonic acid (PFHxS)	80%	0.0006 mg/kg	0.0014 mg/kg	Yes
0967_SD020_241126 / 0967_QC201_241126 (Split Duplicate)	Perfluorooctane sulfonic acid (PFOS)	35%	0.0077 mg/kg	0.011 mg/kg	No
0967_SD018_241128 / 0967_QC104_241128 (Blind Duplicate)	Perfluorohexane sulfonic acid (PFHxS)	40	0.0002	0.0003	Yes

The RPD values greater than the adopted threshold of 30% (where the primary and/or duplicate sample concentrations were greater than 10 times the applied LOR) are considered to have limited impact on the overall data quality noting that unacceptable outliers were identified at only a single sediment monitoring location (SD020) and noting that the reported concentrations in the duplicate pairs were within the same order of magnitude.

B-2 Laboratory program

Laboratory QA/QC procedures and compliance during the investigation are summarised in Table 7, with exceptions detailed in the following subsections.

Table 7 Summary of laboratory QA/QC compliance

QA/QC element	Requirement	Requirement adhered to?	Information/data acceptable?
NATA accreditation	Analysis of CoPC performed under NATA accreditation or equivalent government endorsed provider of accreditation.	Yes	Yes
Holding times	Laboratory to complete sample extraction and analysis of CoPC within method specifications.	Yes, with exceptions	Yes, see Section B-2.2
Analytical methods	Sample analyses are to use appropriate methods for each CoPC with regard to Schedule B (3) of the *ASC NEPM* and in accordance with the laboratory's NATA accreditation.	Yes	Yes
Laboratory LORs	Laboratory LORs are below adopted assessment criteria.	Yes	Yes
Laboratory QC results	No method blank, laboratory duplicates, laboratory controls, matrix spike or surrogate spike recovery outliers were	Yes, with exceptions	Yes, see Section B-2.2

QA/QC element	Requirement	Requirement adhered to?	Information/data acceptable?
	identified. Sufficient quantities of laboratory QC analysis was undertaken.		

B-2.1 Laboratory quality control procedures

Laboratory QC samples incorporated in the analytical process included:

- **Laboratory blind duplicates**: A laboratory blind duplicate provides data on the analytical precision and reproducibility of the analytical result. The laboratory blind duplicate is created by subsampling from one of the primary samples submitted for analysis. Laboratory blind duplicates are analysed at a rate equivalent to one in ten per analytical batch, or one sample per batch if less than 10 samples are analysed in a batch.
- **LCS:** The LCS analysis of either a reference material or a control matrix fortified with analytes representative of the analyte class. The purpose of LCS is to monitor method precision and accuracy independent of the sample matrix. Typically, the percentage recovery of the LCS is compared to the dynamic recovery limit based on the statistical analysis of the processed LCS analysis.
- **Matrix spikes**: Matrix spike sample analysis is the analysis of one or more replicate portions of samples from the batch, after fortifying the additional portion(s) with known quantities of the analyte(s) of interest. The percentage recovery of target analyte(s) from matrix spike samples is used to determine the bias of the method in the specific sample matrix.
- **Surrogate spikes**: Surrogate spikes provide a means of checking that no gross errors have occurred during any stage of the analytical method leading to significant analyte loss. Surrogate recoveries are similar to the analyte of interest in terms of chemical composition, extractability, and chromatographic conditions (retention time), but which are not normally found in environmental samples. Surrogate compounds are spiked into blanks, standards and samples submitted for organic analyses by gas-chromatographic techniques prior to sample extraction.
- **Method blanks**: Method or analysis blank sample analysis is the analysis of a sample that is as free as possible of the analytes of interest but has been prepared the same as the samples under investigation. The analysis is to ascertain if laboratory reagents, glassware and other laboratory consumables contribute to the observed concentration of analytes in the process batch. If below the maximum acceptable method blank (20% of the practical quantisation limit), the contribution is subtracted from the gross analytical signal for each analysis before calculating the sample analyte concentration. The method blank should return analyte concentrations as 'not detected'.

B-2.2 Laboratory quality control results

Laboratory quality control results were compared against criteria set by ALS Environmental and Eurofins, which are largely based on the *ASC NEPM* and US EPA (2006) methods. The individual testing laboratories conducted an assessment of the laboratory QC program internally; however, the results were also independently reviewed and assessed by GHD. All laboratory quality control measures were within the adopted acceptance criteria with the exception of those described in the subsections below.

The exceptions were limited and comprised a very small proportion of the large number of quality control measures completed for the investigation. Based on this, the exceptions described in the subsections below are not considered to significantly influence data quality.

B-2.3 QC sample frequency – outliers

All laboratory QC samples were tested with the expected frequency, except for those summarised in Table 8. These outliers only represent a small portion of the internal lab QC program conducted. Therefore, these minor non-compliances reported for this investigation are not considered to have materially affected the conclusions of this report.

Table 8 QC sample frequency – outliers

Lab Report	QC sample type	Method	Actual rate/ expected rate (%)
EP2418001	Laboratory Duplicates	Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	8.16/10.00
	Matrix Spikes	Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	4.08/5.00
EP2418361	Laboratory Duplicates	Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	6.25/10.00
	Matrix Spikes	Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	2.08/5.00
EP2418818	Laboratory Duplicates	Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	6.67/10.00
	Matrix Spikes	Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	3.45/5.00
EP2501437	Laboratory Duplicates	Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0.00/10.00
	Matrix Spikes	Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	0.00/5.00

B-2.3.1 Matrix spike - outliers

All matrix spikes were of an acceptable recovery except for those summarised in Table 9. These outliers only represent a small portion of the internal lab QC program conducted. Therefore, these minor non-compliances are not considered to have materially affected the conclusions of this report.

Table 9 Matrix spike outliers

Lab Report	Sample ID	Analyte	Comment
EP2418361	0967_MW205_ 241205	Chloride	MS recovery not determined, background level greater than or equal to 4x spike level.
	Anonymous	Perfluoropentanoic acid (PFPeA)	MS recovery not determined, background level greater than or equal to 4x spike level.
	Anonymous	Perfluorohexanoic acid (PFHxA)	MS recovery not determined, background level greater than or equal to 4x spike level.
	Anonymous	Perfluoroheptanoic acid (PFHpA)	MS recovery not determined, background level greater than or equal to 4x spike level.
	Anonymous	Perfluorooctanoic acid (PFOA)	MS recovery not determined, background level greater than or equal to 4x spike level.
	Anonymous	Perfluorononanoic acid (PFNA)	MS recovery not determined, background level greater than or equal to 4x spike level.
EP2418818	0967_POT136_241210	Perfluortridecanoic acid (PFTrDA)	Recovery greater than upper data quality objective.
EP2501437	Anonymous	Sulfate as SO4 - Turbidimetric	MS recovery not determined, background level greater than or equal to 4x spike level.
	Anonymous	Chloride	MS recovery not determined, background level greater than or equal to 4x spike level.

B-2.3.2 Laboratory control spike – outliers

All laboratory control spike outliers were of an acceptable recovery except for the one summarised in Table 10. This outlier only represents a small portion of the internal lab QC program conducted. Therefore, this minor non-compliance is not considered to have materially affected the conclusions of the report.

Table 10 Laboratory control spike outliers

Lab Report	Sample ID	Analyte	Data	Limits	Comment
EP2418001	QC-6236792-002 (sediment)	10:2 Fluorotelomer sulfonic acid	128%	54.8-124%	Recovery greater than upper control limit.
	QC-6231336-002 (water)	10:2 Fluorotelomer sulfonic acid	140%	64.2-133%	Recovery greater than upper control limit.
EP2418361	QC-6257408-002 (sediment)	10:2 Fluorotelomer sulfonic acid	157%	54.8-124%	Recovery greater than upper control limit.

B-2.3.3 Surrogate recovery – outliers

All laboratory surrogates were an acceptable recovery.

B-2.3.4 Duplicate – outliers

Samples were analysed and received acceptable RPDs.

B-2.3.5 Holding time – outliers

Samples were analysed within appropriate holding times, excluding those outlines in Table 11. The holding time breaches are not considered to significantly impact the overall data quality as they do not relate to analytes that are critical to the project objectives (i.e., they are non-PFAS analytes).

Table 11 Holding time – outliers

Lab Report	Sample ID	Analyte	Days overdue

B-3 Data quality indicator evaluation

An evaluation of the DQIs set for this assessment was undertaken subsequent to field works and laboratory analysis, this evaluation is presented in Table 12.

Table 12 Data quality indicator evaluation

DQI	Evaluation Criteria	Acceptable?
Completeness	All locations that were proposed to be sampled were sampled where possible. Samples were analysed according to the OMP (GHD 2019).	Yes
	All field documentation is complete and correct, including chain of custody documentation for samples.	Yes
	Field forms and documentation capture all relevant important information.	Yes
	Samples were analysed within appropriate holding times.	Yes
	Appropriate laboratory limits of reporting for comparison to relevant assessment criteria.	Yes
Comparability	Standardised operating procedure for groundwater sampling was adhered to and is in line with relevant guidelines.	Yes
	Field staff were experienced in the sampling of groundwater and were appropriately trained.	Yes
	Consistent laboratory use with consistent analytical methods used.	Yes
	Climatic conditions consistent and considered representative of region.	Yes
Representativeness	Samples were collected in a uniform and consistent manner, therefore representative of the media in the field.	Yes
Precision	Sufficient quantities of field blind and split duplicates were collected to enable comparison within and between laboratories.	Yes
	Sufficient quantities of internal laboratory duplicates were analysed to enable comparison within laboratories.	Yes
	Relative percentage difference calculations show that a large majority of duplicate sample concentrations are within defined difference limits.	Yes
	Field equipment was calibrated by equipment supplier (Appendix G6).	Yes
Accuracy	Sufficient quantities of field blanks, rinsate blanks and transport blanks were collected and analysed, with no results indicating cross contamination.	Yes
	Sufficient quantities of internal laboratory method blanks, surrogate spikes and laboratory control samples were analysed to determine laboratory accuracy, with the large majority of samples within defined limits.	Yes

Based on the results of the evaluation of the QA/QC data described in the previous sections, the reported QA/QC non-compliances are not considered likely to significantly influence the reliability of the analytical data. It is further considered that:

- The field and laboratory quality assurance measures implemented provide a reasonable level of confidence that the data collected and reported is appropriately complete, comparable and representative.
- The field and laboratory quality control measures implemented provide a reasonable level of confidence that the data collected and reported is appropriately accurate and precise.
- The overall review of the QA/QC results indicates that the data collected for the investigation is of acceptable quality upon which to provide an adequate and reliable assessment of the property.

