

**Study of Health Outcomes in  
Aircraft Maintenance Personnel  
(SHOAMP)**

**Phase III**

**Appendices Booklet for the General  
Health and Medical Study**

**September 2004**

---

# List of Appendices

---

## Chapter 1 – Background

Appendix 1A : Activities and occupations associated with F-111 Deseal/Reseal programs .....	2
Appendix 1B : Summary list of F-111 DSRS activities .....	5
Appendix 1C : Terms of Reference .....	6

## Chapter 2 – Overview of the General Health and Medical Study

Appendix 2A : Chart illustrating the rationale for each comparison group .....	13
Appendix 2B : List of mustering categories for the Amberley comparison group (non-technical trades) .....	15
Appendix 2C : List of mustering categories for the Richmond comparison group (technical trades) .....	26
Appendix 2D : Commonwealth Department of Veterans' Affairs advertisement for the General Health and Medical Study .....	32
Appendix 2E : Procedure for defining Amberley comparison cohort .....	33
Appendix 2F : Procedure for defining Richmond comparison cohort.....	34
Appendix 2G : Summary of chemicals and products for Deseal/Reseal activities.....	35
Appendix 2H : Semi-structured interview for DVA classification of exposure .....	46
Appendix 2I : Exposure Questionnaire mailed to all potentially exposed individuals to assess DSRS exposure .....	47
Appendix 2J : Example of summary feedback letter sent to participants and their nominated general practitioner after the health examination .....	65
Appendix 2K : Male version of the Postal Questionnaire.....	69

Appendix 2L : Different items included in the female version of the Postal Questionnaire .....	110
Appendix 2M : Letter to female partners of male participants and Female Partner Questionnaire .....	113
Appendix 2N : Health Examination Booklet.....	119

## **Chapter 3 – Study Population and Recruitment**

Appendix 3A : Letter of support from the Minister for Defence.....	186
Appendix 3B : Letter of support from the Consultative Forum.....	188
Appendix 3C : Information and invitation statement for the General Health and Medical Study .....	189
Appendix 3D : Informed consent statement for the General Health and Medical Study .....	195
Appendix 3E : Australian Defence Force Human Research Ethics Committee "guidelines to volunteers" .....	197
Appendix 3F : Reminder card sent to all non-respondents .....	199
Appendix 3G : Letter confirming the HSA health examination appointment.....	200
Appendix 3H : Guidelines to health examination participants .....	201
Appendix 3I : Travel claim form for health examination participants .....	202
Appendix 3J : Loss of earnings claim form for health examination participants .....	204
Appendix 3K : "Flyer" sent to non-respondents.....	207
Appendix 3L : Round Two and Round Three recruitment into health examinations at Health Services Australia according to date and postcode .....	208

## **Chapter 4 – Exposure**

Appendix 4A : Final exposure classification for health examination only participants .....	212
Appendix 4B : Final participation classification postal questionnaire only participants .....	213

## **Chapter 5 – Measures**

No Appendices

## **Chapter 6 – Analysis**

No Appendices

## **Chapter 7 – Quality Assurance and Ethics**

Appendix 7A : General Health and Medical Study Instruction Manual for nurses.....	216
Appendix 7B : General Health and Medical Study Instruction Manual for doctors.....	244
Appendix 7C : General Health and Medical Study Instruction Manual for psychologists .....	261
Appendix 7D : General Health and Medical Study Instruction Manual for data entry staff.....	302
Appendix 7E : Procedures for back up and return of data to the study team .....	317
Appendix 7F : Letter of approval from The University of Newcastle Human Research Ethics Committee.....	343
Appendix 7G : Letter of approval from the Australian Defence Human Research Ethics Committee .....	344
Appendix 7H : Letter of approval from the Department of Veterans' Affairs Ethics Committee .....	345
Appendix 7I : Immediate feedback letter for participants from HSA clinicians .....	346
Appendix 7J : Standardised proforma for requests for participant information .....	347
Appendix 7K : Confidentiality agreement against disclosure of personal information of participants .....	348

## **Chapter 8 – Potential Confounders**

No Appendices

## Chapter 9 – General Health and Wellbeing

Appendix 9A : Rank of all self-reported symptoms according to chi-square analysis	353
Appendix 9B : Rank of Amberley comparison self-reported symptoms according to frequency.....	359
Appendix 9C : Rank of Richmond comparison self-reported symptoms according to frequency.....	365
Appendix 9D : Rank of exposed self-reported symptoms according to frequency .....	371
Appendix 9E : Self-reported hospitalisation in the past 12 months: Multiple logistic regression summary for all exposed.....	377
Appendix 9F : Self-reported hospitalisation in the past 12 months: Most parsimonious model obtained by logistic regression for all exposed .....	379
Appendix 9G : Self-reported hospitalisation in the past 12 months: Multiple logistic regression where the exposed group are all those in Program 1 .....	380
Appendix 9H : Self-reported hospitalisation in the past 12 months: Multiple logistic regression where the exposed group are all those in Program 2 .....	381
Appendix 9I : Self-reported hospitalisation in the past 12 months: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	382
Appendix 9J : SF-36 Physical Component Summary: Multiple linear regression summary for all exposed .....	384
Appendix 9K : SF-36 Physical Component Summary: Most parsimonious model obtained by stepwise regression for all exposed.....	386
Appendix 9L : SF-36 Physical Component Summary: Multiple linear regression where the exposed group are all those in Program 1.....	387
Appendix 9M : SF-36 Physical Component Summary: Multiple linear regression where the exposed group are all those in Program 2.....	389
Appendix 9N : SF-36 Physical Component Summary: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	391
Appendix 9O : SF-36 Mental Component Summary: Multiple linear regression summary for all exposed.....	393
Appendix 9P : SF-36 Mental Component Summary: Most parsimonious model obtained by stepwise regression for all exposed.....	395

Appendix 9Q : SF-36 Mental Component Summary: Multiple linear regression where the exposed group are all those in Program 1 .....	396
Appendix 9R : SF-36 Mental Component Summary: Multiple linear regression where the exposed group are all those in Program 2 .....	398
Appendix 9S : SF-36 Mental Component Summary: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	400
Appendix 9T : Least squares adjusted means for pathology tests .....	403
Appendix 9U : Urinalysis for protein .....	407
Appendix 9V : Urinalysis for blood.....	407
Appendix 9W : Urinalysis for glucose .....	408

## **Chapter 10 – Cardiovascular Health**

Appendix 10A : Postural hypotension systolic: Multiple linear regression summary for all exposed .....	412
Appendix 10B : Postural hypotension systolic: Most parsimonious model obtained by stepwise regression for all exposed.....	415
Appendix 10C : Postural hypotension systolic: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA office .....	416
Appendix 10D : Postural hypotension systolic: Multiple linear regression where the exposed group are all those in Program 1 .....	418
Appendix 10E : Postural hypotension systolic: Multiple linear regression where the exposed group are all those in Program 2 .....	420
Appendix 10F : Postural hypotension systolic: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	422
Appendix 10G : Postural hypotension diastolic : Multiple linear regression summary for all exposed .....	424
Appendix 10H : Postural hypotension diastolic : Most parsimonious model obtained by stepwise regression for all exposed.....	426
Appendix 10I : Postural hypotension diastolic: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA office .....	427
Appendix 10J : Postural hypotension diastolic : Multiple linear regression where the exposed group are all those in Program 1 .....	429

Appendix 10K : Postural hypotension diastolic : Multiple linear regression where the exposed group are all those in Program 2.....	431
Appendix 10L : Postural hypotension diastolic : Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	433
Appendix 10M : Self-reported chest pain: Multiple logistic regression summary for all exposed.....	435
Appendix 10N : Self-reported chest pain: Most parsimonious model obtained by logistic regression for all exposed .....	437
Appendix 10O : Self-reported chest pain: Multiple logistic regression where the exposed group are all those in Program 1 .....	438
Appendix 10P : Self-reported chest pain: Multiple logistic regression where the exposed group are all those in Program 2 .....	440
Appendix 10Q : Self-reported chest pain: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	442
Appendix 10R : Self-reported rapid, pounding or irregular heartbeat: Multiple logistic regression summary for all exposed.....	444
Appendix 10S : Self-reported rapid, pounding or irregular heartbeat: Most parsimonious model obtained by logistic regression for all exposed .....	446
Appendix 10T : Self-reported rapid, pounding or irregular heartbeat: Multiple logistic regression where the exposed group are all those in Program 1 .....	447
Appendix 10U : Self-reported rapid, pounding or irregular heartbeat: Multiple logistic regression where the exposed group are all those in Program 2 .....	449
Appendix 10V : Self-reported rapid, pounding or irregular heartbeat: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	451
Appendix 10W : Self-reported dizziness: Multiple logistic regression summary for all exposed.....	453
Appendix 10X : Self-reported dizziness: Most parsimonious model obtained by logistic regression for all exposed .....	455
Appendix 10Y : Self-reported dizziness: Multiple logistic regression where the exposed group are all those in Program 1 .....	456
Appendix 10Z : Self-reported dizziness: Multiple logistic regression where the exposed group are all those in Program 2 .....	458
Appendix 10AA : Self-reported dizziness: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	460

Appendix 10BB : Self-reported feeling faint or fainting when standing: Multiple logistic regression summary for all exposed .....	462
Appendix 10CC : Self-reported feeling faint or fainting when standing: Most parsimonious model obtained by logistic regression for all exposed .....	464
Appendix 10DD : Self-reported feeling faint or fainting when standing: Multiple logistic regression where the exposed group are all those in Program 1 .....	465
Appendix 10EE : Self-reported feeling faint or fainting when standing: Multiple logistic regression where the exposed group are all those in Program 2.....	467
Appendix 10FF : Self-reported feeling faint or fainting when standing: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	469
Appendix 10GG : Self-reported physician diagnosis of high blood pressure: Multiple logistic regression summary for all exposed .....	471
Appendix 10HH : Self-reported physician diagnosis of high blood pressure: Most parsimonious model obtained by logistic regression for all exposed .....	473
Appendix 10II : Self-reported physician diagnosis of high blood pressure: Multiple logistic regression where the exposed group are all those in Program 1 .....	474
Appendix 10JJ : Self-reported physician diagnosis of high blood pressure: Multiple logistic regression where the exposed group are all those in Program 2.....	476
Appendix 10KK : Self-reported physician diagnosis of high blood pressure: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	478

## **Chapter 11 – Respiratory Health**

Appendix 11A : OfficeMedic Spirocard set up for lung function testing .....	483
Appendix 11B : Calibration procedures for lung function testing .....	485
Appendix 11C : Obstructive airways disease: Multiple logistic regression summary for all exposed .....	487
Appendix 11D : Obstructive airways disease: Most parsimonious model obtained by logistic regression for all exposed.....	489
Appendix 11E : Obstructive airways disease: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre.....	490

