4. Creation, Enhancement and Maintenance of Australian Industry Capabilities

GEASA's AIC Strategy is seeking to identify industrial candidates with the capability and interest to supply to Defence and adjacent sectors such as Industrial Gas Turbines, to enable cross-pollination and to leverage transferability of specialist equipment, capabilities and skills and create a commercial business case.

GEASA will:

- Engage and explore TAE Aerospace in commercial engine overhaul assessment and capability development that may lead to capabilities for the LM2500 ISSC Program if commercially viable.
- Engage and explore Asia Pacific Aerospace in defence engine overhaul assessment and capability development that may lead to capabilities for the LM2500 ISSC Program if commercially possible.

5. Future Work Opportunities

Since the LM 2500 is an aeroderivative of the CF6, GEASA sees value in exploring the Australian Market capabilities further in terms of component repair and future overhaul of the gas turbine and its components.

Current and future opportunities exist for Australian companies with new or emerging capabilities including those that align with specific opportunities identified in the list below.

- expand its in-country level of depot support beyond Level 2 intermediate-level maintenance profile, utilising current facilities and supplied GFE
- domestic in-country provider for Level 4 & 5 (depot and component-level) support if commercially viable

6. Market Engagement

GEASA will conduct continuous market scanning throughout the LM2500 ISSC execution.

GEASA will engage with potential suppliers for future work opportunities in the following manner:

- Advertising within the relevant industry or Defence media platforms such as the Australian Defence Magazine (ADM)
Trade show attendance such as but not limited to Indian Ocean Defence & Security Conference, Indopacific, DASA, ADF Propulsion Systems Symposium (APSS)
- Approached directly if already known to GEASA or part of an existing supply chain
- Recommendations from other suppliers in the field or from companies that GEASA has a working relationship with based on previous experience
- Engage with ODIS
- Internet searches

Potential suppliers are encouraged to reach out to the Snr. Program Manager:
