Defence Enterprise

- In a more complex and contested environment, the Defence enterprise must be resilient to shocks and outside interference to deliver the Government’s Defence strategy.
- The 2020 Force Structure Plan enhances Defence’s resilience through a range of investments and sustainment funding in the Defence enterprise to increase its self-reliant ability to deploy and deliver combat power.

KEY INVESTMENT – APPROXIMATELY $15 BILLION

- **Geospatial information and intelligence**
  Improving Defence’s sovereign capacity to maintain awareness of a rapidly-changing strategic environment, including acquisition of a space-based imagery capability to enhance coverage of the Indo-Pacific region.

- **Guided weapons and explosive ordnance**
  Ensuring Defence’s capacity to sustain the ADF on operations, including by increasing ADF weapons inventory, expanding munitions production and exploring the potential for a new sovereign guided weapons and explosive ordnance production capability.

- **Defence training and simulation**
  Increasing ADF preparedness for the range of missions it will face now and in the future. This includes enhancing Defence training areas and facilities, live and simulated.

- **Defence business enterprise architecture and transformation**
  Driving improved business processes, enterprise information management, enterprise resource management and broader transformational reforms. This includes upgrades and improvements to health, Defence’s information management systems and technology, and resource planning.

- **Joint logistics**
  Developing more durable supply chains and strengthening sovereign industrial capabilities to increase the ADF’s self-reliance, including investment in improved fuel resilience, additional fuel storage and digitalisation and modularisation of existing supply systems.