Appendix 11F : Obstructive airways disease: Multiple logistic regression where the exposed are all those in Program 1 .....	492
Appendix 11G : Obstructive airways disease: Multiple logistic regression where the exposed are all those in Program 2 .....	494
Appendix 11H : Obstructive airways disease: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	496
Appendix 11I : Self-reported shortness of breath and wheezing: Multiple logistic regression summary for all exposed.....	498
Appendix 11J : Self-reported shortness of breath and wheezing: Most parsimonious model obtained by logistic regression for all exposed .....	500
Appendix 11K : Self-reported shortness of breath and wheezing: Multiple logistic regression where the exposed group are all those in Program 1 .....	501
Appendix 11L : Self-reported shortness of breath and wheezing: Multiple logistic regression where the exposed group are all those in Program 2 .....	502
Appendix 11M : Self-reported shortness of breath and wheezing: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	503
Appendix 11N : Self-reported physician diagnosis of asthma: Multiple logistic regression summary for all exposed .....	504
Appendix 11O : Self-reported physician diagnosis of asthma: Most parsimonious model obtained by logistic regression for all exposed.....	505
Appendix 11P : Self-reported physician diagnosis of asthma: Multiple logistic regression where the exposed group are all those in Program 1 .....	506
Appendix 11Q : Self-reported physician diagnosis of asthma: Multiple logistic regression where the exposed group are all those in Program 2 .....	507
Appendix 11R : Self-reported physician diagnosis of asthma: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	508
Appendix 11S : Self-reported physician diagnosis of bronchitis/emphysema: Multiple logistic regression summary for all exposed.....	509
Appendix 11T : Self-reported physician diagnosis of bronchitis/emphysema: Most parsimonious model obtained by logistic regression for all exposed.....	510
Appendix 11U : Self-reported physician diagnosis of bronchitis/emphysema: Multiple logistic regression where the exposed group are all those in Program 1 .....	511
Appendix 11V : Self-reported physician diagnosis of bronchitis/emphysema: Multiple logistic regression where the exposed group are all those in Program 2 .....	512

Appendix 11W : Self-reported physician diagnosis of bronchitis/emphysema: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	513
---	-----

## **Chapter 12 – Dermatological and Breast Abnormalities**

Appendix 12A : Health examination physician diagnosed dermatitis: Multiple logistic regression summary for all exposed .....	519
Appendix 12B : Health examination physician diagnosed dermatitis: Most parsimonious model obtained by logistic regression for all exposed.....	521
Appendix 12C : Health examination physician diagnosed dermatitis: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre.....	522
Appendix 12D : Health examination physician diagnosed dermatitis: Multiple logistic regression where the exposed group are all those in Program 1.....	524
Appendix 12E : Health examination physician diagnosed dermatitis: Multiple logistic regression where the exposed group are all those in Program 2.....	526
Appendix 12F : Health examination physician diagnosed dermatitis: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	528
Appendix 12G : Skin lesion carcinoma/melanoma: Multiple logistic regression summary for all exposed .....	530
Appendix 12H : Skin lesion carcinoma/melanoma: Most parsimonious model obtained by logistic regression for all exposed .....	532
Appendix 12I : Skin lesion carcinoma/melanoma : Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre.....	533
Appendix 12J : Skin lesion carcinoma/melanoma : Multiple logistic regression where the exposed group are all those in Program 1 .....	535
Appendix 12K : Skin lesion carcinoma/melanoma : Multiple logistic regression where the exposed group are all those in Program 2 .....	537
Appendix 12L : Skin lesion carcinoma/melanoma: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	539
Appendix 12M : Skin lesion, other: Multiple logistic regression summary for all exposed .....	541

Appendix 12N : Skin lesions, other: Most parsimonious model obtained by logistic regression for all exposed .....	543
Appendix 12O : Skin lesions, other: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre .....	544
Appendix 12P : Skin lesions, other: Multiple logistic regression where the exposed group are all those in Program 1 .....	546
Appendix 12Q : Skin lesions, other: Multiple logistic regression where the exposed group are all those in Program 2 .....	548
Appendix 12R : Skin lesions, other: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	550
Appendix 12S : Self-reported psoriasis: Multiple logistic regression summary for all exposed.....	552
Appendix 12T : Self-reported psoriasis: Most parsimonious model obtained by logistic regression for all exposed .....	553
Appendix 12U : Self-reported psoriasis: Multiple logistic regression where the exposed group are all those in Program 1 .....	554
Appendix 12V : Self-reported psoriasis: Multiple logistic regression where the exposed group are all those in Program 2 .....	555
Appendix 12W : Self-reported psoriasis: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	556
Appendix 12X : Self-reported dermatitis: Multiple logistic regression summary for all exposed.....	557
Appendix 12Y : Self-reported dermatitis: Most parsimonious model obtained by logistic regression for all exposed .....	558
Appendix 12Z : Self-reported dermatitis: Multiple logistic regression where the exposed group are all those in Program 1 .....	559
Appendix 12AA : Self-reported dermatitis: Multiple logistic regression where the exposed group are all those in Program 2.....	560
Appendix 12BB : Self-reported dermatitis: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	561
Appendix 12CC : Self-reported rash or skin irritation: Multiple logistic regression summary for all exposed .....	562
Appendix 12DD : Self-reported rash or skin irritation: Most parsimonious model obtained by logistic regression for all exposed.....	563

Appendix 12EE : Self-reported rash or skin irritation: Multiple logistic regression where the exposed group are all those in Program 1 .....	564
Appendix 12FF : Self-reported rash or skin irritation: Multiple logistic regression where the exposed group are all those in Program 2 .....	565
Appendix 12GG : Self-reported rash or skin irritation: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	566
Appendix 12HH : Self-reported skin ulcer: Multiple logistic regression summary for all exposed .....	567
Appendix 12II : Self-reported skin ulcer: Most parsimonious model obtained by logistic regression for all exposed.....	568
Appendix 12JJ : Self-reported skin ulcer: Multiple logistic regression where the exposed group are all those in Program 1.....	569
Appendix 12KK : Self-reported skin ulcer: Multiple logistic regression where the exposed group are all those in Program 2 .....	570
Appendix 12LL : Self-reported skin ulcer: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	571
Appendix 12MM : Self-reported eczema: Multiple logistic regression summary for all exposed .....	572
Appendix 12NN : Self-reported eczema: Most parsimonious model obtained by logistic regression for all exposed.....	573
Appendix 12OO : Self-reported eczema: Multiple logistic regression where the exposed group are all those in Program 1.....	574
Appendix 12PP : Self-reported eczema: Multiple logistic regression where the exposed group are all those in Program 2.....	575
Appendix 12QQ : Self-reported eczema: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	576
Appendix 12RR : Self-reported malignant melanoma: Multiple logistic regression summary for all exposed.....	577
Appendix 12SS : Self-reported malignant melanoma: Most parsimonious model obtained by logistic regression for all exposed .....	578
Appendix 12TT : Self-reported malignant melanoma: Multiple logistic regression where the exposed group are all those in Program 1 .....	579
Appendix 12UU : Self-reported malignant melanoma: Multiple logistic regression where the exposed group are all those in Program 2 .....	580

