

Questions:

I was chasing an update on how many residents/homes are receiving drinking water as a result of possible water contamination in the Tindal/Katherine region?

Also, has the idea of supplying rainwater tanks to homes been progressed?

Response:

As of Wednesday 11 January 2017, Defence is supplying 51 properties in the vicinity of RAAF Base Tindal with alternative drinking water.

Defence will consider the supply of rainwater tanks on a case-by-case basis.