Comments

Yellow highlighting indicates a RPD value greater than the acceptance criterion of 30%

#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

***RPDs have only been considered where a concentration is greater than 1 times the EQL.**

****Elevated RPDs are highlighted as per QAQC Profile settings (Acceptable RPDs for each EQL multiplier range are: 30 (1 - 10 x EQL); 30 (10 - 30 x EQL); 30 (> 30 x EQL))**

*****Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory**

Yellow highlighting indicates a RPD value greater than the acceptance criterion of 30%

***RPDs have only been considered where a concentration is greater than 1 times the EQL.**

****Elevated RPDs are highlighted as per QAQC Profile settings (Acceptable RPDs for each EQL multiplier range are: 30 (1 - 10 x EQL); 30 (10 - 30 x EQL); 30 (> 30 x EQL))**

*****Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory**

Yellow highlighting indicates a RPD value greater than the acceptance criterion of 30%

***RPDs have only been considered where a concentration is greater than 1 times the EQL.**

****Elevated RPDs are highlighted as per QAQC Profile settings (Acceptable RPDs for each EQL multiplier range are: 30 (1 - 10 x EQL); 30 (10 - 30 x EQL); 30 (> 30 x EQL))**

*****Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory**

Comments

#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

#2 Reported Analyte LOR is higher than Requested Analyte LOR

Comments

#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Comments

#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Multi-Parameter Water Quality Instrument

Customer:
Contact:

Manufacturer: YSI
Instrument: Professional Plus with Quatro cable
Serial #: 23G103462
Cable length: 1m (23G100262)

Item	Test	Pass	Comments
Battery	2 x Alkaline C-cells	✓	Voltage reading above 2.9V
	Battery Saver	✓	Automatically turns off after 30 minutes if not used
Connections	Condition	✓	Good, clean
Cable	Condition	✓	Clean, no tears
Display	Operation	✓	
Firmware	Version	✓	4.0.0
Keypad	Operational	✓	
Display	Screen	✓	
Unit	Condition, seals and O-rings	✓	
Monitor housing	Condition	✓	
pH			
Condition		✓	Good, clean
pH millivolts for pH7 calibration range 0 mV ± 50 mV		✓	
pH 4 mV range + 165 to + 180 from 7 buffer mV value		✓	175.00 mV
pH slope		✓	55 to 60 mV/pH, ideal 59mV 58.59
Response time < 90 seconds		✓	
Calibrated and conforms to manufacturer's specifications		✓	
ORP			
Condition		✓	Good, clean
Response time < 90 seconds		✓	
within ± 80mv of reference Zobell Reading		✓	
Calibrated and conforms to manufacturer's specifications		✓	variance range ± 20mV 7 mV
Conductivity			
Condition		✓	Good, clean
Temperature		✓	°C
Conductivity cell constant 5.0 ± 1.0 in GLP file		✓	
Clean sensor reads less than 3 uS/cm in dry air		✓	
Calibrated and conforms to manufacturer's specifications		✓	µs/cm
Dissolved Oxygen			
Condition		✓	Good, clean
DO sensor in use		✓	polarographic
1.25 mil PE membrane (yellow membrane):		✓	
DO Sensor Value		✓	(min 4.31 uA - max 8.00 uA) Avg 6.15 uA
Calibrated and conforms to manufacturer's specifications		✓	ppm

This is to certify that the above instrument has been calibrated to the following specifications:

Dates

Date Samples Received	: 20-Dec-2024 13:15	Issue Date	: 23-Dec-2024
Client Requested Due Date	: 06-Jan-2025	Scheduled Reporting Date	: **06-Jan-2025**

Delivery Details

Mode of Delivery	: Carrier	Security Seal	: Intact.
No. of coolers/boxes	: 5	Temperature	: 7.9 - Ice present
Receipt Detail	:	No. of samples received / analysed	: 9 / 9

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Please see scanned COC for sample discrepencies: extra samples , samples not received etc.
- Please direct any queries related to sample condition / numbering / breakages to Sample Receipt (Samples.Perth@alsglobal.com)
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Perth, NATA accreditation no. 825, site no. 15847.
- Please direct any turnaround / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- **pH analysis should be conducted within 6 hours of sampling.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20mL or 125mL bottles have been tested in accordance with the QSM5.4 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per tables in USEPA 1633 where listed. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.

Order number	: 12641234	No. of samples analysed	: 9

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type		Count		Rate (%)		Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)						
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	20	5.00	10.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Solid Phase Extraction (SPE) for PFAS in water	* ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **WATER**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **WATER**

Delivery Details

Mode of Delivery	: Carrier	Security Seal	: Intact.
No. of coolers/boxes	: 5	Temperature	: 7.9 - Ice present
Receipt Detail	:	No. of samples received / analysed	: 161 / 161

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Please see scanned COC for sample discrepencies: extra samples , samples not received etc.
- Please direct any queries related to sample condition / numbering / breakages to Sample Receipt (Samples.Perth@alsglobal.com)
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Perth, NATA accreditation no. 825, site no. 15847.
- Please direct any turnaround / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- **pH analysis should be conducted within 6 hours of sampling.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Proactive Holding Time Report

The following table summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory.

Matrix: **WATER** Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method Client Sample ID(s)	Container	Due for extraction	Due for analysis	Samples Received Date	Samples Received Evaluation	Instructions Received Date	Instructions Received Evaluation
ED093F: Major Cations - Dissolved							
0089_MW158_24121	Clear Plastic Bottle - Natural	---	19-Dec-2024	20-Dec-2024	×	---	---

No. of samples received	: 161		
No. of samples analysed	: 161		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Canhuang Ke	Inorganics Supervisor	Perth Inorganics, Wangara, WA
Chris Lemaitre	Laboratory Manager (Perth)	Perth Inorganics, Wangara, WA
John Horwood	Organic Supervisor	Perth Organics, Wangara, WA

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20mL or 125mL bottles have been tested in accordance with the QSM5.4 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- As per QWI – EN55-3 Data Interpreting Procedures, Ionic balances are typically calculated using Major Anions - Chloride, Alkalinity and Sulfate; and Major Cations - Calcium, Magnesium, Potassium and Sodium. Where applicable and dependent upon sample matrix, the Ionic Balance may also include the additional contribution of Ammonia, Dissolved Metals by ICPMS and H+ to the Cations and Nitrate, SiO2 and Fluoride to the Anions.
- EP231X: High LCS and matrix spike recoveries deemed acceptable as all associated analyte results are <LOR.
- EP231X: LOR has been raised for particular analytes on certain samples due to matrix interference.
- Sodium Adsorption Ratio (where reported): Where results for Na, Ca or Mg are <LOR, a concentration at half the reported LOR is incorporated into the SAR calculation. This represents a conservative approach for Na relative to the assumption that <LOR = zero concentration and a conservative approach for Ca & Mg relative to the assumption that <LOR is equivalent to the LOR concentration.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per tables in USEPA 1633 where listed. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per USEPA 1633 limits where LISTED. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.
- ED045G: The presence of Thiocyanate, Thiosulfate and Sulfite can positively contribute to the chloride result, thereby may bias results higher than expected. Results should be scrutinised accordingly.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EP2419185**	Page	: 1 of 35
Client	: **GHD PTY LTD**	Laboratory	: Environmental Division Perth
Contact	: [redacted]	Telephone	: +61-8-9406 1301
Project	: 12641234 - PFAS OMP	Date Samples Received	: 20-Dec-2024
Site	: Stirling TA KD	Issue Date	: 09-Jan-2025
Sampler	: [redacted]	No. of samples received	: 161
Order number	: 12641234	No. of samples analysed	: 161

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	Evaluation	
Laboratory Duplicates (DUP)							
Moisture Content	EA055	4	31	12.90	10.00	✓	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.
Alkalinity by Auto Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) on a settled supernatant aliquot of the sample using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride. In the presence of ferric ions the liberated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm.
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	* EN055 - PG	WATER	In house: Referenced to APHA 1030E. This method is compliant with NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	* ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	* ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

Delivery Details

Mode of Delivery	: Carrier	Security Seal	: Not Available
No. of coolers/boxes	: 1	Temperature	: 16.2 - Ice present
Receipt Detail	:	No. of samples received / analysed	: 18 / 18

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Please see scanned COC for sample discrepencies: extra samples , samples not received etc.
- Please direct any queries related to sample condition / numbering / breakages to Sample Receipt (Samples.Perth@alsglobal.com)
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Perth, NATA accreditation no. 825, site no. 15847.
- Please direct any turnaround / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- **pH analysis should be conducted within 6 hours of sampling.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

CERTIFICATE OF ANALYSIS

Work Order	: **EP2419204**	Page	: 1 of 20
Client	: **GHD PTY LTD**	Laboratory	: Environmental Division Perth
Contact	[redacted]	Contact	: [redacted]
Address	: 999 HAY STREET PERTH WA, AUSTRALIA 6000	Address	: 26 Rigali Way Wangara WA Australia 6065
Telephone	: ----	Telephone	: +61-8-9406 1301
Project	: 12641234 - PFAS OMP	Date Samples Received	: 20-Dec-2024 13:15
Order number	: 12641234	Date Analysis Commenced	: 24-Dec-2024
C-O-C number	: 77243	Issue Date	: 07-Jan-2025 18:05
Sampler	: [redacted]		
Site	: HMAS Stirling		
Quote number	: EP24GHDSER0016_V5		
No. of samples received	: 18		
No. of samples analysed	: 18		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Inorganics Supervisor	Perth Inorganics, Wangara, WA
	Laboratory Manager (Perth)	Perth Inorganics, Wangara, WA
	Organic Supervisor	Perth Organics, Wangara, WA
	Inorganic Chemist	Perth Inorganics, Wangara, WA

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20mL or 125mL bottles have been tested in accordance with the QSM5.4 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- As per QWI – EN55-3 Data Interpreting Procedures, Ionic balances are typically calculated using Major Anions - Chloride, Alkalinity and Sulfate; and Major Cations - Calcium, Magnesium, Potassium and Sodium. Where applicable and dependent upon sample matrix, the Ionic Balance may also include the additional contribution of Ammonia, Dissolved Metals by ICPMS and H+ to the Cations and Nitrate, SiO2 and Fluoride to the Anions.
- EP231X-SUT: High LCS recovery deemed acceptable as all associated analytes are <LOR.
- Sodium Adsorption Ratio (where reported): Where results for Na, Ca or Mg are <LOR, a concentration at half the reported LOR is incorporated into the SAR calculation. This represents a conservative approach for Na relative to the assumption that <LOR = zero concentration and a conservative approach for Ca & Mg relative to the assumption that <LOR is equivalent to the LOR concentration.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per tables in USEPA 1633 where listed. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per USEPA 1633 limits where LISTED. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.
- ED045G: The presence of Thiocyanate, Thiosulfate and Sulfite can positively contribute to the chloride result, thereby may bias results higher than expected. Results should be scrutinised accordingly.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EP2419204**	Page	: 1 of 8
Client	: **GHD PTY LTD**	Laboratory	: Environmental Division Perth
Contact	: [redacted]	Telephone	: +61-8-9406 1301
Project	: 12641234 - PFAS OMP	Date Samples Received	: 20-Dec-2024
Site	: HMAS Stirling	Issue Date	: 07-Jan-2025
Sampler	: [redacted]	No. of samples received	: 18
Order number	: 12641234	No. of samples analysed	: 18

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.
Alkalinity by Auto Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) on a settled supernatant aliquot of the sample using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride. In the presence of ferric ions the liberated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm.
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	* EN055 - PG	WATER	In house: Referenced to APHA 1030E. This method is compliant with NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	* ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	* ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

No. of coolers/boxes	: 1	Temperature	: 12.0 - Ice present
Receipt Detail	:	No. of samples received / analysed	: 30 / 30

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Please see scanned COC for sample discrepencies: extra samples , samples not received etc.
- Please direct any queries related to sample condition / numbering / breakages to Sample Receipt (Samples.Perth@alsglobal.com)
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Perth, NATA accreditation no. 825, site no. 15847.
- Please direct any turnaround / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- **pH analysis should be conducted within 6 hours of sampling.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Laboratory Manager (Perth)	Perth Inorganics, Wangara, WA
	Organic Supervisor	Perth Organics, Wangara, WA

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20mL or 125mL bottles have been tested in accordance with the QSM5.4 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- As per QWI – EN55-3 Data Interpreting Procedures, Ionic balances are typically calculated using Major Anions - Chloride, Alkalinity and Sulfate; and Major Cations - Calcium, Magnesium, Potassium and Sodium. Where applicable and dependent upon sample matrix, the Ionic Balance may also include the additional contribution of Ammonia, Dissolved Metals by ICPMS and H+ to the Cations and Nitrate, SiO2 and Fluoride to the Anions.
- EP231X: LOR has been raised for particular analytes on certain samples due to matrix interference.
- Sodium Adsorption Ratio (where reported): Where results for Na, Ca or Mg are <LOR, a concentration at half the reported LOR is incorporated into the SAR calculation. This represents a conservative approach for Na relative to the assumption that <LOR = zero concentration and a conservative approach for Ca & Mg relative to the assumption that <LOR is equivalent to the LOR concentration.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per tables in USEPA 1633 where listed. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per USEPA 1633 limits where LISTED. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.
- ED045G: The presence of Thiocyanate, Thiosulfate and Sulfite can positively contribute to the chloride result, thereby may bias results higher than expected. Results should be scrutinised accordingly.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EP2500597**	Page	: 1 of 10
Client	: **GHD PTY LTD**	Laboratory	: Environmental Division Perth
Contact	: [redacted]	Telephone	: +61-8-9406 1301
Project	: 12641234 - PFAS OMP	Date Samples Received	: 16-Jan-2025
Site	: 0089 HMAS Stirling	Issue Date	: 24-Jan-2025
Sampler	: [redacted] [redacted]	No. of samples received	: 30
Order number	: 12641234	No. of samples analysed	: 30

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
ED041G: Sulfate (Turbidimetric) as SO4 2- by DA	EP2500344--002	Anonymous	**Sulfate as SO4 - Turbidimetric**	14808-79-8	Not Determined	---	**MS recovery not determined, background level greater than or equal to 4x spike level.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type		Count		Rate (%)		Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)						
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	29	6.90	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)						
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	0	29	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.
Alkalinity by Auto Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) on a settled supernatant aliquot of the sample using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride. In the presence of ferric ions the liberated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm.
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	* EN055 - PG	WATER	In house: Referenced to APHA 1030E. This method is compliant with NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	* ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	* ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

Date/Time received Dec 20, 2024 2:10 PM
Eurofins reference 1173728

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of chilled sample on the batch as recorded by Eurofins Sample Receipt : 11 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
ppm: parts per million
µg/L: micrograms per litre
ppb: parts per billion
%: Percentage
org/100 mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100 mL: Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit
Colour: Pt-Co Units (CU)

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank							
Perfluoroalkyl carboxylic acids (PFCAs)							
Perfluorobutanoic acid (PFBA)	ug/kg	< 5			5	Pass

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).

Sum of US EPA PFAS (PFOS + PFOA)*	0.01	ug/L	< 0.01	< 0.01	< 0.01	< 0.01
Sum of enHealth PFAS (PFHxS + PFOS + PFOA)*	0.01	ug/L	< 0.01	< 0.01	< 0.01	< 0.01
Sum of WA DWER PFAS (n=10)*	0.05	ug/L	< 0.05	< 0.05	< 0.05	< 0.05

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Perfluoroalkyl carboxylic acids (PFCAs)	Welshpool	Dec 23, 2024	28 Days
- Method: Method ARL0510_ARL0511 PFAS in aqueous & solid samples by LC-MS/MS			
Perfluoroalkyl sulfonamido substances	Welshpool	Dec 23, 2024	28 Days
- Method: Method ARL0510_ARL0511 PFAS in aqueous & solid samples by LC-MS/MS			
n:2 Fluorotelomer sulfonic acids (n:2 FTSAs)	Welshpool	Dec 23, 2024	28 Days
- Method: Method ARL0510_ARL0511 PFAS in aqueous & solid samples by LC-MS/MS			
Perfluoroalkyl sulfonic acids (PFSAs)	Welshpool	Dec 23, 2024	28 Days
- Method: Method ARL0510_ARL0511 PFAS in aqueous & solid samples by LC-MS/MS			
PFASs Summations	Welshpool	Dec 23, 2024	
- Method: Method ARL0510_ARL0511 PFAS in aqueous & solid samples by LC-MS/MS

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N09	Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	Sample Temperature of chilled sample on the batch as recorded by Eurofins Sample Receipt : 12.8 degrees Celsius.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
N/A	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank							
Perfluoroalkyl carboxylic acids (PFCAs)

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	N/A
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	N/A
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N09	Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).

Surface Water – Field Sheet

Client: Department of Defence	Sample ID: 0089-SW317-241217
Project: OMP	Project Number: 12641234
Location: Garden Island	Date: 17/12/24
Undertaken by: [redacted]	Time: 8:45

SURFACE WATER DETAILS

Natural ☑	Man-made: ☐	Unknown: ☐	Flow rate:

Comment: Ocean

Type of water body: River ☐ Creek ☐ Stream ☐ Drain ☐ Culvert ☐ Dam ☐ Pond ☐ Other: Ocean

Collection point: ~ 1m from shoreline	Equipment used: YSI 23G103462

Dimensions of water body	Shape:	Width: m	Length: m	Depth: m

WATER PARAMETERS

Sample Depth (m)	Temp. (°C)	DO %Sat	DO (ppm/mg/L)	SPC (µS/cm)	TDS (ppm/mg/L)	pH (pH units)	Eh (mV)
	±0.2°C	±10%	±10%	±3%	±3%	±0.1 pH units	±10 mV
0.1	24.0	68.2	5.20	52210	33928	7.88	162.0

Comments (e.g., sheen, colour, odour, sediment load): No colour, no sheen, no sediment, no odour

SAMPLING DETAILS

Sample ID: 0089-SW317-20241217	Duplicate (QC) samples taken (Y) / N	Duplicate (QC) sample IDs: 0089-QC108-241217 + 0089-QC208-241217
Time: 8:45	Volume removed:	Number of sample containers: 3 (2 x PFAS (standard) 1 x Green) Field Filtered Y / (N)

Type and number of sample containers: Preserved Plastic: Unpreserved Plastic: 3 Preserved Glass: Unpreserved Glass: Preserved Vial: Unpreserved Vial:

1. Introduction

GHD Pty Ltd (GHD) has been engaged by the Department of Defence (Defence) to implement the per- and poly-fluoroalkyl substances (PFAS) Ongoing Monitoring Plan (OMP) at His Majesty's Australian Ship (HMAS) Stirling (hereafter referred to as the 'base') in Western Australia (WA). The location of the base, the surrounding PFAS Management Area and key base features are shown in Figure 1 and Figure 2, Appendix A.

The OMP (Defence, 2019) and its associated Sampling Analysis and Quality Plan (SAQP) (GHD, 2025) outlines the rationale and scope for the monitoring of concentrations and extent of PFAS in groundwater, porewater, surface water, and sediment at the base and within the Management Area. Monitoring is undertaken on a quarterly basis including March, June, September and December sampling events. This Sampling Event Factual Report documents the results of the March 2025 Sampling Event.

1.1 Objectives

The key objectives of the OMP are to evaluate:

– The spatial and temporal (including seasonal) nature and extent of PFAS impact in the environment associated with site sources of PFAS derived from legacy use of aqueous film-forming foam (AFFF);
– Changes to the Conceptual Site Model (CSM), which describes the current understanding of PFAS sources, transport pathways and receptors;
– Whether current risks to human and ecological receptors require review;
– The influence that risk management activities at the base, as outlined in the PFAS Management Area Plan (PMAP) (Defence, 2019) have had on PFAS in the environment; and
– Whether any identified changes trigger an action and/or review.

The data will assist in the timely identification of risks and inform Defence's approach to the management of PFAS, including updates and revisions to the PMAP.

1.2 Purpose of this report

This Sampling Event Factual Report has been prepared to document the results of the March 2025 sampling event, specifically highlighting first-time detections and/or new exceedances of relevant guideline values for perfluorooctane sulfonic acid (PFOS), perfluorohexane sulfonic acid (PFHxS), perfluorooctanoic acid (PFOA) and perfluorobutane sulfonic acid (PFBS).

An Ongoing Monitoring Report (OMR) will be prepared following the completion of each 12-month sampling period or as otherwise agreed.

This report has been prepared with reference to the Defence *Ongoing Monitoring Program Reporting Guidance* issued in February 2024 (Defence, 2024).

2. Scope of work

The scope of work was completed with reference to the OMP SAQP (GHD, 2025), as follows:

– Organise fieldwork and obtain approval for base access to monitoring locations.
– Collection of samples and water quality parameters from nominated locations (refer to Section 2.1).
– Collect and analyse samples for quality assurance and quality control (QA/QC).
– Analysis of samples for PFAS at the limit of reporting (LOR) nominated in the SAQP.
– Data management of the OMP field and laboratory data in the Defence ESdat database.
– Preparation of this Sampling Event Factual Report for the March 2025 sampling event.

2.1 Sampling locations

2.1.1 Groundwater

The groundwater monitoring locations are presented in Table 1 and are shown in Figure 3 to Figure 7 in Appendix A.

Table 1 OMP groundwater monitoring locations

Area	Monitoring Well ID
Fire Training Area	MW109, MW112, MW500, MW120, MW121, MW123, MW124, MW125, MW126, MW127 and MW128
Demolition Ground	MW139, MW141, MW142, MW147 and MW149
WWTP	MW158, MW161, MW166, MW171, MW173, MW193, MW195D, MW195S, MW196, MW199, MW200, MW202, MW203 and MW468
Helicopter Support Facility	MW214, MW215, MW216, MW217, MW220, MW224, MW225, MW226, MW227, MW228 and MW282
Accommodation Area	MW288 and MW289
Dredged Sediments	MW268 and MW269
AVCAT Storage and Fuel Farm	MW233, MW236, MW238, MW239, MW240, MW242, MW243, MW245, MW249, MW496 and MW516
Fire Station, Flammable / Hazardous Goods and Waste Storage, Ship Sullage	MW010, MW255, MW256, MW257, MW258, MW259 and MW553

2.1.2 Porewater, surface water and sediment monitoring locations

The porewater, surface water and sediment locations are presented in Table 2 and are shown in Figure 3 to Figure 7 in Appendix A.

Table 2 OMP porewaters, surface water and sediment monitoring locations

Area	Surface water sampling Location ID	Sediment Sampling Location ID	Porewater Sampling Location ID
Fire Training Areas	SW130, SW132, SW134	SD335, SD340, SD341, SD362, SD363, SD364	PW335, PW340, PW341, PW362, PW363, PW364
Demolition Ground	SW150, SW152, SW154, SW156	SD329, SD330, SD331, SD356, SD357, SD358	PW329, PW330, PW331, PW356, PW357, PW358

Accommodation Area	-	SD346	PW346
Dredged Sediments	SW317, SW318, SW319	SD374, SD375, SD378	PW374, PW375, PW378

2.2 SAQP deviations

The March 2025 sampling event was completed with reference to the OMP SAQP (GHD, 2025), GHD's health and safety protocols and GHD's standard operating procedures for field work, which have been developed in accordance with WA contaminated land guidance. Deviations from the OMP SAQP are summarised in Table 3.