Appendix 12VV : Self-reported malignant melanoma: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	581
---	-----

## **Chapter 13 – Neurological Outcomes**

Appendix 13A : Vibration perception threshold score, finger: Multiple linear regression summary for all exposed .....	589
Appendix 13B : Vibration perception threshold score, finger: Most parsimonious model obtained by stepwise regression for all exposed .....	591
Appendix 13C : Vibration perception threshold score, finger: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	592
Appendix 13D : Vibration perception threshold score, finger: Multiple linear regression where the exposed group are all those in Program 1 .....	594
Appendix 13E : Vibration perception threshold score, finger: Multiple linear regression where the exposed group are all those in Program 2 .....	596
Appendix 13F : Vibration perception threshold score, finger: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed.....	598
Appendix 13G : Vibration perception threshold score, toe: Multiple linear regression summary for all exposed .....	600
Appendix 13H : Vibration perception threshold score, toe: Most parsimonious model obtained by stepwise regression for all exposed .....	602
Appendix 13I : Vibration perception threshold score, toe: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre.....	604
Appendix 13J : Vibration perception threshold score, toe: Multiple linear regression where the exposed group are all those in Program 1 .....	606
Appendix 13K : Vibration perception threshold score, toe: Multiple linear regression where the exposed group are all those in Program 2 .....	608
Appendix 13L : Vibration perception threshold score, toe: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed.....	610
Appendix 13M : Vibration perception category, finger: Multiple logistic regression summary for all exposed .....	612
Appendix 13N : Vibration perception category, finger: Most parsimonious model obtained by logistic regression for all exposed .....	614

Appendix 13O : Vibration perception category, finger: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	615
Appendix 13P : Vibration perception category, finger: Multiple logistic regression where the exposed group are all those in Program 1 .....	617
Appendix 13Q : Vibration perception category, finger: Multiple linear regression where the exposed group are all those in Program 2 .....	619
Appendix 13R : Vibration perception category, finger: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed.....	621
Appendix 13S : Vibration perception category, toe: Multiple logistic regression summary for all exposed .....	623
Appendix 13T : Vibration perception category, toe: Most parsimonious model obtained by stepwise regression for all exposed .....	625
Appendix 13U : Vibration perception category, toe: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	626
Appendix 13V : Vibration perception category, toe: Multiple linear regression where the exposed group are all those in Program 1 .....	628
Appendix 13W : Vibration perception category, toe: Multiple linear regression where the exposed group are all those in Program 2 .....	630
Appendix 13X : Vibration perception category, toe: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed.....	632
Appendix 13Y : Any self-reported motor symptom: Multiple logistic regression summary for all exposed .....	634
Appendix 13Z : Any self-reported motor symptom: Most parsimonious model obtained by stepwise regression for all exposed .....	636
Appendix 13AA : Any self-reported motor symptom: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	637
Appendix 13BB : Any self-reported motor symptoms: Multiple linear regression where the exposed group are all those in Program 1 .....	639
Appendix 13CC : Any self-reported motor symptoms : Multiple linear regression where the exposed group are all those in Program 2 .....	641
Appendix 13DD : Any self-reported motor symptoms: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed.....	643

Appendix 13EE : Any self-reported sensory symptoms: Multiple logistic regression summary for all exposed .....	645
Appendix 13FF : Any self-reported sensory symptom: Most parsimonious model obtained by stepwise regression for all exposed .....	647
Appendix 13GG : Any self-reported sensory symptom: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre.....	648
Appendix 13HH : Any self-reported sensory symptoms: Multiple linear regression where the exposed group are all those in Program 1 .....	650
Appendix 13II : Any self-reported sensory symptoms: Multiple linear regression where the exposed group are all those in Program 2.....	652
Appendix 13JJ : Any self-reported sensory symptoms: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	654
Appendix 13KK : Colour vision abnormal CCI : Multiple linear regression summary for all exposed .....	656
Appendix 13LL : Colour vision abnormal CCI: Most parsimonious model obtained by stepwise regression for all exposed .....	658
Appendix 13MM : Colour vision abnormal CCI: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre.....	659
Appendix 13NN : Colour vision abnormal CCI: Multiple logistic regression where the exposed group are all those in Program 1 .....	661
Appendix 13OO : Colour vision abnormal CCI: Multiple logistic regression where the exposed group are all those in Program 2.....	663
Appendix 13PP : Colour vision abnormal CCI: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	665
Appendix 13QQ : Colour vision clinical diagnosis : Multiple logistic regression summary for all exposed .....	667
Appendix 13RR : Colour vision clinical diagnosis: Most parsimonious model obtained by stepwise regression for all exposed .....	669
Appendix 13SS : Colour vision clinical diagnosis: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre.....	670
Appendix 13TT : Colour vision clinical diagnosis: Multiple logistic regression where the exposed group are all those in Program 1 .....	672

