# 1. Introduction

## 1.1 Background

JBS&G Australia Pty Ltd (JBS&G) has been engaged by the Department of Defence (Defence) to act as the Lead Consultant for the implementation of Defence (2020) RAAF Base Amberley, Per and Polyfluoroalkyl Substances (PFAS) Management Area Plan (the PMAP). The location of the Base and Management Area have been illustrated on **Figure 1**. The Base has been further divided into 11 surface water catchment areas, with discharge points for the on Base drainage system to Bremer River and Warrill Creek illustrated on **Figure 2**.

The PMAP includes an Ongoing Monitoring Plan (OMP), which sets out the requirements for collection of adequate data to assess changes in the nature and extent of contamination across the Management Area. The information collected may be used to inform where new risk management actions may be required, or to support a determination that remediation has been completed so far as reasonably practicable. An Ongoing Monitoring Report (OMR) is prepared following each 12-month monitoring period and presents an interpretation of data collected as part of the OMP.

This Sampling Event Report (SER) has been prepared in accordance with the Defence (2024) *Ongoing Monitoring Program Reporting Guidance*.

## 1.2 Objective

The objective of this SER is to document the observations, information and data collected in accordance with the OMP during the October / November 2024 monitoring event.

## 1.3 Scope

The October / November 2024 sampling event was completed in general accordance with the Sampling and Analysis Quality Plan (AECOM, 2024a)[1] (the SAQP). The scope of work comprised:

- Liaison with Base management and landowners to obtain access to the OMP sampling locations.
- Completion of the groundwater sampling program inclusive of:
  - Gauging of 44 of 45 monitoring wells prior to collection of samples. One well (MW309) was not gauged due to damaged well covering.
  - Sampling of 44 of 45 monitoring wells. One well (MW309) not monitored due to damaged well covering.
- Completion of the surface water sampling program:
  - Sampling of 44 of 49 surface water points. Four monitoring locations were dry at the time of sampling (SW003, SW030, SW064, SW067), and one sample location (SW033) was inaccessible due to Base operations.
- Completion of the sediment sampling program:
  - Sampling of 47 of 49 sediment collection points. Two sample locations were inaccessible due to Base operations (SD033), and flood conditions preventing safe collection (SD040).

[1] AECOM (2024a). *PFAS OMP-RAAF Base Amberley Sampling and Analysis Quality Plan*. January 2024

- Collection of quality control samples at a rate of 1 in 10 primary samples for both intra- and inter-laboratory, as well as one field blank per day and one rinsate per day (where non-disposable sampling equipment was used), and one trip blank per media, per laboratory batch.
- Analysis of samples for the PFAS suite at standard LOR (limit of reporting).
- Data management of all OMP data in the Defence Esdat database.
- Preparation of result letters for off-Base stakeholders.
- Preparation of this SER.

# 2. Summary of Sampling and Analysis

## 2.1 Sampling and Analysis Quality Plan

The October / November 2024 sampling event was completed in general accordance with the SAQP, with deviation from the SAQP presented in **Section 2.2**. The SAQP presents the data quality objectives, data quality indicators and sample methodologies.

The OMP sample locations for groundwater and co-located surface water/sediment locations have been shown on **Figure 3** and **Figure 4**, respectively.

## 2.2 Deviations From SAQP

Deviations from the SAQP have been presented in the table below. The deviations are not considered to significantly impact the objectives of the OMP program.

**Table 2-1: Deviations from SAQP**

| Location(s) | Deviation | Comment | Impact to OMP |
|---|---|---|---|
| MW535, MW536, MW537, MW538, MW539 | Additional monitoring locations | Newly installed replacement wells monitored. | Not significant – The monitoring of newly installed replacement groundwater wells does not impact the existing monitoring well network, rather increases the spatial coverage. |
| MW309 | Not sampled | Well damaged. | Moderate – This deviation reduces the spatial coverage of the groundwater monitoring well network within the central portion of the Base. Groundwater monitoring wells are located downgradient of the target source area. |
| MW025, MW028 MW032, MW055S MW055D, MW056S MW056I | Retrieval of data logger not completed | Data loggers were removed from the monitoring wells prior to the October / November 2024 sampling event. | Not significant – the changes in groundwater elevations at these monitoring wells are well understood through data collected since 2019. |
| SW003, SW030, SW064 and SW067 | Not sampled | Sample locations were recorded as being dry at the time of monitoring. | Not significant – upstream and downstream locations were sampled during this monitoring event. |

| | | | |
|---|---|---|---|
| SW/SD033 | Not sampled | Sample locations were inaccessible due to Base operations. | Not significant –downstream locations were sampled during this monitoring event. |
| SD040 | Not sampled | Sample locations were inaccessible due to unsafe access conditions. | Not significant – sufficient sediment data has been collected at the monitoring locations. |

## 2.3 Groundwater Sampling Program

### 2.3.1 Groundwater Monitoring Locations

The following table presents the OMP groundwater monitoring network across the Management Area, including a description of proximity to potential PFAS sources referred to as Confirmed Primary Source Areas (CPSAs) detailed in the PMAP.

**Table 2-2: OMP Groundwater Monitoring Network**

| Approximate Target Source Area | Monitoring Well ID | Screened Aquifer |
|---|---|---|
| Major - CPSA A<br>Former Topside Aviation FTA and current FTA Fire Pad | MW002 | Walloon Coal Measures |
| | MW033 | Walloon Coal Measures |
| | MW535 | Alluvium |
| | MW536 | Alluvium |
| | MW539 | Alluvium |
| Major - CPSA B<br>Hangar 410 and Former Landfill | MW047 | Tertiary Formation |
| Major - CPSA C<br>Frogs Hollow Former Fire Training School Location | MW037 | Alluvium |
| Major - CPSA D<br>Sewage Treatment Plant | MW021 | Alluvium |
| | MW032 | Alluvium |
| Moderate - CPSA E<br>Historical Containment Pond | MW048 | Alluvium |
| Major - CPSA G<br>Former FTA and Operational Testing Area | MW050 | Alluvium |
| Major - CPSA J<br>Former FTA and Operational Testing Area | MW005 | Alluvium |
| Major - CPSA M<br>Former Fuel Farm 1 and Triple Interceptor Pit and Major - CPSA N<br>Fire Station | MW006 | Alluvium |
| | MW023 | Alluvium |
| | MW028 | Alluvium |
| | MW029 | Alluvium |
| | MW036 | Alluvium |
| | MW309* | Tertiary Formation |
| Insignificant - CPSA P<br>Potential location of 1978 Skyhawk incident | MW538 | Alluvium |
| Minor - CPSA V<br>AFFF Wastewater Holding Tank | MW046 | Tertiary Formation |
| Major - CPSA W | MW026 | Tertiary Formation |