Table 3 Summary of derivations from the OMP SAQP

Location	Deviation	Comments
MW196	Not sampled	Access to this monitoring location at in the WWTP source area requires a gate to be opened by base personnel. Base personnel were unavailable to open the gate at the time of the sampling event and therefore, the well was not sampled. **Minimal impact** – the range of PFAS concentrations at this well is well understood from historical data and are typically below the LOR. Base-wide groundwater contours were able to be inferred based on the wider monitoring network. Hydraulically down-gradient groundwater water location MW468 (i.e., closer to the receiving environment) was able to be sampled to provide an assessment of risks to the marine environment which is the primary sensitive receptor for the base.
MW109, MW268, MW233	Field data not recorded	Depth to groundwater and physicochemical parameters were mistakenly not recorded at these locations. **Minimal impact** – PFAS concentrations were able to be recorded. Gauging of nearby monitoring wells (i.e., those associated with the respective source areas that the monitoring wells are within) provides a broad understanding of the groundwater elevation and physicochemical profile of the areas.
MW239	Not sampled	The well, located in the AVCAT Storage and Fuel Farm source area, was found to be partially buried and the casing blocked with sand at the time of the sampling event. It was therefore unable to be sampled. **Minimal impact** – the range of PFAS concentrations at this well is well understood from historical data. Base-wide groundwater contours were able to be inferred based on the wider monitoring network. Hydraulically down-gradient groundwater water locations (i.e., closer to the receiving environment) including MW242, MW245, MW249. MW496 and MW516) were able to be sampled to provide an assessment of risks to the marine environment which is the primary sensitive receptor for the base.
MW282	Incorrect well sampled	Field work error – MW539 was incorrectly sampled instead of MW282. **Minimal impact -** the range of PFAS concentrations at MW282 is well understood from historical data and has not significantly fluctuated since 2019. The well was

Location	Deviation	Comments
		able to be sampled as part of the subsequent June 2025 sampling event (reported on separately). Hydraulically down-gradient porewater and surface water locations in the receiving environment were able to be sampled to provide an assessment of risks to the marine environment which is the primary sensitive receptor for the base. MW539 is immediately adjacent to MW282 though is screened in a deeper potion of the aquifer (i.e., from 16.5 to 20.5 m bgl, whereas MW282 is screened from 4.5 to 7.5 m bgl), so provides an additional datapoint representative of PFAS impacts in the deeper portion of the aquifer.
All locations	Daily “bump tests” not undertaken	The water quality meter used to record physicochemical parameters of water samples during the sampling event was calibrated by the supplier prior to the sampling event (refer to Appendix D) though daily “bump tests” to monitor calibration throughout the sampling event were not undertaken. **Minimal impact** – recorded physicochemical parameters were consistent with the historical dataset.

3. Methodology

3.1 Sampling methodology

The methodology for the March 2025 sampling event was completed with reference to the OMP SAQP (GHD, 2025) as outlined in the following sections.

3.1.1 Groundwater sampling

The groundwater sampling methodology is outlined in Table 4.

Table 4 Groundwater monitoring wells – sampling method

Activity	Details
Well Gauging	Monitoring wells were first gauged to allow subsequent correction of groundwater levels relative to Australian Height Datum (AHD) prior to groundwater sample collection. All depth measurements referenced the top of casing (TOC) of the monitoring well as an established datum.
Groundwater Physicochemical Parameters	Groundwater physiochemical parameters were recorded via a water quality meter from HydraSleeves® or purged water via peristaltic pump. The following parameters were recorded: – pH. – electrical conductivity (EC). – oxidation reduction potential (ORP). – Dissolved oxygen (DO). – Temperature. – Total Dissolved Solids (TDS). The water quality meter was calibrated by the equipment supplier. General observations regarding water quality (e.g., turbidity, colour etc.) or obvious indicators of contamination (e.g., sheens) were also recorded.
Deployment and Retrieval of HydraSleeves®	In compliance with section 18 of the Heads of EPA National Environmental Management Plan 3.0 (HEPA NEMP), groundwater samples were collected using bore-dedicated polypropylene HydraSleeves®. The HydraSleeves® were installed and left in place for a minimum of 24 hours prior to retrieving for sample collection. Where monitoring well construction details were available, the HydraSleeves® were positioned to target the approximate mid-section of the water column beneath the screened interval. Where construction details were not available, the HydraSleeves® were placed approximately 1 m from the base of the monitoring well (where sufficient depth of water was present within the well column). Samples were collected via continuous pull method at a rate allowing the water to pass through the check value into the sample sleeve. Samples were discharged immediately (to minimise changes in chemistry) via discharge tube. Following sampling, new HydraSleeves® were deployed in preparation for the next OMP monitoring event using the same string for consistency (same depth of sampling i.e. within screen depth). In the event that a monitoring well was found to contain a HydraSleeve® that belonged to another program, the HydraSleeve® was used for sampling (if it was in satisfactory condition) as outlined above, then replaced with a new HydraSleeve®. This did not occur during the March 2025 sampling event.
Alternative sampling methodology (low flow micro-purge)	In the event the water column wasn't sufficient to fill the HydraSleeve®, the HydraSleeve® was deployed with a top weight to compress the HydraSleeve® and left in wells for a minimum of 24 hours to allow restabilisation. If the HydraSleeve® was then retrieved with no or insufficient sample volume, low flow sampling occurred via a low flow micro-purge pump using the following methodology: – Post-gauging, each monitoring well was purged using a low flow micro-purge pump fitted with bore-dedicated inert silicone and High-density Polyethylene (HDPE) tubing. The upper end of the tubing was connected to the flow cell of a water quality meter positioned to prevent entrapment of oxygen.

Activity	Details
	– The pump intake was placed approximately 0.5 m below the top of screen (or at least 0.5 m below the top of the water column) to ensure collection of samples representative of groundwater quality beneath the base. – Measurement of water quality parameters was undertaken immediately after the flow cell was full and continued thereafter at two to five-minute intervals during the purging process. – Purging was undertaken until stabilisation of field parameters was achieved after which the well was subsequently sampled. Parameters were considered stable when they are within the following range (where practicable within the time constraints of the program): • Temperature: +/- 0.2 °C* • pH: +/- 0.05 • EC: +/- 3% • DO: +/- 10% • ORP: +/- 10 mV – Representative groundwater samples were collected directly from the HDPE tubing into laboratory supplied sample containers. Use of the alternative sampling methodology was not required during the March 2025 sampling event **Note: The OMP SAQP (GHD, 2025) erroneously states variation in temperature should be +/- 0.02 °C rather than +/- 0.2 °C*
Field Records	Field records included the following information: – Gauging data – Sampling time and date. – Weather conditions. – Sample collection method. Where a HydraSleeve® is used for sample collection, the target interval depth was recorded. – Stabilised field parameters. – Observations regarding water quality (e.g., turbidity, colour etc.) or obvious indicators of contamination (e.g., sheens). – Sampling equipment decontamination procedures where non-disposable sampling equipment is utilised. – Calibration records. – Well gauging records. All sample documentation including field notes, reporting records, Chain of Custody (CoC) and equipment calibration certificates and procedures were retained within project files.
Decontamination procedure	Dedicated HydraSleeves® or HDPE tubing (in the event that a HydraSleeve® was not used) was used at each groundwater bore, thus removing the need for decontamination of these items. Single use nitrile gloves were worn during sampling and appropriately disposed of between each sampling location. All re-usable sampling equipment was thoroughly washed using PFAS and phosphate-free detergent (mixed per supplier instructions) then double rinsed with laboratory-supplied rinsate water before the sample collection.
Sample identification, preservation transport and holding times	Each sample bottle was pre-labelled by the laboratory with a unique barcode which was scanned into a mobile application to generate the CoC. Samples were collected directly in laboratory supplied bottles (Teflon-free) and packed in chilled containers for delivery to the laboratory under CoC documentation. Sample containers, preservation procedures, sample storage requirements and holding times were undertaken in accordance with those recommended by Standards Australia (AS/NZS 5667.1:1998).

3.1.2 Porewater sampling methodology

The methodology for porewater sampling is outlined in Table 5.

Table 5 Porewater sampling methodology

Item	Details
Porewater Sample Collection	Sampling was conducted using a reusable stainless steel piezometer which has a screened zone consisting of a series of very fine interlaced machined slots to allow porewater to enter the sampler. The sampling end of the piezometer was inserted into the surficial marine sediments to approximately 0.5 m below the surface. Once the target sample depth was reached, porewater was collected using a peristaltic pump fitted with bore-dedicated silicone and HDPE tubing into laboratory supplied bottles. Field parameters were recorded (pH, EC, TDS, ORP, DO and temperature). Purging prior to sampling was not considered necessary due to the highly transmissive nature of the intertidal zone sediments. Field EC and/or TDS readings were used to assess whether the porewater sample is representative of discharging groundwater and not purely seawater.
Field Records	Field records included the following information: – Sampling time and date. – Weather conditions. – Sample collection method. – Field parameters – Observations regarding water quality (e.g., turbidity, colour etc.) or obvious indicators of contamination (e.g., sheens). – Sampling equipment decontamination procedures where non-disposable sampling equipment is utilised. All sample documentation including field notes, reporting records, COC and equipment calibration certificates and procedures were retained within project files.
Decontamination	Single use nitrile gloves were worn during sampling and appropriately disposed of between each sampling location. Tubing was replaced at each sampling location. All re-usable sampling equipment was thoroughly washed using PFAS and phosphate-free detergent (mixed per supplier instructions) then double rinsed with laboratory-supplied rinsate water before the sample collection.

3.1.3 Surface water sampling methodology

The methodology for the surface water monitoring is detailed in Table 6.

Table 6 Surface Water Monitoring

Item	Details
Field parameters	Surface water physiochemical parameters (i.e. pH, EC, ORP, DO, and temperature) were recorded at the time of sampling using a pre-calibrated water quality meter. Field observations such as odours or sheen presence were also recorded on field sampling sheets.
Sampling Method	Where the embankment of the water body was stable and the water body could be safely accessed, surface water samples were collected by hand, directly into the laboratory supplied sample containers using a ‘grab’ (manual) sample method. Where depth permitted, the sample container was positioned at least 10 cm below the surface water level and above the sediment bed and oriented with the capped opening facing downwards to avoid the collection of surface films. Once in position, the container cap was removed to allow sample collection. Where sampling points cannot be safely accessed, surface water samples were collected using a long-handled sampler and decanted into the laboratory supplied sample containers. Samples were collected with reference to Australian/New Zealand Standards (AS/NZS 5667.1:1998) Water quality – Sampling – Guidance on the design of sampling programs, sampling techniques and the preservation and handling of samples.
Sample Collection	Water samples were placed directly into appropriately labelled, laboratory supplied sample bottles and packed in chilled containers for delivery to the laboratory under Chain of Custody documentation.

Item	Details
Decontamination	Single use nitrile gloves were worn during sampling and appropriately disposed of between each sampling location. All re-usable sampling equipment was thoroughly washed using PFAS and phosphate-free detergent (mixed per supplier instructions), then double rinsed with laboratory supplied rinsate water before the sample collection.
Sample identification, preservation, transport and holding times.	Each sample container was pre-labelled by the laboratory with a unique barcode which was scanned into a mobile application to generate the CoC. Samples were contained in laboratory supplied bottles (Teflon-free) and packed in chilled containers for delivery to the laboratory under Chain of Custody documentation. Sample containers, preservation procedures, sample storage requirements and holding times were undertaken in accordance with those recommended by Standards Australia (AS/NZS 5667.1:1998 as appropriate).
Field Records	Field records included the following information: – Sampling time, date and name of the sampler. – Weather conditions. – Sample collection method. – Field parameters – Observations regarding water quality (e.g. turbidity, colour etc.) or obvious indicators of contamination (e.g. sheens). – Depth of water body, flow rate and sample depth. – Sampling equipment decontamination procedures where non-disposable sampling equipment was utilised. – Calibration records. All sample documentation including field notes, reporting records, CoC and equipment calibration certificates and procedures were retained within project files.

