Our Performance

Reporting

In keeping with Australia's national interests and international obligations, Defence facilitates the responsible export of military and dual-use goods and technologies from Australia.

Defence Export Controls' quarterly permit statistics provide the number and types of export applications received and finalised, application processing timeframes, the estimated total value of permits issued, and the breakdown of permits issued to end-users by continent.

The statistics do not equate to actual exports as there is no obligation to conduct or report on an activity under permit.

What are military and dual-use goods and technologies?

Permits are required for the export of military and dual-use goods and technologies which are defined by the Defence and Strategic Goods List.

Military goods include weapons, munitions and armour but also include items such as explosives, radios, simulators and training equipment that are used in civilian industries such as mining and manufacturing.

Export permits are necessary for exports to support UN and other peacekeeping missions and for individual Australian sporting shooters to attend overseas events.

Dual-use items and technologies are generally used for civilian purposes but could also be used or adapted for use in a military program or contribute to the development and production of chemical, biological or nuclear weapons systems. Dual-use items can include chemicals for mineral processing, sensors and lasers for university research and development programs, or software and computer equipment.

All applications are assessed on case-by-case basis in accordance with our legislation based export control provisions. This includes consideration of human rights, national security, regional security, foreign policy and international obligations.

Details on arms transfers within scope of the Arms Trade Treaty are available on the Department of Foreign Affairs and Trade (DFAT) website.

Estimated Value of Approved Defence Permits

Caveats on statistics in this section: From 1 January 2018 onwards, applicants have been required to include their estimation of the total value of their export over the life of the permit. Some permits extend over multiple years. Year-to-year comparisons of export values could therefore be misleading.