| Approximate Target Source Area | Monitoring Well ID | Screened Aquifer |
|---|---|---|
| Fire Fighting Training School | MW030 | Walloon Coal Measures |
| | MW031 | Tertiary Formation |
| | MW042 | Walloon Coal Measures |
| | MW043 | Walloon Coal Measures |
| Major - CPSA X<br>Former Structural and Open Pit FTA | MW041 | Walloon Coal Measures |
| Major - CPSA Y<br>Former Secondary FTA | MW537 | Tertiary Formation |
| Minor - CPSA Z<br>Fuel underground storage tank (UST) with AFFF listing | MW020 | Tertiary Formation |
| Moderate - CPSA AA<br>Triple Interceptor Pits at Engine Test Cell Facilities 1 and 2 | MW007 | Alluvium |
| Minor - CPSA BB<br>Areas used for irrigation- former grassed runways | MW012 | Tertiary Formation |
| Moderate – CPSA CC<br>Former Landfill | MW022 | Alluvium |
| Major - CPSA DD<br>HS748 Former FTA on Disused Runway | MW049 | Alluvium |
| Off-Base Warrill Creek.<br>These locations are down-gradient of multiple source areas. | MW054S | Alluvium |
| | MW054D | Walloon Coal Measures |
| | MW057S | Alluvium |
| | MW057I | Tertiary Formation |
| On-Base Bremer River.<br>These locations are down-gradient of multiple source areas. | MW024 | Alluvium |
| | MW025 | Alluvium |
| | MW034 | Alluvium |
| | MW035 | Alluvium |
| | MW044 | Alluvium |
| | MW055S | Alluvium |
| | MW055D | Walloon Coal Measures |
| Off-Base Bremer River.<br>These locations are down-gradient of multiple source areas | MW056S | Alluvium |
| | MW056I | Tertiary Formation |

**Notes:** * Indicates location was not assessed or sampled.
Suffix 'S', 'D' or 'I' represents the following S= Shallow I= Intermediate and D= Deep

### 2.3.2 Groundwater Sampling Methodology

The groundwater sampling methodology is presented in **Table 2-3** below.

**Table 2-3: Groundwater Sampling Methodology**

| Aspect | Detail |
|---|---|
| Monitoring Period | Groundwater monitoring was completed between 21 October 2024 and 26 November 2024. |
| Groundwater Gauging | Standing water levels (SWLs) were measured in each monitoring well using an interface probe (IP) prior to the installation of HydraSleeves™. Gauging was conducted in as short a time as possible; however, due to the number of wells and different requirements for accessing the monitoring well locations, the gauging took place over varying periods of time based on access, with the majority undertaken between the 21 and 23 October (32 wells) and the remainder between the 4 and 7 November (12 wells). |
| HydraSleeve™ Deployment | The HydraSleeves™ were installed within the screened interval of each well (based on a review of the well construction log) for a minimum of 24 hours prior to the sampling round. Once sampling was completed, new HydraSleeves™ were deployed at the screened interval depth in 21 of the monitoring wells in preparation for the next sampling round. HydraSleeves™ were not installed in 24 monitoring wells as they are regularly monitored by other programs. |
| Sample Retrieval | Groundwater samples were collected from the monitoring wells via a continuous pull method, enabling water to pass through the HydraSleeves™ check valve. Samples were collected immediately via the dedicated discharge tube (to minimise changes to chemistry).<br>During sampling, features such as discolouration, staining, odours and other indications of contamination were noted. |
| Field Parameters | Groundwater field parameters were obtained ex-situ, using water remaining in the HydraSleeves™ following sampling. Field measurements recorded comprised the following:<br>• Temperature.<br>• Electrical conductivity (EC).<br>• Dissolved oxygen (DO).<br>• Oxidation-reduction potential (ORP).<br>• pH. |
| Decontamination | Dedicated HydraSleeves™ were used at each groundwater monitoring well location. All reusable monitoring equipment (i.e. IP) was cleaned using PFAS-free detergent and PFAS-free deionised water supplied by the analytical laboratory. |
| Sample Identification, Preservation and Transportation | Each sample was labelled with project identification number, date, samplers initial and sample location. Labelling was completed in accordance with Annex L of the DCMM (Defence 2021).<br>Samples were collected into laboratory supplied sample containers (Teflon-free) and immediately transferred to a chilled ice chest for transport to the testing laboratory under chain of custody documentation. |
| QA/QC | Groundwater quality control samples were collected as follows, and analysed for the full PFAS analytical suite:<br>• Field duplicate (intra-laboratory) samples at 1 per 10 primary samples.<br>• Field triplicate (inter-laboratory) samples at 1 per 10 primary samples.<br>• Rinsate blank samples as one per day, collected from reusable equipment (interface probe and trowel).<br>• Field blank samples collected at a rate of one per day (groundwater and surface water). |

| Aspect | Detail |
|---|---|
| | • Trip blank samples submitted at a rate of one per laboratory batch (groundwater and surface water).<br>All field instruments (e.g. interface probes, water quality meters) were calibrated by the equipment supplier. Calibration checks were completed daily by field personnel prior to use during the monitoring event. Calibration certificates and bump test results are provided in **Appendix E**. |

### 2.3.3 Groundwater Analysis

Groundwater samples were submitted to the following National Association of Testing Authorities (NATA) accredited laboratories for analysis in accordance with the analytical schedule included in **Table 2-4**:

- Eurofins Brisbane (NATA Accreditation Number 1261).
- Envirolab (NATA Accreditation Number 290).

**Table 2-4: Groundwater Analytical Schedule**

| No. Primary Samples | Parameter | Method | LOR* |
|---|---|---|---|
| 44 | Extended PFAS Suite | LC/MS-MS | 0.01 – 0.1 µg/L |

**Note:** LC/MS-MS: Liquid chromatography–mass spectrometry
* LOR for Eurofins Brisbane

## 2.4 Surface Water Sampling Program

### 2.4.1 Surface Water Monitoring Locations

The following table presents the OMP surface water monitoring locations across the Management Area, including a description of location from which the body of water was sampled.

**Table 2-5: OMP Surface Water Monitoring Locations**

| Location | Surface Water Points |
|---|---|
| On-Base Drains | SW002, SW003*, SW008, SW011, SW021, SW027, SW028, SW030*, SW033*, SW037, SW038, SW041, SW048, SW049, SW053, SW056, SW059, SW064*, SW067*, SW076, SW079, SW080 |
| Warrill Creek | SW004, SW005, SW009, SW015, SW016, SW018, SW020, SW026, SW034, SW043, SW099, SW100 |
| Bremer River | SW025, SW036, SW039, SW040, SW045, SW047, SW050, SW051, SW052, SW088, SW089, SW090, SW091, SW094, SW098 |

**Note:** * Indicates location was not assessed or sampled.

### 2.4.2 Surface Water Sampling Methodology

The surface water sampling methodology is presented in **Table 2-6** below.

