  - Large international Managed Services business supporting a variety of applications
  - Driven by Customer requirements
  - Employs industry specialists
- Over 1000 staff globally plus Channels.

# Traditional Military Logistics Model

# Today's Military Logistics Model

# In terms of logistics support, at what level is your military?

Military Logistics is underpinned by generational step changes in Information Technology + structural re-design

1

Manual codes and conventions supported by card/manual systems

2

Cap-Badge Support: Non-integrated Wholesale and Retail systems, in supply and maintenance, often by Service (e.g. UK MoD)

3

Joint Logistics Support: Fully integrated materiel management (inclusive of Supply, Maintenance & Finance) across all Services, from Deployed Forces to Corporate and Industry. Modern technology providing a 'single-source of truth.' (e.g. ADF)

4

LogC2 Capability. Fully integrated visualisation and simulation of the Joint Logistics network (including contractor support) as the business flexes to meet operational and Gov't demands. A network of support that can be optimised through simulation.

# Military Extended Enterprise

# Transform your logistics support – Are you ready?