Appendix 13UU : Colour vision clinical diagnosis: Multiple logistic regression where the exposed group are all those in Program 2 .....	674
Appendix 13VV : Colour vision clinical diagnosis: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	676
Appendix 13WW : Olfaction score: Multiple linear regression summary for all exposed .....	678
Appendix 13XX : Olfaction score : Most parsimonious model obtained by stepwise regression for all exposed.....	680
Appendix 13YY : Olfaction score: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre.....	681
Appendix 13ZZ : Olfaction score: Multiple linear regression where the exposed group are all those in Program 1.....	683
Appendix 13AAA : Olfaction score: Multiple linear regression where the exposed group are all those in Program 2.....	685
Appendix 13BBB : Olfaction score: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	687
Appendix 13CCC : Self-reported increased sensitivity to smells: Multiple logistic regression summary for all exposed .....	689
Appendix 13DDD : Self-reported increased sensitivity to smells: Most parsimonious model obtained by stepwise regression for all exposed.....	690
Appendix 13EEE : Self-reported increased sensitivity to smells: Multiple logistic regression where the exposed group are all those in Program 1.....	691
Appendix 13FFF : Self-reported increased sensitivity to smells: Multiple logistic regression where the exposed group are all those in Program 2.....	692
Appendix 13GGG : Self-reported increased sensitivity to smells: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	693

## **Chapter 14 – Sexual Function and Reproductive Health**

Appendix 14A : Self-reported loss of interest in sex: Multiple logistic regression summary for all exposed.....	698
Appendix 14B : Self-reported loss of interest in sex: Most parsimonious model obtained by logistic regression for all exposed .....	700

Appendix 14C : Self-reported loss of interest in sex: Multiple logistic regression where the exposed group are all those in Program 1 .....	701
Appendix 14D : Self-reported loss of interest in sex: Multiple logistic regression where the exposed group are all those in Program 2.....	703
Appendix 14E : Self-reported loss of interest in sex: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	705
Appendix 14F : Self-reported problems with sexual functioning: Multiple logistic regression summary for all exposed.....	707
Appendix 14G : Self-reported problems with sexual functioning: Most parsimonious model obtained by logistic regression for all exposed .....	709
Appendix 14H : Self-reported problems with sexual functioning: Multiple logistic regression where the exposed group are all those in Program 1 .....	710
Appendix 14I : Self-reported problems with sexual functioning: Multiple logistic regression where the exposed group are all those in Program 2 .....	712
Appendix 14J : Self-reported problems with sexual functioning: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	714
Appendix 14K : Erectile dysfunction: Multiple logistic regression summary for all exposed.....	716
Appendix 14L : Erectile dysfunction: Most parsimonious model obtained by logistic regression for all exposed .....	718
Appendix 14M : Erectile dysfunction: Multiple logistic regression where the exposed group are all those in Program 1 .....	719
Appendix 14N : Erectile dysfunction: Multiple logistic regression where the exposed group are all those in Program 2 .....	721
Appendix 14O : Erectile dysfunction: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	723
Appendix 14P : Overall sexual function: Multiple linear regression summary for all exposed.....	725
Appendix 14Q : Overall sexual function: Most parsimonious model obtained by stepwise regression for all exposed .....	727
Appendix 14R : Overall sexual function: Multiple linear regression where the exposed group are all those in Program 1 .....	728
Appendix 14S : Overall sexual function: Multiple linear regression where the exposed group are all those in Program 2 .....	730

Appendix 14T : Overall sexual function: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	732
Appendix 14U : International Index of Erectile Function: internal consistency and factor structure.....	735
Appendix 14V : Dichotomised pregnancy results (live birth vs other) and covariates by exposure group.....	736
Appendix 14W : Live births vs still births and miscarriage: Multiple logistic regression summary for all exposed.....	738
Appendix 14X : Live births vs still births and miscarriage: Most parsimonious model obtained by stepwise logistic regression for all exposed .....	739
Appendix 14Y : Live births vs still births and miscarriage: Multiple logistic regression where the exposed group are all those in Program 1 .....	740
Appendix 14Z : Live births vs still births and miscarriage: Multiple logistic regression where the exposed group are all those in Program 2 .....	741
Appendix 14AA : Live births vs still births and miscarriage: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	742

## **Chapter 15 – Mental Health**

Appendix 15A : Kessler Scale: Multiple logistic regression summary for all exposed .	747
Appendix 15B : Kessler Scale: Most parsimonious model obtained by logistic regression for all exposed .....	749
Appendix 15C : Kessler Scale: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre.....	751
Appendix 15D : Kessler Scale: Multiple logistic regression where the exposed group are all those in Program 1 .....	753
Appendix 15E : Kessler Scale: Multiple logistic regression where the exposed group are all those in Program 2 .....	755
Appendix 15F : Kessler Scale: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	757
Appendix 15G : GHQ: Multiple logistic regression summary for all exposed.....	759
Appendix 15H : GHQ: Most parsimonious model obtained by logistic regression for all exposed .....	761

Appendix 15I : GHQ: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre .....	763
Appendix 15J : GHQ: Multiple logistic regression where the exposed group are all those in Program 1.....	765
Appendix 15K : GHQ: Multiple logistic regression where the exposed group are all those in Program 2.....	767
Appendix 15L : GHQ: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	769
Appendix 15M : Self-reported physician diagnosed Depression: Multiple logistic regression summary for all exposed.....	771
Appendix 15N : Self-reported physician diagnosed Depression: Most parsimonious model obtained by logistic regression for all exposed .....	773
Appendix 15O : Self-reported physician diagnosed Depression: Multiple logistic regression where the exposed group are all those in Program 1 .....	774
Appendix 15P : Self-reported physician diagnosed Depression: Multiple logistic regression where the exposed group are all those in Program 2 .....	776
Appendix 15Q : Self-reported physician diagnosed Depression: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	778
Appendix 15R : Self-reported physician diagnosed Anxiety: Multiple logistic regression summary for all exposed .....	780
Appendix 15S : Self-reported physician diagnosed Anxiety: Most parsimonious model obtained by logistic regression for all exposed .....	782
Appendix 15T : Self-reported physician diagnosed Anxiety: Multiple logistic regression where the exposed group are all those in Program 1 .....	783
Appendix 15U : Self-reported physician diagnosed Anxiety: Multiple logistic regression where the exposed group are all those in Program 2.....	785
Appendix 15V : Self-reported physician diagnosed Anxiety: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	787
Appendix 15W : CIDI Depression: Multiple logistic regression summary for all exposed .....	789
Appendix 15X : CIDI Depression: Most parsimonious model obtained by logistic regression for all exposed .....	791

Appendix 15Y : CIDI Depression: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre.....	792
Appendix 15Z : CIDI Depression: Multiple logistic regression where the exposed group are all those in Program 1.....	794
Appendix 15AA : CIDI Depression: Multiple logistic regression where the exposed group are all those in Program 2.....	796
Appendix 15BB : CIDI Depression: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	798
Appendix 15CC : CIDI Anxiety: Multiple logistic regression summary for all exposed.	800
Appendix 15DD : CIDI Anxiety: Most parsimonious model obtained by logistic regression for all exposed.....	802
Appendix 15EE : CIDI Anxiety: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre.....	803
Appendix 15FF : CIDI Anxiety: Logistic regression where the exposed group are all those in Program 1 .....	805
Appendix 15GG : CIDI Anxiety: Multiple logistic regression where the exposed group are all those in Program 2.....	807
Appendix 15HH : CIDI Anxiety: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	809
Appendix 15II Neurasthenia: Multiple logistic regression summary for all exposed ....	811
Appendix 15JJ : Neurasthenia: Most parsimonious model obtained by logistic regression.....	813
Appendix 15KK Neurasthenia: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre.....	814
Appendix 15LL : Neurasthenia: Multiple logistic regression where the exposed group are all those in Program 1.....	816
Appendix 15MM : Neurasthenia: Multiple logistic regression where the exposed group are all those in Program 2.....	818
Appendix 15NN : Neurasthenia: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	820
Appendix 15OO : Self-reported anti-depressant medication: Multiple logistic regression summary for all exposed.....	822

Appendix 15PP : Self-reported anti-depressant medication: Most parsimonious model obtained by logistic regression for all exposed .....	824
Appendix 15QQ : Self-reported anti-depressant medication: Multiple logistic regression where the exposed group are all those in Program 1 .....	825
Appendix 15RR : Self-reported anti-depressant medication: Multiple logistic regression where the exposed group are all those in Program 2 .....	827
Appendix 15SS : Self-reported anti-depressant medication: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	829

## **Chapter 16 – Neuropsychological Outcomes**

Appendix 16A : Similarities: Multiple linear regression summary for all exposed .....	841
Appendix 16B : Similarities: Most parsimonious model obtained by stepwise regression for all exposed .....	843
Appendix 16C : Similarities: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	845
Appendix 16D : Similarities: Multiple linear regression where the exposed group are all those in Program 1 .....	847
Appendix 16E : Similarities: Multiple linear regression where the exposed group are all those in Program 2 .....	849
Appendix 16F : Similarities: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	851
Appendix 16G : COWAT Letter: Multiple linear regression summary for all exposed .	853
Appendix 16H : COWAT Letter: Most parsimonious model obtained by stepwise regression for all exposed .....	856
Appendix 16I : COWAT Letter: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	858
Appendix 16J : COWAT Letter: Multiple linear regression where the exposed group are all those in Program 1 .....	860
Appendix 16K COWAT Letter: Multiple linear regression where the exposed group are all those in Program 2 .....	862
Appendix 16L : COWAT Letter: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed.....	864

Appendix 16M : COWAT Animal: Multiple linear regression summary for all exposed	866
Appendix 16N : COWAT Animal: Most parsimonious model obtained by stepwise regression for all exposed.....	868
Appendix 16O : COWAT Animal: Multiple linear regression with confidence intervals computed using robust standard error estimates after clustering on HSA centre .....	870
Appendix 16P : COWAT Animal: Multiple linear regression where the exposed group are all those in Program 1.....	872
Appendix 16Q : COWAT Animal: Multiple linear regression where the exposed group are all those in Program 2.....	874
Appendix 16R : COWAT Animal: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	876
Appendix 16S : Trail Making Test Part B: Multiple linear regression summary for all exposed .....	878
Appendix 16T : Trail Making Test Part B: Most parsimonious model obtained by stepwise regression for all exposed.....	880
Appendix 16U : Trail Making Test Part B: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	882
Appendix 16V : Trail Making Test Part B: Multiple linear regression where the exposed group are all those in Program 1.....	884
Appendix 16W : Trail Making Test Part B: Multiple linear regression where the exposed group are all those in Program 2.....	886
Appendix 16X : Trail Making Test Part B: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	888
Appendix 16Y : Digit Symbol Coding: Multiple linear regression summary for all exposed .....	890
Appendix 16Z : Digit Symbol Coding: Most parsimonious model obtained by stepwise regression for all exposed.....	893
Appendix 16AA : Digit Symbol Coding: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	895
Appendix 16BB : Digit Symbol Coding: Multiple linear regression where the exposed group are all those in Program 1.....	897