**Table 2-6: Surface Water Sampling Methodology**

| Aspect | Detail |
|---|---|
| Monitoring Period | Surface water monitoring was completed between 28 October 2024 and 18 November 2024. |
| Sampling Methodology | Surface water samples were collected directly into the laboratory supplied sample container. At each sample location a new sample container was lowered into the water at least 10cm below the surface (where possible), with the opening facing down to avoid |

| Aspect | Detail |
|---|---|
| | collection of surface films. The cap was applied immediately once the sample container was full.<br><br>Where surface water was difficult to access, the sample container was attached to the telescopic pole, which was lowered into the water body. The telescopic pole was attached so that the telescopic pole was not in direct contact with the opening of the sample container. Sample location SW040 was sampled using a dedicated bailer, with the sample decanted directly into to the laboratory provided sample container.<br><br>During sampling, features such as discolouration, staining, odours and other indications of contamination were noted.<br><br>Once collected, samples were immediately transferred to a chilled ice chest for transport to the testing laboratory under chain of custody documentation. |
| Field Parameters | Surface water field parameters were obtained in-situ at the time of sampling. Field measurements recorded comprised: Temperature, EC, DO, ORP and pH. |
| Decontamination | All reusable monitoring equipment (i.e. telescopic pole) was cleaned using PFAS-free detergent and PFAS-free deionised water supplied by the analytical laboratory. |
| Sample Identification, Preservation and Transportation | Each sample was labelled with project identification number, date, samplers initial and sample location. Labelling was completed in accordance with Annex L of the DCMM (Defence 2021).<br><br>Samples were collected into laboratory supplied sample containers (Teflon-free) and immediately transferred to a chilled ice chest for transport to the testing laboratory under chain of custody documentation. |
| QA/QC | Surface water quality control samples were collected as follows, and analysed for the full PFAS analytical suite:<br>• Field duplicate (intra-laboratory) samples at 1 per 10 primary samples.<br>• Field triplicate (inter-laboratory) samples at 1 per 10 primary samples.<br>• Rinsate blank samples as one per day, collected from reusable equipment (interface probe and trowel).<br>• Field blank samples collected at a rate of one per day (groundwater and surface water).<br>• Trip blank samples submitted at a rate of one per laboratory batch (groundwater and surface water).<br>All field instruments (e.g. interface probes, water quality meters) were calibrated by the equipment supplier. Calibration checks were completed daily by field personnel prior to use during the monitoring event. Calibration certificates and bump test results are provided in **Appendix E**. |

### 2.4.3 Surface Water Analysis

Surface water samples were submitted to the following National Association of Testing Authorities (NATA) accredited laboratories for analysis in accordance with the analytical schedule included in **Table 2-7**:

- Eurofins Brisbane (NATA Accreditation Number 1261).
- Envirolab (NATA Accreditation Number 290).

**Table 2-7: Surface Water Analytical Schedule**

| No. Primary Samples | Parameter | Method | LOR* |
|---|---|---|---|
| 44 | Extended PFAS Suite | LC/MS-MS | 0.01 – 0.1 µg/L |

**Note:** LC/MS-MS: Liquid chromatography–mass spectrometry
* LOR for Eurofins Brisbane

## 2.5 Sediment Sampling Program

### 2.5.1 Sediment Monitoring Locations

The following table presents the OMP sediment monitoring locations across the Management Area, including a description of location from which body of water the sediment sample was collected.

**Table 2-8: OMP Sediment Monitoring Locations**

| Location | Sediment Points |
|---|---|
| On-Base Drains | SD002, SD003, SD008, SD011, SD021, SD027, SD028, SD030, SD033*, SD037, SD038, SD041, SD048, SD049, SD053, SD056, SD059, SD064, SD067, SD076, SD079, SD080 |
| Warrill Creek | SD004, SD005, SD009, SD015, SD016, SD018, SD020, SD026, SD034, SD043, SD099, SD100 |
| Bremer River | SD025, SD036, SD039, SD040*, SD045, SD047, SD050, SD051, SD052, SD088, SD089, SD090, SD091, SD094, SD098 |

**Note:** * Indicates location was not assessed or sampled.

### 2.5.2 Sediment Sampling Methodology

The sediment sampling methodology is presented in **Table 2-9** below.

**Table 2-9: Sediment Sampling Methodology**

| Aspect | Detail |
|---|---|
| Monitoring Period | Sediment monitoring was completed between 28 October 2024 and 18 November 2024. |
| Sampling Methodology | Samples representative of deposited sediments was collected from within the water body where possible. Sediment samples were collected either by hand using new nitrile gloves, or from a trowel. A new laboratory-supplied container was filled at each location.<br>During sampling, features such as discolouration, staining, odours and other indications of contamination were noted. |
| Logging | Sediment characterisation details were recorded for each sample. |
| Decontamination | All reusable monitoring equipment (i.e. trowel) was cleaned using PFAS-free detergent and PFAS-free deionised water supplied by the analytical laboratory. |
| Sample Identification, Preservation and Transportation | Each sample was labelled with project identification number, date, samplers initial and sample location. Labelling was completed in accordance with Annex L of the DCMM (Defence 2021).<br>Samples were collected into laboratory supplied sample containers (Teflon-free) and immediately transferred to a chilled ice chest for transport to the testing laboratory under chain of custody documentation. |
| QA/QC | Sediment quality control samples were collected as follows, and analysed for the full PFAS analytical suite: |

| | |
|---|---|
| | • Field duplicate (intra-laboratory) samples at 1 per 10 primary samples.<br>• Field triplicate (inter-laboratory) samples at 1 per 10 primary samples.<br>• Rinsate blank samples as one per day, collected from reusable equipment (interface probe and trowel).<br>• Field blank samples collected at a rate of one per day (groundwater and surface water).<br>• Trip blank samples submitted at a rate of one per laboratory batch (sediment). |

### 2.5.3 Sediment Analysis

Sediment samples were submitted to the following National Association of Testing Authorities (NATA) accredited laboratories for analysis in accordance with the analytical schedule included in **Table 2-10**.

- Eurofins Brisbane (NATA Accreditation Number 1261).
- Envirolab (NATA Accreditation Number 290).

Due to an error in assigned laboratory LOR, primary sediment samples were subject to re-analysis at the prescribed LOR required for comparison with historical data. The primary results of the re-analysis at the prescribed LOR have been reported and documented within this SER.

**Table 2-10: Sediment Analytical Schedule**

| No. Primary Samples | Parameter | Method | LOR* |
|---|---|---|---|
| 47 | Extended PFAS Suite | LC/MS-MS | 0.0002 – 0.001 mg/kg |

**Note:** LC/MS-MS: Liquid chromatography–mass spectrometry
* LOR for Eurofins Brisbane

# 3. PFAS Screening Criteria

## 3.1 Groundwater and Surface Water

Screening criteria adopted for groundwater and surface water are detailed within the SAQP and summarised in **Table 3-1** below. The assessment criteria were adopted in consideration of the following guidance:

- National Environment Protection (Assessment of Site Contamination) Measure 1999, Schedule B1, as amended in 2013 (ASC NEPM); and
- Heads of Environmental Protection Agencies (HEPA). (2020). PFAS National Environmental Management Plan, Version 2.0. January 2020 (PFAS NEMP).

The adopted assessment criteria are in accordance with the PFAS screening criteria nominated in the PMAP.

**Table 3-1: Groundwater and Surface Water Assessment Criteria**

| Environmental Media | Exposure Scenario | Adopted Assessment Criteria (µg/L) | | | Guidance |
|---|---|---|---|---|---|
| | | PFHxS + PFOS | PFOS | PFOA | |
| **Human Health Receptors** | | | | | |
| Groundwater and Surface Water | Drinking Water[1] | 0.07 | | 0.56 | HEPA (2020) |
| Surface Water | Recreational Use | 2 | | 10 | HEPA (2020)[2] |
| **Ecological Receptors** | | | | | |
| Groundwater and Surface Water | Freshwater (95 % species protection) | | 0.13 | 220 | HEPA (2020) |

| | | | | |
|---|---|---|---|---|
| Groundwater and Surface Water | Freshwater (99% species protection) | 0.00023 | 19 | HEPA (2020) |

Notes:

1. Drinking water screening guidelines have been adopted for screened purposes for Industrial Water use, Stock Water use and Agriculture/Parks/Gardens water use.
2. Criteria sourced from National Health and Medical Research Council, 2019. Guidance on PFAS in Recreational Water, August 2019 (NHMRC, 2019).