3.1.4 Sediment sampling methodology

The methodology for sediment sampling is detailed in Table 7.

Table 7 Sediment Investigation Methodology

Item	Details
Sample Collection	Sediment samples were collected at the sediment/water interface using hand tools (e.g. trowel, hand auger, PVC pipe etc.) with samples placed directly into appropriately labelled, laboratory supplied sample containers and packed in chilled containers for delivery to the laboratory under Chain of Custody documentation. At each sampling location, the sediment sample will be visually assessed and observations (including physical description) recorded on field data sheets.
Field Records	Field records included the following information: – Sampling time, date and name of the sampler. – Sample description. – Weather conditions. – Sample collection method. – Observations regarding sediment quality (e.g., colour, grain size etc.) or obvious indicators of contamination (e.g., staining). – Sampling equipment decontamination procedures where non-disposable sampling equipment was utilised. All sample documentation including field notebooks, reporting records, CoC and equipment calibration certificates and procedures were retained within project files.
Decontamination	Single use nitrile gloves were worn during sampling and appropriately disposed of between each sampling location. All re-usable sampling equipment was thoroughly washed using PFAS and phosphate-free detergent (mixed per supplier instructions) then double rinsed with laboratory-supplied rinsate water before the sample collection.

3.2 Quality assurance and quality control

Quality assurance (QA) involves all the actions, procedures, checks and decisions, undertaken to ensure the representativeness and integrity of samples and accuracy and reliability of analytical results (NEPM, 2013). Quality control (QC) involves protocols to monitor and measure the effectiveness of QA procedures.

The data quality objectives (DQOs) and data quality indicators (DQIs) adopted for these works are presented in the SAQP (GHD, 2025). A review of the field and laboratory QA/QC performance from the investigation is presented in the QA/QC data validation report, Appendix B. Key findings of the data validation report include:

– The majority of the calculated relative percentage difference (RPD) in concentrations for each duplicate pair, as presented in the tables in Appendix B were within acceptable limits. In most cases, RPD values greater than the acceptance criterion of 30% are considered reflective of the proximity of the reported concentrations to the LOR (i.e., less than 10 times the LOR) or are associated with concentrations that are within the same order of magnitude. On this basis, the RPDs greater than 30% are considered to have minimal impact on the data quality.
– Field blank analytical results were less than the LOR in all cases.
– Rinsate blank analytical results were less than the LOR in all cases.

Overall, the QA/QC assessment concluded that the collected data is considered appropriate for the work undertaken and are considered usable for the purpose of this assessment.

All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with Defence Contamination Management Manual (DCMM) requirements (Defence, 2021).

4. Guideline values

A summary of the current PFAS guideline values for groundwater, porewater and surface water considered relevant to the base is presented as Table 8. The guideline values are largely based upon:

– The PFAS NEMP (HEPA, 2025) which presents a consolidated set of health- and ecology-based Australian PFAS assessment levels for soil and water that are derived from various guidelines and publications. It is noted that the aquatic ecosystems guideline value for PFOS is lower than the standard LOR that was applied at the porewater and surface water monitoring locations.

– The National Health and Medical Research Council (NHMRC) Australian Drinking Water Guidelines (ADWGs) for PFAS that were published on 25 June 2025 (NHMRC, 2025), after the March 2025 sampling event. It is noted that the ADWG value for PFOS is less than the standard PFAS LOR that was applied at the groundwater monitoring locations.

– The Australian and New Zealand Guidelines (ANZG) for PFOS in freshwater, which were released in March 2026, after the sampling event (ANZG, 2026). In relation to this guideline:

  - The relevant freshwater PFOS value has applied for the marine water data in the Management Area on the basis outlined in the PFAS NEMP whereby freshwater values are nominated as interim marine values in the absence of sufficient data to derive values specific to marine environments.
  - The screening threshold (i.e., 0.0005 µg/L) for triggering assessment of PFOS concentrations in biota has not been considered on the basis that an ERA (RPS, 2018b) has been completed that included measurement of PFAS concentrations in lower trophic level aquatic biota, estimation of PFOS concentrations in fish and shorebirds, and food web modelling to understand risks posed to higher order consumers through bioaccumulation.

It is noted that there is currently no Australian regulatory endorsed screening criteria for risk posed to ecology or human health by PFAS in sediment.

Table 8 Relevant PFAS assessment guideline values

Exposure scenario	Source	Assessment guideline value (µg/L)				
		PFOS	PFHxS	PFOS+ PFHxS	PFOA	PFBS
Groundwater						
Health: potable use of groundwater	NHMRC (2025)	0.008	0.03	-	0.2	1
Porewater and surface water						
Health: Recreational water use	PFAS NEMP	2	2	2	10	-
Ecology: aquatic ecosystems (99% species protection)	PFAS NEMP / ANZG (2026)	0.02	-	-	19	-

It is important to note that an Ecological Risk Assessment (ERA) (RPS, 2018b) has been completed for the base to assess the potential risks to the environment associated with presence of PFAS within the Management Area. While the OMP evaluates PFAS concentration data with reference to the ecology-based screening criteria identified in Table 8, decision-making concerning changes to risks posed to ecological receptors within the Management Area should continue to be made with reference to the ERA conclusions and the dataset that informed it.

5. Field observations and results

5.1 General observations

The sampling event was completed over ten days between 10 and 21 March 2025. The weather conditions and general observations (including activities that may impact the monitoring program) recorded during the sampling event are summarised in Table 9.

Table 9 General Observations

Items	Observations
Weather Conditions	During the sampling event the weather was mostly dry and warm, with daily maximum temperatures ranging between 22.9 ˚C (19 March) and 30.5 ˚C (17 March). 7.6 mm and 0.2 mm of rainfall were recorded on 14 and 15 March respectively. No other rainfall was recorded during the sampling event. Information obtained from Garden Island HSF (Station ID 009256) (Bureau of Meteorology, 2025).
Estate Management Works, Training Activities and/or Construction Works.	Construction of a new building was underway to the west of the AVCAT Storage Facility source area. GHD understands these works were unrelated to the PMAP.

5.2 Field observations and measurements

The observations and measurements recorded during the field activities for the March 2025 quarterly sampling event are summarised in Table 10. Field notes are presented in Appendix F.

Table 10 Summary of field observations and measurements

Item	Description
Access and sample collection	Most sampling locations were accessible and able to be sampled. Some groundwater locations were unable to be sampled due to being blocked or inaccessible (refer to Table 3). With reference to Table C1 in Appendix C, the measured well depth in some monitoring wells (i.e., MW121, MW123, MW193, MW195D, MW255, MW256, MW257, MW289, MW468, MW500), when compared to the constructed well depth, suggests sediment may have accumulated within the monitoring wells. The wells were still able to be sampled. Monitoring well MW202 was missing its cap though was still able to be sampled.
Water and sediment observations	Groundwater samples were predominantly colourless, pale brown, pale yellow, or pale grey, with low to moderate sediment load. No sheens or organic films were noted at any of the groundwater locations. A slight to moderate organic or sulfidic odour was noted at most locations. Hydrocarbon odours were noted at MW553, MW240, MW249, MW496, MW516, MW236, MW214, MW220, MW224, MW539, MW112, MW121 and MW500. Porewater samples were predominately colourless with no or low sediment load and no sheen. Most locations were noted to have no odour or a slight organic odour. No sheens or organic films were observed at any locations. Surface water samples were predominantly clear and colourless with low turbidity, no sediment load and no odour. Locations where large seaweed deposits were noted on the beach had low to medium turbidity and a low sediment load. Sediment was mostly moist to saturated, pale yellow to light brown/grey, fine to medium grained beach sand. Locations with large seaweed deposits on the beach were found to have organic matter (i.e., decaying seaweed) present within the sediment samples. A slight organic odour was notified at these locations.
Groundwater flow direction	The calculated groundwater elevations (m AHD) are presented in Table C1 in Appendix C. Groundwater elevations across the base at the time of the sampling event ranged from -0.652 (MW269) to 1.366 m AHD (MW255), which is comparable with the historical range. Inferred groundwater contours are presented in Figure 3 to Figure 7 in Appendix A. Groundwater flow direction across the base at the time of the sampling event is summarised

Item	Description
	below. Generally, groundwater flow was towards the coast, with inward flow and mounding in some areas, likely as a result of tidal influence, which is consistent with previous findings. **Fire Training Area** Generally east south-easterly towards the Cockburn Sound. Some mounding is evident surrounding MW121 in the southern portion of the source area. **Demolition Ground** Westerly (i.e., inward) groundwater flow, possibly associated with tidal influence from the adjoining Cockburn Sound. **Wastewater Treatment Plant** Generally north-easterly flow towards the Cockburn Sound. **Helicopter Support Facility** Generally a radial flow extending outward from MW127 and MW126 towards the Cockburn Sound and the southern coast of Garden Island. **Main base area** Generally south-westerly towards the Cockburn Sound.
Geochemical parameters	Water geochemical parameters were measured during the collection of water samples. The readings are presented in Tables C1, C2 and C3 in Appendix C and are summarised below: **Groundwater** – Temperature ranged from 20.3 ˚C (MW216) to 30.5 ˚C (MW149) – pH ranged from 7.02 (MW126) to 8 (MW255) indicating neutral to alkaline conditions. – EC ranged from 374.9 µS/cm (MW255) to 44,826 µS/cm (MW125) indicating fresh to highly saline conditions. – TDS ranged from 243.7 mg/L (MW255) to 29,131 mg/L (MW125) indicating fresh to highly saline conditions. – DO ranged from 0.37 mg/L (MW199) to 6.71 mg/L (MW217) indicating poor to moderately oxygenated conditions. – ORP ranged from -280.1 mV (MW126) to 100.3 mV (MW166) indicating both reducing and oxidising conditions. **Porewater** – Temperature ranged from 22.9 ˚C (PW374) to 30.4 ˚C (PW304). – pH ranged from 7.06 (PW346) to 8.17 (PW415) indicating neutral to alkaline conditions. – EC ranged from 4,180 µS/cm (PW304) to 63,354.0 µS/cm (PW357) indicating moderately saline to highly saline conditions. – TDS ranged from 799 mg/L (PW368) to 41,152 mg/L (PW357) indicating marginally saline to highly saline conditions. – DO ranged from 0.88 mg/L (PW346) to 4.99 mg/L (PW352) indicating very low to moderately oxygenated conditions. The DO recorded at PW378 (25.4 mg/L) is considered erroneous. – Redox ranged from -158.8 mV (PW346) to 121.5 mV (PW350) indicating both reducing and oxidising conditions. **Surface water** – Temperature ranged from 17.5 ˚C (SW319) to 28.8 ˚C (SW410). – pH ranged from 7.38 (SW406) to 8.88 (SW150) indicating neutral to basic conditions. – EC ranged from 29,658 µS/cm (SW309) to 55,919 µS/cm (SW372) indicating highly saline conditions. – TDS ranged from 18,633 mg/L (SW410) to 36,400 mg/L (SW373) indicating highly saline conditions. – Dissolved oxygen ranged from 0.46 mg/L (SW060) to 9.26 mg/L (SW047) indicating poor to well oxygenated conditions. – Redox ranged from -469.5 mV (SW318) to 346.2 (SW371) mV indicating both reducing and oxidising conditions.