Appendix 16CC : Digit Symbol Coding: Multiple linear regression where the exposed group are all those in Program 2 .....	899
Appendix 16DD : Digit Symbol Coding: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	901
Appendix 16EE : Trail Making Test Part A: Multiple linear regression summary for all exposed.....	903
Appendix 16FF : Trail Making Test Part A: Most parsimonious model obtained by stepwise regression for all exposed .....	905
Appendix 16GG : Trail Making Test Part A: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre.....	906
Appendix 16HH : Trail Making Test Part A: Multiple linear regression where the exposed group are all those in Program 1 .....	908
Appendix 16II : Trail Making Test Part A: Multiple linear regression where the exposed group are all those in Program 2 .....	910
Appendix 16JJ : Trail Making Test Part A: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	912
Appendix 16KK : Purdue Pegboard: Multiple linear regression summary for all exposed .....	914
Appendix 16LL : Purdue Pegboard: Most parsimonious model obtained by stepwise regression for all exposed .....	916
Appendix 16MM : Purdue Pegboard: Multiple linear regression with confidence intervals computed using standard error estimates derived after clustering on HSA centre .....	918
Appendix 16NN : Purdue Pegboard: Multiple linear regression where the exposed group are all those in Program 1 .....	920
Appendix 16OO : Purdue Pegboard: Multiple linear regression where the exposed group are all those in Program 2 .....	922
Appendix 16PP : Purdue Pegboard: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	924
Appendix 16QQ : Digit Span Forwards: Multiple linear regression summary for all exposed.....	926
Appendix 16RR : Digit Span Forwards: Most parsimonious model obtained by stepwise regression for all exposed .....	929

Appendix 16SS : Digit Span Forwards: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	931
Appendix 16TT : Digit Span Forwards: Multiple linear regression where the exposed group are all those in Program 1.....	933
Appendix 16UU : Digit Span Forwards: Multiple linear regression where the exposed group are all those in Program 2.....	935
Appendix 16VV : Digit Span Forwards: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	937
Appendix 16WW : Digit Span Backwards: Multiple linear regression summary for all exposed .....	939
Appendix 16XX : Digit Span Backwards: Most parsimonious model obtained by stepwise regression for all exposed.....	941
Appendix 16YY : Digit Span Backwards: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	943
Appendix 16ZZ : Digit Span Backwards: Multiple linear regression where the exposed group are all those in Program 1.....	945
Appendix 16AAA : Digit Span Backwards: Multiple linear regression where the exposed group are all those in Program 2.....	947
Appendix 16BBB : Digit Span Backwards: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	949
Appendix 16CCC : Incidental Learning Pairing: Multiple logistic regression summary for all exposed .....	951
Appendix 16DDD : Incidental Learning Pairing: Most parsimonious model obtained by logistic regression for all exposed.....	953
Appendix 16EEE : Incidental Learning Pairing: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre.....	954
Appendix 16FFF : Incidental Learning Pairing: Multiple logistic regression where the exposed group are all those in Program 1 .....	956
Appendix 16GGG : Incidental Learning Pairing: Multiple logistic regression where the exposed group are all those in Program 2 .....	958
Appendix 16HHH : Incidental Learning Pairing: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	960

Appendix 16III : Incidental Learning Free Recall: Multiple logistic regression summary for all exposed.....	962
Appendix 16JJJ : Incidental Learning Free Recall: Most parsimonious model obtained by logistic regression for all exposed.....	964
Appendix 16KKK : Incidental Learning Free Recall: Multiple logistic regression with confidence intervals computed using robust standard error estimates after clustering for HSA centre .....	965
Appendix 16LLL : Incidental Learning Free Recall: Multiple logistic regression where the exposed group are all those in Program 1.....	967
Appendix 16MMM : Incidental Learning Free Recall: Multiple logistic regression where the exposed group are all those in Program 2.....	969
Appendix 16NNN : Incidental Learning Free Recall: Multiple logistic regression where the exposed are classified by dose and contrasted to the unexposed .....	971
Appendix 16OOO : Visual Reproduction Immediate Recall: Multiple logistic regression summary for all exposed .....	973
Appendix 16PPP : Visual Reproduction Immediate Recall: Most parsimonious model obtained by logistic regression for all exposed.....	975
Appendix 16QQQ : Visual Reproduction Immediate Recall: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre.....	976
Appendix 16RRR : Visual Reproduction Immediate Recall: Multiple logistic regression where the exposed group are all those in Program 1 .....	978
Appendix 16SSS : Visual Reproduction Immediate Recall: Multiple logistic regression where the exposed group are all those in Program 2.....	980
Appendix 16TTT : Visual Reproduction Immediate Recall: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	982
Appendix 16UUU : Visual Reproduction Delayed Recall: Multiple logistic regression summary for all exposed .....	984
Appendix 16VVV : Visual Reproduction Delayed Recall: Most parsimonious model obtained by logistic regression for all exposed.....	986
Appendix 16WWW : Visual Reproduction Delayed Recall: Multiple logistic regression with confidence intervals computed using robust standard error estimates derived after clustering for HSA centre.....	987
Appendix 16XXX : Visual Reproduction Delayed Recall: Multiple logistic regression where the exposed group are all those in Program 1 .....	989

Appendix 16YYY : Visual Reproduction Delayed Recall: Multiple logistic regression where the exposed group are all those in Program 2 .....	991
Appendix 16ZZZ : Visual Reproduction Delayed Recall: Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	993
Appendix 16AAAA : AVLT Immediate Recall: Multiple linear regression summary for all exposed .....	995
Appendix 16BBBB : AVLT Immediate Recall: Most parsimonious model obtained by stepwise regression for all exposed.....	998
Appendix 16CCCC : AVLT Immediate Recall: multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	1000
Appendix 16DDDD : AVLT Immediate Recall: Multiple linear regression where the exposed group are all those in Program 1 .....	1002
Appendix 16EEEE : AVLT Immediate Recall: Multiple linear regression where the exposed group are all those in Program 2 .....	1004
Appendix 16FFFF : AVLT Immediate Recall: multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	1006
Appendix 16GGGG : AVLT Delayed Recall: Multiple linear regression summary for all exposed .....	1008
Appendix 16HHHH : AVLT Delayed Recall: Most parsimonious model obtained by stepwise regression for all exposed.....	1010
Appendix 16IIII : AVLT Delayed Recall: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre .....	1011
Appendix 16JJJJ : AVLT Delayed Recall: Multiple linear regression where the exposed group are all those in Program 1.....	1013
Appendix 16KKKK : AVLT Delayed Recall: Multiple linear regression where the exposed group are all those in Program 2.....	1015
Appendix 16LLLL : AVLT Delayed Recall: multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	1017
Appendix 16MMMM : AVLT Total Learning: Multiple linear regression summary for all exposed .....	1019
Appendix 16NNNN : AVLT Total Learning: Most parsimonious model obtained by stepwise regression for all exposed.....	1021