### 3.2 Sediment

At the time of this SER, there are currently no Commonwealth endorsed criteria for screening of risk posed to human health or the environment by PFAS in sediment.

# 4. Quality Assurance and Quality Control

## 4.1 Data Reliability Process

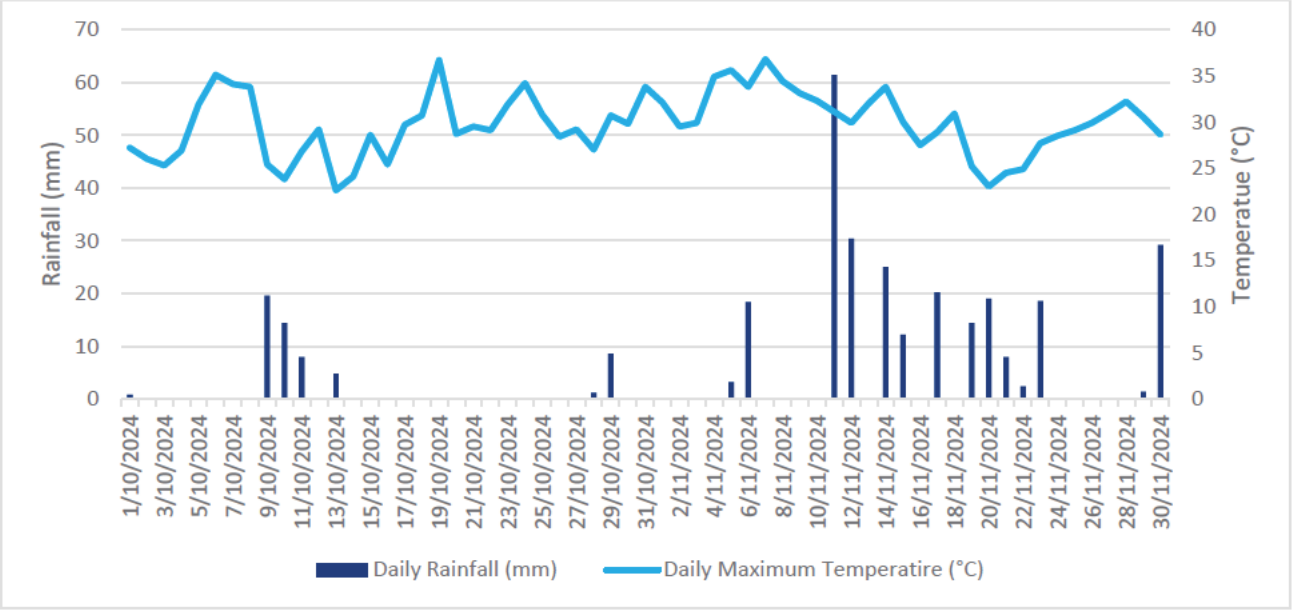
An assessment of data reliability is critical to inform the use and interpretation of the data collected as part of the OMP. Data Quality Indicators (DQIs) are presented within the SAQP and include assessment of the following:

- Documentation and data completeness; and
- Data Quality – comparability, representativeness, precision, and accuracy of the analytical data.

The project target for data reliability is 95% compliance with the DQIs.

## 4.2 Data Reliability Summary

A data validation assessment is provided in **Appendix D** and has concluded that there are no significant errors associated with the data collected and laboratory analysis of the samples, with the exception of anomalous field parameter records. On this basis, the analytical results reported are representative of Base conditions and the data set is adequately reliable for the objective of this SER. The anomalous field parameters recorded should be confirmed during future monitoring events.



All data collected during this event has been reviewed and uploaded to the Defence ESdat database in accordance with Annex L of the DCMM (Defence, 2021).

# 5. Field Observations and Results

## 5.1 Weather Conditions

Rainfall measurements were obtained from the Bureau of Meteorology (BoM), Amberley Atlantic Multidecadal Oscillation (AMO) weather station (Station Number 040004). During the October/November 2024 sampling event (21 October to 26 November) a total of 243.2 mm of rain was recorded. The monthly rainfall for October 2024 (57.8 mm) was below the historical mean of 73.2 mm (1941 to 2024), whereas the monthly rainfall for November 2024 (264.2 mm) was well above the historical mean of 83.2 mm. Flood conditions were encountered within the Bremer River and Warrill Creek from the 11 to 23 November 2024.

A summary of weather conditions encountered has been illustrated in **Graph 1**.

**Graph 1: October / November 2024 Monitoring Period Weather Conditions (BoM, Amberley AMO Station 040004)**

## 5.2 Groundwater

### 5.2.1 Groundwater Monitoring Access

The groundwater monitoring well network was accessible during the sampling event and no issues with groundwater monitoring well integrity were identified except for the following:

- Five groundwater monitoring well monuments were identified as damaged, with four reported to be de-stabilised (i.e. rocking) (MW006, MW023, MW035 and MW037), whilst one monument was recorded as being on an angle (MW034). Monitoring wells were able to be successfully sampled.
- One monitoring well (MW309) was unable to be accessed and sampled due to a damaged gatic cover (i.e. stripped bolt).

### 5.2.2 Groundwater Elevation and Flow Direction

Standing Water Levels (SWLs) are measured in terms of metres below top of casing (mBTOC) and then converted into a relative level (RL) to determine the inferred groundwater flow direction. Groundwater elevations in the Alluvium/Tertiary Formation ranged between 8.558 and 29.099 metres Australian height datum (mAHD). The groundwater flow direction was inferred to be from the topographical high in the western portion of the Base (where the Tertiary Formation is the upper aquifer material) to the lower areas in the northeast, east and southeast (where the Alluvium forms the upper portion of the aquifer).

Groundwater elevation in the Walloon Coal Measures ranged between 14.330 and 37.992 mAHD. The Walloon Coal Measures represent a highly complex system characterised by high (fractures and bedding planes) and low (rock mass) hydraulic conductivity zones. The system is recharged by leakage from upper formations with the potential for direct recharge via rock outcropping. The complexity of the system is reflected in the significant variability of groundwater elevations recorded within the limited number of monitoring wells screened within the Walloon Coal Measures. On this basis, the preparation of groundwater contours is not considered to be justified.

The groundwater gauging data recorded has been presented in **Table B-1**, in **Appendix B**. Groundwater contours for the Alluvium / Tertiary Formation and groundwater elevations for the Walloon Coal Measures have been provided as **Figure 5** and **Figure 6**.

### 5.2.3 Groundwater Field Parameters and Observations

Groundwater field parameters are presented in **Table B-2**, in **Appendix B**. The field parameters were recorded ex-situ with remaining groundwater from the HydraSleeve™ following sampling. A summary of the field parameters has been presented in **Table 5-1**.

The following presented a summary of observations recorded during sampling:

- A metallic odour was recorded from 10 groundwater monitoring well locations (MW012, MW005, MW020, MW037, MW047, MW050, MW054D, MW054S, MW055S, MW024).
- A slight hydrocarbon odour was noted in one well (MW037).
- A sulfuric odour was recorded from three groundwater monitoring well locations (MW028, MW050, MW055D).
- A sour odour was recorded from four groundwater monitoring well locations (MW042, MW043, MW057I, MW057S).
- A solvent odour was recorded from one groundwater monitoring well location (MW033).
- An organic odour was recorded from one groundwater monitoring well location (MW044).
- No other visible or olfactory indications of contamination were observed during the sampling of the other monitoring wells.