5.3 Summary of analytical results

The PFAS analytical results for groundwater, surface water, sediment and porewater from this sampling event are presented in Table C4 to C7 in Appendix C and are summarised in Figure 8 to Figure 13 in Appendix A.

5.3.1 Groundwater

60 primary groundwater samples were analysed for PFAS, with:

– 27 samples reporting **PFBS** concentrations above the LOR. Three of these were above the ADWG value (1 µg/L) namely, MW256 (1.77 µg/L), MW258 (1.13 µg/L) and MW171 (1.37 µg/L).
– 36 samples reporting **PFOS** concentrations above the LOR. All of these reported concentrations above the ADWG value (0.008 µg/L), noting that the LOR that was applied is greater than the ADWG value. 24 samples reported PFOS concentrations below the LOR (i.e., <0.01) and it therefore cannot be determined whether PFOS concentrations in these samples were above or below the ADWG value.
– 40 samples reporting **PFHxS** concentrations above the LOR. Of these, 35 samples reported concentrations greater than the ADWG value (0.03 µg/L).
– 27 samples reporting **PFOA** concentrations above the LOR. Of these, 11 samples reported concentrations greater than the ADWG value (0.2 µg/L).

The additional monitoring well sampled, MW539, located in the Helicopter Support Facility and targeting a deeper portion of the aquifer (i.e., screened from 16.5 to 20.5 m bgl), reported PFAS concentrations above the LOR including PFBS (0.17 µg/L), PFOS (1.3 µg/L), PFHxS (0.84 µg/L) and PFOA (0.1 µg/L). The PFOS and PFHxS concentrations exceed the ADWG values (0.008 and 0.03 µg/L respectively).

A summary of groundwater locations where concentrations were greater than those previously reported (i.e., first-time detections or new maximums) is presented as Table 11.

Table 11 Deviations from historical dataset – groundwater analytical results

Item	Sample location	PFBS (µg/L)		PFHxS (µg/L)		PFOA (µg/L)		PFOS (µg/L)	
		March 2025	Previous max.	March 2025	Previous max.	March 2025	Previous max.	March 2025	Previous max.
First-time detection	MW539^	0.17	-	0.84	-	0.1	-	1.3	-
New historical maximum	MW124	0.33*	0.12	No new maximum		No new maximum		No new maximum	
	MW125	0.31	0.23	1.14	0.98	No new maximum		No new maximum	
	MW127	No new maximum		0.03	0.02	No new maximum		0.02*	0.007
	MW257	No new maximum		No new maximum		No new maximum		0.41	0.36
	MW539^	0.17	-	0.84	-	0.1	-	1.3	-

*Split duplicate sample result

^First-time detections and new maximum concentrations reported at MW539 reflect the well having been sampled for the first-time as part of the OMP in the March 2025 sampling event.

5.3.2 Porewater

In summary, 38 primary porewater samples were analysed for PFAS, with:

– Seven samples reporting a **PFOS** concentration above the LOR. Four of these reported concentrations equal to the aquatic ecosystems guideline value (0.02 µg/L) and another four (PW304, PW346, PW368 and PW369) reported concentrations exceeding the value.
– Four samples reporting a **PFHxS** concentration above the LOR. All reported concentrations were less than the recreational guideline value (2 µg/L).
– Nine samples reporting a **PFOS+PFHxS** concentration above the LOR. All reported concentrations were less than the recreational guideline value (2 µg/L).

– One sample (PW405) reporting a **PFOA** concentration above the LOR. The reported concentration was less than the aquatic ecosystems guideline value (19 µg/L) and the recreational guideline value (10 µg/L).

A summary of porewater locations where concentrations were greater than those previously reported (i.e., first-time detections or new maximums) is presented as Table 12.

Table 12 Deviations from historical dataset – porewater monitoring locations

Item	Sample location	PFOS		PFHxS		PFOS+PFHxS		PFOA	
		March 2025	Previous max.	March 2025	Previous max.	March 2025	Previous max.	March 2025	Previous max.
First-time detections	PW375	No first-time detection		0.02	<0.01	No first-time detection		No first-time detection	
New historical maximum	PW375	No new maximum		0.02	<0.01	No new maximum		No new maximum	
	PW405	No new maximum		0.16	0.06	0.16	0.06	0.08	0.01

5.3.3 Surface water

34 primary surface water samples were analysed for PFAS. All PFAS were reported at concentrations below the LOR and therefore, there were no first-time detections or new maximum PFAS concentrations in surface water samples.

5.3.4 Sediment

36 primary sediment samples were analysed for PFAS compounds, with:

– No samples reporting a **PFBS** concentration above the LOR.
– Five samples reporting a **PFOS** concentration above the LOR. This included SD304 and SD367 to SD369, all associated with the WWTP area, with concentrations ranging from 0.0002 to 0.0013 mg/kg, and SD346, associated with the accommodation area, with a concentration of 0.0029 mg/kg.
– Five samples reporting a **PFHxS+PFOS** concentration above the LOR, with concentrations equal to the PFOS concentrations outlined above (i.e., all samples comprised PFOS only).
– No samples reporting a **PFHxS** concentration above the LOR.
– No samples reporting a **PFOA** concentration above the LOR.

There were no first-time detections or new maximum PFAS concentrations in sediment samples.

6. Summary

The findings and recommended actions from the March 2025 sampling event are summarised in Table 13.

Table 13 Summary of sampling event

Item	Comment	Recommended Action
Access to sampling locations	All locations were accessible apart from MW196 at the WWTP (refer to Section 2.2).	In all cases, hydraulically down-gradient locations (i.e., closer to the receiving environment) were able to be sampled to provide an assessment of risks to the marine environment which is the primary sensitive receptor for the base. Subsequent monitoring events will seek to obtain access to MW196 via base personnel. Access was again not possible at the March 2025 event though the well was sampled at the September 2025 event (reported on separately). Replacement/repair of MW239 and wells that accumulated sediment is not recommended as a matter of priority at this time. The forthcoming OMP Revision will review the value of the monitoring well in the context of the OMP objectives and make a recommendation for repair, re-installation or otherwise. A new well cap shall be fitted to MW202 during a future sampling event.
Location unable to be sampled, inaccessible or dry	With reference to Section 2.2, MW239 in the AVCAT Storage and Fuel Farm was blocked and unable to be sampled. MW282 was not sampled due to field error (with adjacent deeper monitoring well MW539 incorrectly sampled instead). As noted in Section 5.1, the measured well depth in some monitoring wells suggests sediment may have accumulated within the monitoring wells. The wells were still able to be sampled and the recorded PFAS concentrations were within the historical range. Monitoring well MW202 was missing its cap though was still able to be sampled.	
Analytical results	60 groundwater samples, 38 porewater samples, 34 surface water samples and 36 sediment samples were analysed. Concentrations recorded were generally consistent with historical data.	Locations will be sampled again during the next OMP sampling event. Data will be evaluated further within the context of the OMP objectives (refer to Section 1.1) as part of the forthcoming OMR. The requirement to apply a non-standard LOR at selected monitoring locations to inform a suitable risk assessment will be considered as part of the OMR and forthcoming OMP Revision process.
First-time detections of PFBS, PFHxS, PFOA and/or PFOS	First-time detections were identified at groundwater monitoring location MW539, which was sampled for the first-time as part of the OMP during the March 2025 sampling event, and porewater monitoring location PW375, which is associated with the Dredged Sediments source area. The detected concentration at PW375 was only marginally greater than the LOR (i.e., a PFHxS concentration of 0.02 µg/L).	
New historical maximum concentrations	New historical maximum concentrations were reported at groundwater monitoring locations MW124, MW125, MW127 (in the Fire Training Area) and MW257 (in the Flammable/Hazardous Goods and Waste Storage source area). New historical maximum concentrations were also identified at groundwater monitoring location MW539, reflecting the well having been sampled for the first-time as part of the OMP during the March 2025 sampling event.	
New exceedance of human health guideline value	Numerous groundwater monitoring locations recorded PFAS concentrations in excess of the revised ADWGs that were released in June 2025, after the sampling event. It is noted that the standard LOR that was applied (i.e., <0.01 µg/L) exceeds the revised ADWG for PFOS (0.008 µg/L). GHD understands that groundwater is not abstracted on the base for potable or non-potable use. Potable	

	water for Garden Island is supplied from the Rockingham town water supply (GHD, 2025).	
New exceedance of adopted guideline values?	No surface water or porewater locations reported new exceedances of the adopted ecological guideline values for PFOS and/or PFOA.

8. Limitations

This report has been prepared by GHD for Department of Defence and may only be used and relied on by Department of Defence for the purpose agreed between GHD and Department of Defence as set out in Section 1.2 of this report.

GHD otherwise disclaims responsibility to any person other than Department of Defence arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.

The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.

The opinions, conclusions and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.

The opinions, conclusions and any recommendations in this report are based on information obtained from, and testing undertaken at or in connection with, specific sample points. Site conditions at other parts of the site may be different from the site conditions found at the specific sample points.

Investigations undertaken in respect of this report are constrained by the particular site conditions, such as the location of buildings, services and vegetation. As a result, not all relevant site features and conditions may have been identified in this report.

The opinions, conclusions and any recommendations in this report are based on assumptions made by GHD described in this report. GHD disclaims liability arising from any of the assumptions being incorrect.

GHD has prepared this report on the basis of information provided by Department of Defence and others who provided information to GHD (including Government authorities)], which GHD has not independently verified or checked beyond the agreed scope of work. GHD does not accept liability in connection with such unverified information, including errors and omissions in the report which were caused by errors or omissions in that information.

Appendix B

Data validation

Appendix B

HMAS Stirling – March 2025 QA/QC Evaluation

The QA and QC procedures were undertaken in accordance with the ASC NEPM and the *Assessment and management of contaminated sites* (DWER 2021).

QA involves all the actions, procedures, checks and decisions undertaken to ensure the representativeness and integrity of samples and the accuracy and reliability of analytical results (NEPC 2013). QC involves protocols to monitor and measure the effectiveness of QA procedures.

B-1 Fieldwork Program

Field QA/QC procedures and compliance during the investigation are summarised in Table 1 below, with exceptions detailed in the following subsections.

Table 1 Summary of fieldwork QA/QC compliance

QA/QC element	Requirement	Requirement adhered to?	Information / data acceptable?
Sampling methods	All sampling methods outlined in the HMAS Stirling OMP SAQP (GHD 2025) were adhered to.	Yes	Yes
Recording keeping	Detailed records of field activities were maintained with the use of electronic or paper field sheets and quality control sample registers.	Yes	Yes, see Appendix F
CoC documentation	The CoC documentation was completed for each batch of samples, identifying the names of the samplers, the type of sample, the collection date, the analyses to be performed, sample preservation methods, and time the samples were relinquished to the courier.	Yes	Yes, see Appendix F
Sample labelling	Samples were properly labelled, showing reference number, sample ID, date of collection, sampler name and preservation techniques.	Yes	Yes
Sample containers	Samples were collected in appropriate laboratory supplied containers with suitable preservation methods (where required).	Yes	Yes
Sample storage and transport	Samples were stored in a chilled esky immediately after sampling prior to submission to the laboratory. Samples were kept in a chilled esky during delivery with CoC documentation. Samples were received at the laboratory at the recommended temperature (4 °C).	Yes, with exceptions	Yes, see Section B-1.1.
Decontamination	Reusable field equipment (e.g. interface meter) were appropriately decontaminated using Liquinox between each sampling location.	Yes	Yes
Rinsate blanks	Rinsate samples were collected by the sampler on each day following decontamination of reusable sampling equipment. Analysis of rinsate blanks reported concentrations below laboratory LOR indicating equipment was decontaminated appropriately.	Yes	Yes, see Section B-1.2.
Field blanks	Field blanks were collected by the sampler on each day to estimate potential contamination of a sample during the collection procedure. Analysis of field	Yes	Yes, see Section B-1.2.