Appendix 16OOOO : AVLT Total Learning: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre.....	1023
Appendix 16PPPP : AVLT Total Learning: Multiple linear regression where the exposed group are all those in Program 1 .....	1025
Appendix 16QQQQ : AVLT Total Learning: Multiple linear regression where the exposed group are all those in Program 2.....	1027
Appendix 16RRRR : AVLT Total Learning: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	1029
Appendix 16SSSS : AVLT Forgetting: Multiple linear regression summary for all exposed.....	1031
Appendix 16TTTT : AVLT Forgetting: Most parsimonious model obtained by stepwise regression for all exposed .....	1033
Appendix 16UUUU : AVLT Forgetting: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre.....	1034
Appendix 16VVVV : AVLT forgetting: Multiple linear regression where the exposed group are all those in Program 1 .....	1036
Appendix 16WWWW : AVLT Forgetting: Multiple linear regression where the exposed group are all those in Program 2 .....	1038
Appendix 16XXXX : AVLT Forgetting: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	1040
Appendix 16YYYY : AVLT Retrieval Efficiency: Multiple linear regression summary for all exposed .....	1042
Appendix 16ZZZZ : AVLT Retrieval Efficiency: Most parsimonious model obtained by stepwise regression for all exposed .....	1044
Appendix 16AAAAA : AVLT Retrieval Efficiency: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre.....	1045
Appendix 16BBBBB : AVLT Retrieval Efficiency: Multiple linear regression where the exposed group are those in Program 1 .....	1047
Appendix 16CCCCC : AVLT Retrieval Efficiency: Multiple linear regression where the exposed group are all those in Program 2.....	1049
Appendix 16DDDDD : AVLT Retrieval Efficiency: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	1051

Appendix 16EEEEEE Block Design: Multiple linear regression summary for all exposed .....	1053
Appendix 16FFFFFF : Block Design: Most parsimonious model obtained by stepwise regression for all exposed.....	1056
Appendix 16GGGGG : Block Design: Multiple linear regression with confidence intervals computed using robust standard error estimates derived after clustering on HSA centre.....	1058
Appendix 16HHHHH : Block Design: Multiple linear regression where the exposed group are all those in Program 1.....	1060
Appendix 16IIIII : Block Design: Multiple linear regression where the exposed group are all those in Program 2.....	1062
Appendix 16JJJJJ : Block Design: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	1064
Appendix 16KKKKK : Memory Complaint Questionnaire: Multiple linear regression summary for all exposed.....	1066
Appendix 16LLLLL : Memory Complaint Questionnaire: Most parsimonious model obtained by stepwise regression for all exposed .....	1068
Appendix 16MMMMM : Memory Complaint Questionnaire: Multiple linear regression where the exposed group are all those in Program 1 .....	1070
Appendix 16NNNNN : Memory Complaint Questionnaire: Multiple linear regression where the exposed group are all those in Program 2 .....	1072
Appendix 16OOOOO : Memory Complaint Questionnaire: Multiple linear regression where exposed are classified by dose and contrasted to the unexposed .....	1074
Appendix 16PPPPP : PQ item "forgetfulness": Multiple logistic regression summary for all exposed .....	1076
Appendix 16QQQQQ : PQ item "forgetfulness": Most parsimonious model obtained by logistic regression for all exposed.....	1078
Appendix 16RRRRR : PQ item "forgetfulness": Multiple logistic regression where the exposed group are all those in Program 1 .....	1079
Appendix 16SSSSS : PQ item "forgetfulness": Multiple logistic regression where the exposed group are all those in Program 2 .....	1081
Appendix 16TTTTT : PQ item "forgetfulness": Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	1083
Appendix 16UUUUU : PQ item "loss of concentration": Multiple logistic regression summary for all exposed.....	1085

Appendix 16VVVVV : PQ item "loss of concentration": Most parsimonious model obtained by logistic regression for all exposed .....	1087
Appendix 16WWWWW : PQ item "loss of concentration": Multiple logistic regression where the exposed group are all those in Program 1 .....	1088
Appendix 16XXXXX : PQ item "loss of concentration": Multiple logistic regression where the exposed group are all those in Program 2.....	1090
Appendix 16YYYYY : PQ item "loss of concentration": Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed .....	1092
Appendix 16ZZZZZ : PQ item "difficulty finding the right word": Multiple logistic regression summary for all exposed.....	1094
Appendix 16AAAAA : PQ item "difficulty finding the right word": Most parsimonious model obtained by logistic regression for all exposed .....	1096
Appendix 16BBBBB : PQ item "difficulty finding the right word": Multiple regression where the exposed group are all those in Program 1 .....	1097
Appendix 16CCCCC : PQ item "difficulty finding the right word": Multiple logistic regression where the exposed group are all those in Program 2 .....	1099
Appendix 16DDDDD : PQ item "difficulty finding the right word": Multiple logistic regression where exposed are classified by dose and contrasted to the unexposed.....	1101

## **Chapter 17 – Review of Findings and Discussion**

Appendix 17A : Correlations between dichotomous and continuous measures.....	1104
Appendix 17B : Dose-response curve, relating the number of positive outcomes to continuous scores for sub-domains of neuropsychological function (Executive Function, Psychomotor Speed, New Learning/Memory and Visuospatial ability) .....	1105