Several pH and DO readings across the monitoring network differed greatly by comparison to previous monitoring events. These readings are considered to be anomalous and should be confirmed during future monitoring events.

**Table 5-1: Groundwater Field Parameters Summary**

| Unit | Parameter | Minimum | Maximum | Comment |
|---|---|---|---|---|
| Alluvium | DO (mg/L) | 0.23 | 8.60 | Anaerobic to aerobic conditions |
| | EC (µs/cm) | 114 | 15780 | Fresh to saline |
| | Eh (MV) | 173.8 | 425.2 | Mildly to moderately reducing |
| | Temperature (°C) | 21.3 | 25.6 | - |
| | pH | 3.27 | 9.75 | Acidic to alkaline |
| Tertiary Formation | DO (mg/L) | 0.02 | 8.76 | Anaerobic to aerobic conditions |
| | EC (µs/cm) | 385 | 27740 | Fresh to saline |
| | Eh (MV) | 149.0 | 305.9 | Mildly to moderately reducing |
| | Temperature (°C) | 21.6 | 25.5 | - |
| | pH | 3.51 | 10.06 | Acidic to alkaline |
| Walloon Coal Measures | DO (mg/L) | 0.02 | 5.42 | Anaerobic to aerobic conditions |
| | EC (µs/cm) | 500 | 21876 | Fresh to saline |
| | Eh (MV) | 112.0 | 332.7 | Mildly to moderately reducing |

| Unit | Parameter | Minimum | Maximum | Comment |
|---|---|---|---|---|
| | Temperature (°C) | 23.0 | 25.2 | - |
| | pH | 3.77 | 7.07 | Acidic to alkaline |

### 5.2.4 Groundwater Analytical Results

The groundwater analytical results have been compared against the adopted screening criteria and are presented in **Table C-1, Appendix C**. Concentrations of Sum PFHxS+PFOS and PFOA have been shown on **Figure 7** to **Figure 10**. Based on review of analytical results:

- Concentrations of PFOS in 22 out of 44 samples exceeded freshwater (95 % species protection) criteria, with 32 out of 44 samples exceeding the freshwater (99 % species protection) criteria.
- Concentrations of PFOS+PFHxS in 27 out of 44 samples exceeded drinking water criteria.
- A concentration of PFOA in 1 out of 44 samples exceeded freshwater (99 % species protection) criteria, with 7 out of 44 samples exceeding drinking water criteria.
- No other exceedances were identified.

The following **Table 5-2** presents a comparison between groundwater analytical results reported for the October / November 2024 and available historical data. The groundwater data has been presented with the available historical data in **Table C-4, Appendix C.**

**Table 5-2: Summary of Comparison with Historical Groundwater Data**

| Aspect | PFOA (µg/L) | PFOS (µg/L) | PFHxS+PFOS (µg/L) |
|---|---|---|---|
| First-time Detection<br>*(detection)* | MW034 *(0.01)*<br>MW042 *(0.02)* | MW538 *(0.02)* | None |
| First-time Ecological Criteria Exceedance<br>*(detection)* | none | MW538 *(0.02)* | None |
| First-time Human Health Exceedance<br>*(detection)* | None | None | None |
| New Historical Minimum<br>*(historical minimum / new minimum)* | MW020 *(0.06 / 0.02)*<br>MW048 *(0.03 / below LOR)*<br>MW049 *(0.16 / 0.02)*<br>MW536 *(0.08 / 0.06)*<br>MW537 *(0.02 / 0.01)*<br>MW539 *(0.04 / 0.02)* | MW020 *(1.1 / 0.46)*<br>MW048 *(1.5 / 0.75)*<br>MW049 *(3.15 / 0.56)*<br>MW536 *(0.94 / 0.66)*<br>MW537 *(0.18 / 0.07)* | MW020 *(3.25 / 0.67)*<br>MW048 *(2.34 / 0.81)*<br>MW049 *(4.83 / 0.91)*<br>MW536 *(1.56 / 1.14)*<br>MW537 *(0.44 / 0.21)*<br>MW538 *(0.05 / 0.03)*<br>MW539 *(4.26 / 3.1)* |

## 5.3 Surface Water

### 5.3.1 Surface Water Monitoring Access

The surface water monitoring locations were accessible during the sampling event, with exception of one sample location (SW033) which was inaccessible due to Base operations. A total of four locations were found to be dry (SW064, SW067, SW003, SW030).

### 5.3.2 Surface Water Field Parameters and Observations

The field parameters were recorded in-situ at the time of sampling. The surface water field parameters are presented in **Table B-3**, in **Appendix B**, with a summary of the field parameters presented in **Table 5-3** below.

The following presents a summary of observations recorded during sampling:

- An organic odour was recorded at eight monitoring locations (SW002, SW016, SW037, SW038, SW041, SW050, SW059 and SW090).
- A hydrocarbon odour was recorded at two monitoring locations (SW053 and SW048).
- A metallic odour was recorded at two monitoring locations (SW056, SW076).
- A solvent odour was recorded at two monitoring location (SW027 and SW051).
- No other visible or olfactory indications of contamination were observed during the sampling of the other surface water sampling locations.

Several pH and DO readings across the monitoring network differed greatly by comparison to previous monitoring events. These readings are considered to be anomalous and should be confirmed during future monitoring events.

**Table 5-3: Surface Water Field Parameters Summary**

| Unit | Parameter | Minimum | Maximum | Comment |
|---|---|---|---|---|
| On-Base drainage lines | DO (mg/L) | 0.46 | 9.56 | Poorly to well oxygenated |
| | EC (µs/cm) | 144.7 | 939.0 | Fresh |
| | Eh (MV) | 155.3 | 516.2 | Mildly reducing to strongly oxidising |
| | Temperature (°C) | 20.4 | 31.5 | - |
| | pH | 1.05 | 7.32 | Acidic to neutral |
| Warrill Creek | DO (mg/L) | 0.07 | 5.90 | Poorly to well oxygenated |
| | EC (µs/cm) | 410.1 | 855.0 | Fresh |
| | Eh (MV) | 274.6 | 437.2 | Moderately to strongly oxidising |
| | Temperature (°C) | 24.5 | 26.9 | - |
| | pH | 3.06 | 7.36 | Acidic to neutral |
| Bremer River | DO (mg/L) | 0.03 | 7.40 | Poorly to well oxygenated |
| | EC (µs/cm) | 3.5 | 822.0 | Fresh |

| Unit | Parameter | Minimum | Maximum | Comment |
|---|---|---|---|---|
| | Eh (MV) | -43.0 | 351.3 | Slightly reducing to moderately oxidising |
| | Temperature (°C) | 23.0 | 29.1 | - |
| | pH | 4.11 | 7.95 | Acidic to neutral |

### 5.3.3 Surface Water Analytical Results

The surface water analytical results have been compared against the adopted screening criteria, with the analytical results presented in **Table C-2**, **Appendix C**. Concentrations of Sum PFHxS+PFOS and PFOA have been shown on **Figure 11** and **Figure 12**. Based on review of analytical results:

- Concentrations of PFOS in 24 out of 44 samples exceeded freshwater (95 % species protection) criteria. In 34 out of 44 samples there was an exceedance of freshwater (99 % species protection) criteria.
- Concentrations of PFOA in 2 out of 44 samples exceeded drinking water criteria.
- Concentrations of PFOS+PFHxS in 27 out of 44 samples exceeded drinking water criteria.
- Concentrations of PFOS+PFHxS in 10 out of 44 samples exceeded recreational water criteria.
- No other exceedances were identified.