QA/QC element	Requirement	Requirement adhered to?	Information / data acceptable?
	blanks reported concentrations below laboratory LOR indicating no cross contamination occurred as a result of ambient conditions during sampling.		
Duplicate samples	Blind and split duplicate samples were collected for analysis by the primary and secondary laboratories, respectively (at a frequency of at least one pair per 10 primary samples). RPDs calculated for the duplicate samples were at or below 30%.	Yes, with exceptions	Yes, see Section B-1.3.2.

B-1.1 Sample containers, storage, and transport

All samples were collected in appropriate laboratory supplied containers with suitable preservation methods (where applicable).

To aid sample integrity, all samples were promptly placed into a chilled esky (with double bagged ice) following the completion of sampling. Eskies were delivered to the primary laboratory (ALS Environmental) and secondary laboratory (Eurofins) as soon as practicable via courier.

As summarised in Table 2, all six sample receipts from primary and secondary laboratories noted the samples were higher than the recommended temperature (4 °C). However, these receipts also noted that an attempt to chill the samples and therefore it is considered that reasonable attempt to maintain the recommended sample temperature was made.

Table 2 Summary of sample receipt temperatures

Lab report number	Temperature (°C)	Earliest Sample Date	Lab Received Date	Comments
EP2404110	11.5	14/03/2025	18/03/2025	“Ice present”
EP2503930	11.5	10/03/2025	18/03/2025	“Ice present”
EP2505355	8.0	18/03/2025	24/03/2025	“Ice present”
EP2504356	8.0	17/03/2025	24/03/2025	“Ice present”
1198980	3.6	10/03/2025	17/03/2025	“Attempt to chill was evident”
1201174	16.8	21/03/2025	24/03/2025	“Attempt to chill was evident”

B-1.2 Quality assurance – blank samples

The groundwater QA samples collected during this sampling event were:

– **Rinsate blanks**: Rinsate blank samples are water samples collected from decontaminated, reused field equipment and were used primarily to assess whether the decontamination procedure was effective and if cross contamination has led to positive observations in subsequent samples. Rinsate samples were collected by pouring laboratory supplied rinsate water over reusable sampling equipment (e.g. interface probe) and collecting it in laboratory supplied containers. Rinsate samples were then transferred to a chilled cooler for sample preservation prior to and during transport to the testing laboratory.

– **Field blanks**: Field blank samples were used to estimate contamination of a sample during the collection procedure. Field blank samples were collected by pouring laboratory supplied rinsate water into laboratory supplied bottles onsite and sent to the laboratory for analysis along with other samples.

The blank samples collected and analysed as part of the quality assurance program are summarised in Table 3. All analyte concentrations in the blanks were below the laboratory LOR. The tabulated blank sample results are shown in Table QC.1 in Attachment 1.

Table 3 Summary of rinsate, field and transport blanks

Lab report number	Sample type	Sample ID	Below LOR
EP2404110	Rinsate Blank	0089_QC304_250313	Yes
		0089_QC305_250314

		0089_QC309_250320	
		0089_QC310_250321	
	Field Blank	0089_QC407_250318	Yes
		0089_QC408_250319	
		0089_QC409_250320	
		0089_QC410_250321	

B-1.3 Quality control – duplicate samples

The QC samples collected during the investigation were:

– **Blind duplicates**: Blind duplicate samples were used to identify the variation in the analyte concentration between samples from the same sampling point and the repeatability of the laboratory's analysis.

– **Split duplicates**: Split duplicate samples were used to provide an indication of the repeatability of the results between laboratories.

Field duplicate samples (blind and split) were collected in replicate bottles during sampling. The required analyses were performed by ALS Laboratory group (primary laboratory) and Eurofins (secondary laboratory), both of whom are NATA accredited.

B-1.3.1 Sample collection frequency

Based on the OMP SAQP (GHD, 2025), one pair of duplicates (blind and split) was required to be collected and analysed per 10 primary PFAS samples. The frequency of groundwater duplicates collected for this assessment is summarised in Table 4.

Table 4 Duplicate sampling frequency summary

Matrix	Rate	Expected number of duplicate pairs	Number of blind duplicate samples collected	Number of split duplicate samples collected
Water	1 duplicate pair per 10 primary samples	14 (132 primary samples)	16	16
Sediment	1 duplicate pair per 10 primary samples	4 (36 Primary samples)	5	5

B-1.3.2 Relative percentage difference calculations

RPD calculations are used to assess how closely primary, blind duplicate and split duplicate sample results match. RPDs are a quantitative measure of the accuracy of the analytical results and are calculated in accordance with the procedure described in AS 4482.1 – 2005 (Standards Australia 2005). According to AS 4482.1 – 2005, typical RPDs are expected to range between 30% and 50%; however, this may be higher for organics and for low concentrations of analytes.

RPD results were considered acceptable if they were less than or equal to 30%. The only exception to this was when concentrations within the primary and blind or split sample were less than ten times the laboratory LOR. In this case, a greater RPD value is considered acceptable.

Where a result is reported below the laboratory LOR for one of the paired samples, the sample was assigned a concentration equal to the LOR for RPD calculation purposes. This is based on the consideration that the chemical may be present at a concentration just below the laboratory LOR or not present at all (i.e. the concentration is zero).

Water RPDs

For the water monitoring (including groundwater, surface water and potable water), a total of 1,023 RPDs were calculated, and 53 RPDs (i.e., 5.18%) exceeded the adopted (conservative) 30% RPD acceptable limit. 21 of these RPDs were higher than the 30% RPD limit, but the primary and/or duplicate sample concentrations were lower than ten times the laboratory LOR and were therefore considered acceptable. 921 RPDs were expressed as zero as both the primary and duplicate/split sample concentrations were less than the laboratory LOR. A summary of these exceedances is detailed in Table 5 and full calculations are provided in Table QC.2 in Attachment 1.

The RPD values greater than the adopted threshold of 30% (where the primary and/or duplicate sample concentrations were greater than 10 times the applied LOR) are considered to have limited impact on the overall data quality given the low proportion of outliers relative to the wider dataset and noting the reported concentrations in the duplicate pairs were within the same order of magnitude.

Table 5 Summary of water RPD exceedances

Primary & Duplicate Field IDs (Type)	Analyte	RPD	Primary Concentration	Duplicate Concentration	Concentrations less than 10 x the LOR??
0089_MW228_250310 / 0089_QC203_250310 (split duplicate)	Perfluorobutane sulfonic acid (PFBS)	40%	0.28 µg/L	0.42 µg/L	No

	Perfluorohexane sulfonic acid (PFHxS)	100%	<0.01 µg/L	0.03 µg/L	Yes
	Sum of PFHxS and PFOS	133%	<0.01 µg/L	0.05 µg/L	Yes

Sediment RPDs

For the sediment monitoring a total of 320 RPDs were calculated and there were no exceedances of the adoped 30% RPD acceptable limit. 316 RPDs were expressed as zero both the primary and duplicate/split sample concentrations were less than the laboratory LOR.

B-2 Laboratory program

Laboratory QA/QC procedures and compliance during the investigation are summarised in Table 6 with exceptions detailed in the following subsections.

Table 6 Summary of laboratory QA/QC compliance

QA/QC element	Requirement	Requirement adhered to?	Information/data acceptable?
NATA accreditation	Analysis of CoPC performed under NATA accreditation or equivalent government endorsed provider of accreditation.	Yes	Yes
Holding times	Laboratory to complete sample extraction and analysis of CoPC within method specifications.	Yes, with exceptions	Yes, see Section B-2.2.6

QA/QC element	Requirement	Requirement adhered to?	Information/data acceptable?
Analytical methods	Sample analyses are to use appropriate methods for each CoPC with regard to Schedule B (3) of the *ASC NEPM* and in accordance with the laboratory's NATA accreditation.	Yes	Yes
Laboratory LORs	Laboratory LORs are below adopted assessment criteria.	LORs were applied per the SAQP (GHD, 2025) and in some cases exceed adopted guidelines values (refer to main report body).	
Laboratory QC results	No method blank, laboratory duplicates, laboratory controls, matrix spike or surrogate spike recovery outliers were identified. Sufficient quantities of laboratory QC analysis was undertaken.	Yes, with exceptions	Yes, see Section 2.2.

B-2.1 Laboratory quality control procedures

Laboratory QC samples incorporated in the analytical process included:

- **Laboratory blind duplicates**: A laboratory blind duplicate provides data on the analytical precision and reproducibility of the analytical result. The laboratory blind duplicate is created by subsampling from one of the primary samples submitted for analysis. Laboratory blind duplicates are analysed at a rate equivalent to one in ten per analytical batch, or one sample per batch if less than 10 samples are analysed in a batch.
- **LCS:** The LCS analysis of either a reference material or a control matrix fortified with analytes representative of the analyte class. The purpose of LCS is to monitor method precision and accuracy independent of the sample matrix. Typically, the percentage recovery of the LCS is compared to the dynamic recovery limit based on the statistical analysis of the processed LCS analysis.
- **Matrix spikes**: Matrix spike sample analysis is the analysis of one or more replicate portions of samples from the batch, after fortifying the additional portion(s) with known quantities of the analyte(s) of interest. The percentage recovery of target analyte(s) from matrix spike samples is used to determine the bias of the method in the specific sample matrix.
- **Surrogate spikes**: Surrogate spikes provide a means of checking that no gross errors have occurred during any stage of the analytical method leading to significant analyte loss. Surrogate recoveries are similar to the analyte of interest in terms of chemical composition, extractability, and chromatographic conditions (retention time), but which are not normally found in environmental samples. Surrogate compounds are spiked into blanks, standards and samples submitted for organic analyses by gas-chromatographic techniques prior to sample extraction.
- **Method blanks**: Method or analysis blank sample analysis is the analysis of a sample that is as free as possible of the analytes of interest but has been prepared the same as the samples under investigation. The analysis is to ascertain if laboratory reagents, glassware and other laboratory consumables contribute to the observed concentration of analytes in the process batch. If below the maximum acceptable method blank (20% of the practical quantisation limit), the contribution is subtracted from the gross analytical signal for each analysis before calculating the sample analyte concentration. The method blank should return analyte concentrations as 'not detected'.

B-2.2 Laboratory quality control results

Laboratory quality control results were compared against criteria set by ALS Environmental and Eurofins, which are largely based on the *ASC NEPM* and US EPA (2006) methods. The individual testing laboratories conducted an assessment of the laboratory QC program internally; however, the results were also independently reviewed and assessed by GHD. All laboratory quality control measures were within the adopted acceptance criteria with the exception of those described in the subsections below.

The exceptions were limited and comprised a very small proportion of the large number of quality control measures completed for the investigation. Based on this, the exceptions described in the subsections below are not considered to significantly influence data quality.

B-2.2.1 QC sample frequency – outliers

All laboratory QC samples were tested with the expected frequency, except for those summarised in Table 7 QC sample frequency – outliers. These outliers only represent a small portion of the internal lab QC program conducted. Therefore, these minor non-compliances reported for this investigation are not considered to have materially affected the conclusions of this report.

