

Lombrum Infrastructure Project

The Lombrum Infrastructure Project will support the redevelopment of Lombrum Naval Base. It will build PNG sovereign capability to protect its borders and maritime resources.

Construction will include community, work, training and accommodation facilities; and critical infrastructure such as water, sewerage and electrical services. Operational facilities will be constructed to support the Guardian-class Patrol Boats and small boat operations.

The local industry involvement will support Manus community technical and vocational training through on the job experience.

The Lombrum Infrastructure Project will deliver local economic benefits. There will be opportunity for Manus residents to diversify from agriculture and fishing to other sectors, including construction, security, grounds and facility upkeep and catering.

The Manus economy will see benefits to the local construction industry, wholesale and retail, agriculture, forestry and fishing industries.