The following **Table 5-4** presents a comparison between surface water analytical results reported for the October / November 2024 and available historical data. The surface water data has been presented with the available historical data in **Table C-5** in **Appendix C**.

**Table 5-4: Summary of Comparison with Historical Surface Water Data**

| Aspect | PFOA (µg/L) | PFOS (µg/L) | PFHxS+PFOS (µg/L) |
|---|---|---|---|
| First-time Detection<br>*(detection)* | None | SW043 *(0.03)* | SW043 *(0.04)* |
| First-time Ecological Criteria Exceedance<br>*(detection)* | None | SW043 *(0.03)* | None |
| First-time Human Health Exceedance<br>*(detection)* | None | None | None |
| New Historical Minimum<br>*(historical minimum / new minimum)* | SW021 *(0.28 / 0.23)*<br>SW056 *(0.08 / 0.05)* | None | SW045 *(0.01 / below LOR)* |

|---|---|---|---|
| *(historical maximum / new maximum)* | | SW064 *(1.43 / 1.44)* | |

## 5.4 Sediment

### 5.4.1 Sediment Monitoring Access

The sediment monitoring locations were accessible during the sampling event, with the exception of two sample locations. Sediment monitoring location SD033 was inaccessible due to Base operations, whilst monitoring location SD040 was inaccessible due to unsafe access conditions.

### 5.4.2 Sediment Field Observations

No visible or olfactory indications of contamination were observed during the sediment sampling. Sediment logging is presented as **Table B-4**, **Appendix B**.

### 5.4.3 Sediment Analytical Results

The sediment analytical summary tables for the October / November 2024 monitoring event have been presented in **Table C-3**, with comparison against available historical data included in **Table C-6**, in **Appendix C**. Concentrations of Sum PFHxS+PFOS and PFOA have been shown on **Figure 13** and **Figure 14**.

The following **Table 5-5** presents a comparison between sediment analytical results reported for the October / November 2024 monitoring event and available historical data.

**Table 5-5: Summary of Comparison with Historical Sediment Data**

| Aspect | PFOA (mg/kg) | PFOS (mg/kg) | PFHxS+PFOS (mg/kg) |
|---|---|---|---|
| October / November 2024 | | | |
| First-time Detection<br>*(detection)* | SD018 *(0.0001)*<br>SD100 *(0.0001)* | None | None |

# 6. Conclusions

The OMP October / November 2024 sampling event was completed in general accordance with the SAQP. The observations, information and data collected as part of the sampling event have been documented in this SER and have been summarised in the table below.

**Table 6-1: Summary of October / November 2024 Sampling Event**

| Aspect | Detail |
|---|---|
| SAQP | This OMP round was completed in general accordance with the SAQP, with the exception of the deviations specified in **Section 2.2**, including:<br>• Five additional groundwater wells were sampled. These represented replacement wells installed in 2024.<br>• One monitoring well location (MW309) was not sampled due to a damaged gatic cover.<br>• Data logger retrieval not completed due to removal of data loggers.<br>• Five surface water monitoring locations not sampled, with four due to dry conditions and one location not sampled due to Base operations.<br>• Two sediment monitoring locations not sampled due to access restrictions (i.e. Base operations / unsafe conditions).<br>The deviations noted above are not considered to impact achieving the objective of the OMP, with the exception of MW309, where a damaged gatic cover meant that this location could not be sampled. This is considered to have a moderate impact on achieving the objective of the OMP due to the spatial coverage of the monitoring network being reduced within the central portion of the Base, particularly given the proximity to legacy contamination source areas. Notwithstanding, groundwater monitoring wells are located downgradient of the target source area. This should be considered in the update to the OMP, with repair of the damaged gatic cover recommended. |
| Screening Criteria | The PFAS screening criteria identified in **Section 3** were adopted in consideration of current guidance. |
| Groundwater Sampling Program | Access was obtained to all groundwater monitoring locations, with the exception of one well which could not be sampled due to a damaged gatic cover.<br>A total of 44 primary groundwater samples were collected. Concentrations of PFOS, Sum of PFOS+PFHxS, and PFOA were consistent with previous monitoring rounds, with the exception of:<br>• Two first time detections for PFOA and one for PFOS, including a first-time ecological exceedance.<br>• Three new maximums reported for PFOA, four for PFOS, and two for PFOS+PFHxS.<br>• Six new minimums for PFOA, five for PFOS, and seven for PFOS+PFHxS. |
| Surface Water Sampling Program | Access was obtained to all surface water monitoring locations, except for one location which could not be accessed due to Base activities. A total of four locations were identified to be dry.<br>A total of 44 primary surface water samples were collected. Concentrations of PFOS, Sum of PFOS+PFHxS, and PFOA were consistent with previous monitoring rounds, with the exception of: |

| Aspect | Detail |
|---|---|
| | • One first time detection for PFOS, including a first time ecological criteria exceedance, and one first time detection for Sum of PFOS+PFHxS.<br>• One new maximum for PFOA, five for PFOS, and four for Sum of PFOS+PFHxS.<br>• Two new minimums for PFOA and one for Sum of PFOS+PFHxS. |
| Sediment Sampling Program | Access was obtained to all sediment monitoring locations, except for one location which could not be accessed due to unsafe conditions and one location which could not be accessed due to Base activities.<br>A total of 47 primary sediment samples were collected. Concentrations of PFOS, Sum of PFOS+PFHxS, and PFOA were consistent with previous monitoring rounds, with the exception of:<br>• Two first time detections for PFOA.<br>• Three new maximums for PFOS and Sum of PFOS+PFHxS. |
| Next Scheduled Event | The next OMP sampling event is scheduled for April 2025. |

Notes
All Hydrasleeves™ were installed a minimum of 24 hours prior to sampling m - metres
m btoc - metres below top of casing
m AHD - metres above Australian Height Datum TOC - Top of Casing
DO - Dissolved Oxygen EC - Electrical Conductivity
Er - converted to Eh by adding 205 based on YSI with Ag/AgCl sensor calibrated to a 3.5 molar KCL solution
Eh - Corrected Oxidation Reduction Potential
` - no data
mg/L - milligrams per litre
µS/cm - microsiemens per centimetre mV - millivolts
°C - degrees Celsius
** - anomalous reading

Notes
DO - Dissolved Oxygen
EC - Electrical Conductivity
Er - Uncorrected Oxidation Reduction Potential Eh - Corrected Oxidation Reduction Potential
` - no data
Er converted to Eh by adding 205 based on a YSI with Ag/AgCl sensor calibrated to a 3.5 molar KCL solution mg/L - milligrams per litre
µS/cm - microsiemens per centimetre mV - millivolts
°C - degrees Celsius
*Insufficient sample volume to collect water quality parameters
** Anomalous reading