Table 7 QC sample frequency - outliers

Lab report	QC sample type	Method	Actula rate / expected rate (%)
EP2404110	Laboratory Duplicates	PFAS by LCMSMS	7.69 / 10.00
	Matrix Spikes	PFAS by LCMSMS	3.85 / 5.00
EP2503930	Laboratory Duplicates	PFAS by LCMSMS	0.00 / 10.00
	Matrix Spikes	PFAS by LCMSMS	0.00 / 5.00
	Matix Spike (Soil)	PFAS by LCMSMS	4.92 / 5.00
EP2504355	Laboratory Duplicates	PFAS by LCMSMS	0.00 / 10.00
	Matrix Spikes	PFAS by LCMSMS	0.00 / 5.00
EP2504356	Laboratory Duplicates	PFAS by LCMSMS	7.69 / 10.00
	Matrix Spikes	PFAS by LCMSMS	-

B-2.2.2 Matrix spike – outliers

All matrix spikes were of an acceptable recovery. No Matrix spike outliers occurred.

B-2.2.3 Laboratory control spike – outliers

All laboratory control spike outliers were of an acceptable recovery except for the one summarised in Table 8. This outlier only represents a small portion of the internal lab QC program conducted. Therefore, this minor non-compliance is not considered to have materially affected the conclusions of the report.

Table 8 Laboratory control spike outliers

Lab report	Sample ID	Analyte	Data	Limits	Comment
EP2504355	QC-6463938-002 (water)	Perfluorodecanoic acid (PFDA)	162%	71.0 – 129%	Recovery greater than upper control limit

B-2.2.4 Surrogate recovery – outliers

All laboratory surrogates were an acceptable recovery.

B-2.2.5 Duplicate – outliers

Samples were analysed and received acceptable RPDs.

B-2.2.6 Holding time – outliers

Samples were analysed within appropriate holding times.

B-3 Data quality indicator evaluation

An evaluation of the DQIs set for this assessment was undertaken subsequent to field works and laboratory analysis, this evaluation is presented in

Table 9 Data quality indicator evaluation.

DQI	Evaluation criteria	Acceptable?
Completeness	All locations that were proposed to be sampled were sampled where possible. Samples were analysed according to the OMP (GHD 2019).	Yes
	All field documentation is complete and correct, including chain of custody documentation for samples.	Yes
	Field forms and documentation capture all relevant important information.	Yes
	Samples were analysed within appropriate holding times.	Yes
	Appropriate laboratory limits of reporting for comparison to relevant assessment criteria.	Yes
Comparability	Standardised operating procedure for groundwater sampling was adhered to and is in line with relevant guidelines.	Yes
	Field staff were experienced in the sampling of groundwater and were appropriately trained.	Yes
	Consistent laboratory use with consistent analytical methods used.	Yes
	Climatic conditions consistent and considered representative of region.	Yes
Representativeness	Samples were collected in a uniform and consistent manner, therefore representative of the media in the field.	Yes
Precision	Sufficient quantities of field blind and split duplicates were collected to enable comparison within and between laboratories.	Yes
	Sufficient quantities of internal laboratory duplicates were analysed to enable comparison within laboratories.	Yes
	Relative percentage difference calculations show that a large majority of duplicate sample concentrations are within defined difference limits.	Yes
	Field equipment was calibrated by equipment supplier (Appendix G6).	Yes
Accuracy	Sufficient quantities of field blanks, rinsate blanks and transport blanks were collected and analysed, with no results indicating cross contamination.	Yes
	Sufficient quantities of internal laboratory method blanks, surrogate spikes and laboratory control samples were analysed to determine laboratory accuracy, with the large majority of samples within defined limits.	Yes

Based on the results of the evaluation of the QA/QC data described in the previous sections, the reported QA/QC non-compliances are not considered likely to significantly influence the reliability of the analytical data. It is further considered that:

– The field and laboratory quality assurance measures implemented provide a reasonable level of confidence that the data collected and reported is appropriately complete, comparable and representative.
– The field and laboratory quality control measures implemented provide a reasonable level of confidence that the data collected and reported is appropriately accurate and precise.
– The overall review of the QA/QC results indicates that the data collected for the investigation is of acceptable quality upon which to provide an adequate and reliable assessment of the property.

***RPDs have only been considered where a concentration is greater than 1 times the EQL.**

****Elevated RPDs are highlighted as per QAQC Profile settings (Acceptable RPDs for each EQL multiplier range are: 30 (1 - 10 x EQL); 30 (10 - 30 x EQL); 30 (> 30 x EQL))**

*****Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory**

Comments

#1 Reported Analyte LOR is higher than Requested Analyte LOR

#2 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Calibration Report

Multi-Parameter Water Quality Instrument

Customer: GHD
Contact: [redacted]

Manufacturer: YSI
Instrument: Professional Plus with Quatro cable
Serial #: 23G103457
Cable length: 1m (23G100259)

Item	Test	Pass	Comments
Battery	2 x Alkaline C-cells	✓	Voltage reading above 2.9V
	Battery Saver	✓	Automatically turns off after 30 minutes if not used
Connections	Condition	✓	Good, clean
Cable	Condition	✓	Clean, no tears
Display	Operation	✓	
Firmware	Version	✓	4.0.0
Keypad	Operational	✓	
Display	Screen	✓	
Unit	Condition, seals and O-rings	✓	
Monitor housing	Condition	✓	
pH			
Condition		✓	Good, clean
pH millivolts for pH7 calibration range 0 mV ± 50 mV		✓	
pH 4 mV range + 165 to + 180 from 7 buffer mV value		✓	175.50 mV
pH slope		✓	55 to 60 mV/pH, ideal 59mV 58.71
Response time < 90 seconds		✓	
Calibrated and conforms to manufacturer's specifications		✓	
ORP			
Condition		✓	Good, clean
Response time < 90 seconds		✓	
within ± 80mv of reference Zobell Reading		✓	
Calibrated and conforms to manufacturer's specifications		✓	variance range ± 20mV 7 mV
Conductivity			
Condition		✓	Good, clean
Temperature		✓	°C
Conductivity cell constant 5.0 ± 1.0 in GLP file		✓	
Clean sensor reads less than 3 uS/cm in dry air		✓	
Calibrated and conforms to manufacturer's specifications		✓	µs/cm
Dissolved Oxygen			
Condition		✓	Good, clean
DO sensor in use		✓	polarographic
1.25 mil PE membrane (yellow membrane):		✓	
DO Sensor Value		✓	(min 4.31 uA - max 8.00 uA) Avg 6.15 uA
Calibrated and conforms to manufacturer's specifications		✓	ppm

This is to certify that the above instrument has been calibrated to the following specifications:

Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Chris Lemaitre	Laboratory Manager (Perth)	Perth Inorganics, Wangara, WA
John Horwood	Organic Supervisor	Perth Organics, Wangara, WA

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20mL or 125mL bottles have been tested in accordance with the QSM5.4 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP231X: LOR has been raised for particular analyte "PFNS" on sample "EP2504110-002" due to matrix interference.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per tables in USEPA 1633 where listed. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per USEPA 1633 limits where listed. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.

Address	: 999 HAY STREET PERTH WA, AUSTRALIA 6000	Address	: 26 Rigali Way Wangara WA Australia 6065
Telephone	: ----	Telephone	: +61-8-9406 1301
Project	: WA_0089_PFASOMP_25	Date Samples Received	: 18-Mar-2025
Order number	: 12641234/02.2.6	Date Analysis Commenced	: 21-Mar-2025
C-O-C number	: 80322	Issue Date	: 27-Mar-2025
Sampler	: [redacted]		
Site	: Stirling - post summer - 1st week		
Quote number	: EP24GHDSER0016_V5		
No. of samples received	: 32		
No. of samples analysed	: 30		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Laboratory Manager (Perth)	Perth Inorganics, Wangara, WA
[redacted]	Organic Supervisor	Perth Organics, Wangara, WA

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EP2504110**	Page	: 1 of 7
Client	: **GHD PTY LTD**	Laboratory	: Environmental Division Perth
Contact	: [redacted]	Telephone	: +61-8-9406 1301
Project	: WA_0089_PFASOMP_25	Date Samples Received	: 18-Mar-2025
Site	: Stirling - post summer - 1st week	Issue Date	: 27-Mar-2025
Sampler	: [redacted]	No. of samples received	: 32
Order number	: 12641234/02.2.6	No. of samples analysed	: 30

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type		Count		Rate (%)		Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)						
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	2	26	7.69	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)						
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	1	26	3.85	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	Evaluation	
Laboratory Duplicates (DUP)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by negative mode LC-ESI-MS/MS using MRM and isotope dilution or internal standard quantitation. A portion of homogenised sample is extracted along with isotope dilution standards (where commercially available) in a solution of ammonium acetate in acetonitrile/methanol. Where relevant, interferences from co-extracted organics are removed using dispersive clean-up media (dSPE). A portion of extract is combined with an equal volume of reagent water and filtered for instrumental analysis.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
QuECheRS Extraction of Solids	* ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Solid Phase Extraction (SPE) for PFAS in water	* ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

SAMPLE RECEIPT NOTIFICATION (SRN)

Work Order : **EP2504110**

Client	: **GHD PTY LTD**	Laboratory	: Environmental Division Perth

C-O-C number	: 80322	QC Level	: NEPM 2013 B3 & ALS QC Standard
Site	: Stirling - post summer - 1st week		
Sampler	: [redacted]		

Dates

Date Samples Received	: 18-Mar-2025 09:00	Issue Date	: 20-Mar-2025
Client Requested Due Date	: 27-Mar-2025	Scheduled Reporting Date	: **27-Mar-2025**

Delivery Details

Mode of Delivery	: Carrier	Security Seal	: Not Available
No. of coolers/boxes	: 3	Temperature	: 11.5 - Ice present
Receipt Detail	:	No. of samples received / analysed	: 32 / 30

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- Please see scanned COC for sample discrepencies: extra samples , samples not received etc.
- Please direct any queries related to sample condition / numbering / breakages to Sample Receipt (Samples.Perth@alsglobal.com)
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Perth, NATA accreditation no. 825, site no. 15847.
- Please direct any turnaround / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- **pH analysis should be conducted within 6 hours of sampling.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Chris Lemaitre	Laboratory Manager (Perth)	Perth Inorganics, Wangara, WA
David Viner	SENIOR LAB TECH	Perth Organics, Wangara, WA
John Horwood	Organic Supervisor	Perth Organics, Wangara, WA

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20mL or 125mL bottles have been tested in accordance with the QSM5.4 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- Amendment (28/03/2025): This report has been amended and re-released to allow the reporting of additional analytical data, specifically method EP231X for samples 115 & 116.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per tables in USEPA 1633 where listed. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration or as per USEPA 1633 limits where listed. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS and also conform to QSM 5.4 (US DoD) requirements.

Order number	: 12641234/02.2.6	Date Analysis Commenced	: 19-Mar-2025
C-O-C number	: 80251	Issue Date	: 31-Mar-2025
Sampler	: [redacted]		
Site	: OMP week 1		
Quote number	: EP24GHDSER0016_V5		
No. of samples received	: 116		
No. of samples analysed	: 116		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
[redacted]	Laboratory Manager (Perth)	Perth Inorganics, Wangara, WA

[redacted]	Organic Supervisor	Perth Organics, Wangara, WA

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**