## TABLE B-4: Sediment Observations

| Location ID | Sample Date | Location | Sample Description | Odour | Notes on River Conditions |
|---|---|---|---|---|---|
| SD002 | 31/10/2024 | Drain | Clay, dark brown, trace silt, some roots, medium plasticity | No odour | Manmade drainage channel around 10m width, running west to east. Water is shallow, ~0.1m depth, pooled with aquatic plants. Long grass in channel. |
| SD003 | 31/10/2024 | Drain | Silty clay, dark brown, small amount of roots, low plasticity | No odour | Wide and deep drainage channel, draining north west from the airstrip. Around 40m width and 10m depth. Steep eroded bank to the south west. Heavily vegetated channel with grass, reeds and trees. Reenforced north east bank with large angular boulders. |
| SD004 | 8/11/2024 | Warrill Creek | Clay, brown and grey | No odour | Abundant woody debris in river channel. Eroded southern bank. Brown, flowing water, around 0.5m depth. Flowing west to east. Evidence of flooding (stacked debris). |
| SD005 | 8/11/2024 | Warrill Creek | Clay, brown/grey | No odour | Brown, flowing water (west to east). Appears to be around 0.5m maximum depth. Clear, brown water with fish present. Established riparian vegetation on north bank. Steep eroded southern bank with no riparian vegetation, followed by grassed floodplain to the south. Woody debris within river channel. |
| SD008 | 6/11/2024 | Drain | Clay, brown, damp, organics | No odour | Still, pooled water with gently sloping grassed banks. Reeds and grass within channel. Flows west to east. Maximum 1m depth. Maximum 5m width. |
| SD009 | 8/11/2024 | Warrill Creek | Sandy clay, brown | No odour | Flowing, west to east, slightly cloudy, brown water. Around 1m depth, and around 10m width. Vegetated sediment island within creek with established trees and grasses. Woody debris within channel. Fish present. Southern bank is steep and eroded with no vegetation. North bank is gradually sloping. |
| SD011 | 31/10/2024 | Drain | Clayey silt, dark brown, high organics, medium plasticity | No odour | Shallow, slowly flowing drainage channel. <40cm maximum depth. No riparian vegetation. Grassed banks. Cobble reenforcement of banks. Aquatic plants in drain. |
| SD015 | 7/11/2024 | Warrill Creek | Sandy clay, brown | No odour | Gently flowing west to east. Slightly cloudy water. ~0.3m depth. Heavily vegetated on north bank with established trees and native grasses. Gently sloping north bank. South bank is steep with visible erosion and less vegetation. |
| SD016 | 5/11/2024 | Warrill Creek | Clay, brown, medium plasticity, organics (incl. sticks, roots, algae) | No odour | Still, clear water, brown in colour. Established riparian vegetation on north bank. Woody debris within channel. Fish observed in creek. Rubbish filled embankment ~20m north consists of concrete slabs, construction material, steel debris. |
| SD018 | 6/11/2024 | Drain entering Warrill Creek | Sandy clay, brown, medium plasticity | No odour | Clear, gently flowing water W to E. Approximately 0.5m depth. Wood debris in river channel. Large angular cobbles in channel (~30 cm). Well vegetated on both banks. Creek bed contains native grass vegetation. Lots of rubbish observed, including bottles, concrete, metal, and asbestos. Construction rubble in creek channel. |
| SD020 | 6/11/2024 | Warrill Creek | Sandy, silty clay | No odour | Clear, still water. Heavily vegetated riparian banks to the north and south. Water gently flowing west to east. Water depth maximum 0.3m. Evidence of flooding (debris in trees). |
| SD021 | 1/11/2024 | Drain | Clayey gravel, medium gravel, black, angular (bitumen?), medium plasticity, grey/brown | No odour | Shallow, pooled, still water around 0.2m maximum depth. Thick grass and vegetation surrounding sample location. |
| SD025 | 12/11/2024 | Bremer River | Sandy silty clay, dark brown | No odour | Flooded due to high rainfall. Flow direction south to north evidenced by debris build up. Sparcely vegetated banks. Gradual sloping banks (<10°). |
| SD026 | 8/11/2024 | Warrill Creek | Clay, dark brown, organics | No odour | Still, pooled, deep water. Very narrow channel, around 2m width. Heavily vegetated banks with native grasses and well established trees. Steep banks. Woody debris within and across the channel. Flow direction south to north. |
| SD027 | 28/10/2024 | Drain | Silty clay, dark brown, medium plasticity, high organics, trace sands | No odour | Heavily modified creek bed. Vegetated with reeds and trees. Flow direction east to west. Manmade cobble embankment to the south. Grassed, eroding bank to the north. Not flowing, shallow around 0.3m. |
| SD028 | 7/11/2024 | Frogs Hollow Gully (Drain) | Sandy clay, brown | No odour | Pooled water channel with aquatic plants on the surface. Fish and tadpoles present. Long grass surrounding the channel (~1m high). No riparian vegetation. Relatively flat catchment (<5°) surrounding the channel. Water is black. Unable to see the bottom. Channel is ~ 2m width, and around 0.5m maximum depth. Appears to flow west to east. |
| SD030 | 28/10/2024 | Drain | Gravelly sandy clay, dark brown, medium plasticity, fine/coarse gravel, medium sands, high organics (incl. worms) | No odour | Drain beside road. Flat land surrounding. Manmade banks. No riparian vegetation. Grassed mown banks. |
| SD033 | 8/11/2024 | Drain | NOT COLLECTED (unsafe due to fire training drills at location) | No odour | - |
| SD034 | 6/11/2024 | Warrill Creek | Sandy clay, brown, medium plasticity | No odour | Still brown water ~0.3m depth. Heavily vegetated riparian zones on both banks. Native grasses within channel. Rubbish observed in northern bank, including porcelain, glass, and rubber. Narrow drainage channel entering creek from the north to south at sample location. |
| SD036 | 8/11/2024 | Bremer River | Sandy clay, brown, fine sands | No odour | Pooled deep water in channel. Unable to see the bottom. Large established gums and trees in channel. Aquatic plants covering entire surface. Western bank vegetated with grass and trees. Eastern bank is gently sloping, vegetated with native grasses. Channel is within a regeneration area. |
| SD037 | 31/10/2024 | Drain | Sandy silt, dark brown, root inclusions, low plasticity, fine sands | No odour | Minimal water <0.1m depth. Still, pooled, and stagnant water. Very shallow drainage channel with mown grassed banks. Tall reeds around 2m high within channel. Overgrown vegetation. |
| SD038 | 6/11/2024 | Drain | Silt with sand, dark brown, high organics | No odour | Still poolled water >1m depth, ~3m width. Appears to flow west to east (based on the gradient of the land). Large fish observed. Man made embankments with large angular cobble bank reenforcement. Water is clear with a brown/green colour. Aquatic plants on surface. Reeds on banks. Surrounded by open, mown, grassed area. |
| SD039 | 12/11/2024 | Bremer River | Clayey sand, light brown | No odour | Flooded due to high rainfall. Large subangular boulders and cobbles within channel. Creek bed is vegetated with reeds and grasses and well established trees. Flow direction is S to N evidenced by woody debris within the creek. |
| SD040 | 12/11/2024 | Bremer River | NOT COLLECTED (unsafe due to flooding) | No odour | Flooded, fast moving water due to high rainfall. Large, deep creek, with brown coloured water. Heavily vegetated banks on both sides. Well established trees and native grasses on both banks. Vegetated bank around 50m width on north side. Drainage channel entering the dam from the NW. Dead cow in water, upstream from sample. |
| SD041 | 5/11/2024 | Drain | Silty clay, dark brown, inclusions of dry reeds | No odour | Clear, black, pooled, still water. Maximum 0.3m depth. Channel is heavily vegetated with tall reeds. Large angular boulders within channel. |
| SD043 | 12/11/2024 | Warrill Creek | Clay, brown | No odour | Flooded due to high rainfall. Fast flowing water, flowing south to north. Banks are well vegetated. |
| SD045 | 12/11/2024 | Bremer River | Light brown sandy Clay. | No odour | Flooded due to high rainfall. Brown water, flowing west to east. Well vegetated banks on both sides with native grasses and trees.Gently sloping banks. Woody debris along banks. |
| SD047 | 18/11/2024 | Bremer River | Clay, grey/brown, non-plastic, saturated | No odour | Flooded due to high rainfall. Deep water. Steep bank on the western side. Well established gums and trees within the river channel. |
| SD048 | 28/10/2024 | Drain | Silty clay, dark brown, medium plasticity, organic matter (incl. worms), trace sands | No odour | Drainage leads from hangar to the north ~40m. Land slopes to the south west. Mowed grassed area. Minimal flow visible, man-made drainage channel (1.5m wide), shallow water (0.4m). |
| SD049 | 1/11/2024 | Drain | Clay, grey, trace silt, medium plasticity, some leaf litter | No odour | Large dam at the bottom of a grassy slope. Around 100m diameter. Deep, still, brown water. Aquatic reeds surrounding the banks. Ducks and fish present. Slopes gently from the east to the west. |
| SD050 | 4/11/2024 | Bremer River | Clayey silt, dark brown, high organics, low plasticity | No odour | 10m wide, 0.5m deep, very sharp banks, not man-made. |
| SD051 | 4/11/2024 | Bremer River | Silty clay, dark brown, organics, low plasticity, trace sands | No odour | Deep pooled, still water. Flow direction N to S evidenced by flood debris in trees. Very steep embankment. Channel around 5m width. Green scum covering entire surface. Woody debris within channel. Overland flow across embankments evident with rubbish (corrugated iron) running W to E. Heavily vegetated banks with native grasses, reeds, and trees. |
| SD052 | 18/11/2024 | Bremer River | Clay, brown, high organics | No odour | Flooded due to high rainfall. Woody debris in channel. Banks are heavily vegetated. Flow direction is W to E evidenced by flood debris in trees. Very steep banks. |
| SD053 | 5/11/2024 | Drain | Silt, dark brown, low plasticity, high organics (incl. green algae, roots), minimal sediment | No odour | Manmade drainage channel surrounding the runway. Water flowing south to north. Very shallow. Concrete base with 4 drains entering channel. Green algae in water. Clear. Very gently sloping mown grassed banks. |
| SD056 | 28/10/2024 | Drain | Silty clay, green/brown, high organics, medium plasticity | No odour | Flat surrounding land. Very gently sloping banks. Channel is around 2m maximum width. Depth around 0.5m max. Grassed mown banks. Reeds and aquatic plants within channel. Still, pooled water. |
| SD059 | 31/10/2024 | Drain | Clayey sand, dark brown, thick root inclusions, medium/coarse sand, medium plasticity clay | No odour | Disconnected pooled water, overgrown by reeds, 0.2m deep in pools max, channel not visible, no flow. Man made embankments with large angular cobble bank reenforcement. Surrounded by open, mown, grassed area. |
| SD064 | 5/11/2024 | Drain | Clay, dark brown, red mottles, medium plasticity | No odour | Very shallow, narrow drainage channel bordering the runway. Mown grassed area surrounding sample location. Dry during visit. |
| SD067 | 5/11/2024 | Drain | Clay, dark brown, stiff, dry | No odour | Small drainage channel. Concrete culvert contains dark green water. Culvert is covered with a grill. Very shallow channel. Mown grassed banks. Dry during visit. |
| SD076 | 28/10/2024 | Drain | Clay, green/brown, medium plasticity, rootlets, fine/medium sand | No odour | Flat surrounding land. Very shallow banks. Channel is around 10m width. Shallow water (0.4m) flowing E to W (~10cm). Channel vegetated with reeds around 1.5m high. |
| SD079 | 5/11/2024 | Drain | Sandy gravel with clay, dark brown | No odour | Manmade drainage channel bordering the runway. 2m high reeds in channel. Very tall reeds in channel. Green and brown algae in channel. No flow. Shallow. Around 0.4m depth. Very gently sloping mown grassed banks. |
| SD080 | 5/11/2024 | Drain | Sandy clay, dark brown, moist | No odour | Manmade drainage channel bordering the runway. 2m high reeds in channel. Sediment build up on the southern side of the culvert. Very gently sloping mown grassed banks. Small fish in channel. |
| SD088 | 18/11/2024 | Bremer River | Clay, grey, non-plastic, saturated | No odour | Flooded due to high rainfall. Deep, wide channel. Gently sloping vegetated banks. Woody debris within channel. Flow direction is west to east. |
| SD089 | 18/11/2024 | Bremer River | Clay, grey/brown, non-plastic, saturated | No odour | Flooded due to high rainfall. Woody debris across channel. Fallen trees across the banks. Flow direction is south to north evidenced by flood debris in trees. Very steep banks. |
| SD090 | 18/11/2024 | Bremer River | Clay, grey/brown, non-plastic, saturated | No odour | Flooded due to high rainfall. Deep water. Woody debris in channel. Banks are heavily vegetated. Flow direction is south to north evidenced by flood debris in trees. Very steep banks. |
| SD091 | 18/11/2024 | Bremer River | Clay, dark brown, non-plastic, saturated | No odour | Flooded due to high rainfall. Woody debris within creek channel. Fallen trees across channel. Heavily vegetated banks. Banks are fenced off for regeneration. Flow direction is south to north. Evidence of flooding with debris in trees and surrounding vegetation coated in sediment. Very steep banks. |
| SD094 | 8/11/2024 | Bremer River | Clay, dark brown | No odour | Shallow, pooled water in creek channel. Clear, brown. Large woody debris within channel. Vegetated banks. Steep easterly bank, gently sloping on the west. Western bank is a revegetation area. Flow direction is north to south, evidenced by flood debris within the channel. Drainage channel entering the creek from the northwest to southeast. Heavily eroded. |
| SD098 | 8/11/2024 | Bremer River | Clay, brown, organics | No odour | Still pooled water beneath bridge, ~0.5m depth. Clear, with a brown colour. Water flow north to south evidenced by debris build up within creek. Vegetated banks on both sides with native grass and trees. |
| SD099 | 6/11/2024 | Warrill Creek | Silty sand, brown, low plasticity, fine sands | No odour | Deep, wide channel. Brown, turbid water. Gently flowing south to north. Woody debris along banks. Grassed bank to the west. Vegetated with well established trees to the east. |
| SD100 | 6/11/2024 | Warrill Creek | Sandy clay, grey/brown, wet | No odour | Deep, narrow channel, gently flowing east to west. Clear, green/brown colour. Flood debris in trees and on banks. Very steep north bank. Long grass and vegetation on south bank. |
